[illegible]n headquarters in Wash[illegible]t they resigned because [illegible]red with Mr. Hoover over

Gifford Pinchot.

the handling of the meat problem. Both contended that the packing industry should be taken over and operated by the government, and that the cotton seed crop be commandeered so that cotton seed meal cake could be sold to cattle growers at low prices.

The difference arose over a question of policy, not of law, for the food control law empowers the president, in his discretion, to take over and operate the packing plants. Section 12 provides:

"That whenever the president shall find it necessary to secure an adequate supply of necessaries for the support of the army or the maintenance of the navy, or for any other public use connected with the common defense, he is authorized to requisition and take over for use or operation by the government any factory, packing house, oil pipe lines, mine or other plant, or any part thereof, in or through which any necessaries are or may be manufactured, produced, prepared or mined, and to operate the same."

The president and Mr. Hoover believe that this drastic action should not be taken until an effort has been made to try milder means. Mr. Pinchot is convinced that milder remedies will not cure the evil and that valuable time would be saved by immediate application of the severer provisions of the law.

Apple Rules Stand

Grading Problem Is Complicated

So complicated are the conditions surrounding the problem of grading and packing apples that the apple conference at the National Apple show at Spokane last week threw up its hands and voted in favor of a two-pack system, instead of a three-pack, but declined to insist on having the two-pack system put into effect the coming season. The vote was taken by Washington apple men only, though the establishment of a new system of grading would influence the other states of the northwest to considerable extent.

The present rules in Washington provide for three grades of apples: The extra fancy, the fancy and the C grade. The objection is made to the C grade that it permits inferior fruit to be packed under that grade and shipped out of the state or otherwise placed on the market as good fruit, thus injuring the state's reputation as a producer of excellent apples.

Commissioner E. F. Benson of the Washington state department of agriculture said that the rules governing next season's packing would have to be promulgated next month, and that that made it virtually impossible to put a new set into effect, even if the growers were all of one mind as to the rules desired.

The conference voted 25 to 21 that it was the consensus of opinion among the growers present that a two-grade system was preferable to the present three-grade system, and that the federal government set the machinery in motion to put such new system into practice throughout the country as soon as possible. It was argued that a uniform system of rules for the entire country, at least the northwestern states, was greatly to be desired.

During the four days of the fruit growers' conference many subjects of vital import to the growers were taken up and discussions of them entered into. Such problems as pruning, intercropping, live stock for the orchard farm, thinning, packing, hauling and marketing were considered.

Buildings for Big Show Are Assured

The greatly needed stadium to house the Pacific International Live Stock show at Portland seemed assured after the annual banquet at the Portland hotel last Thursday night, when voluntary subscriptions were totaled, and it was found that $33,000, a purebred Shorthorn bull, two purebred pigs, a lease on the necessary grounds and other material contributions had been pledged. To complete the funds necessary a committee of leading Portland business men has been appointed to take further subscriptions. The largest single subscription reported at this time is that of the Portland Cattle Loan company of $5000. Several subscriptions of $1000 were made, and a large number of from $100 to $500.

Just the Paper.

To The Washington Farmer: We have taken The Washington Farmer about one year and would not be without it. Just the paper for Washington farmers.

P. J. ZWASCHKA.
Everson, Wash.

Prepare to Guard Food.

The city council of Spokane has passed an ordinance declaring that mills, warehouses, stores, packing plants and so on, in which cereals, flour, meats or other food products are kept or stored, when the value of such shall amount to $50,000 or upwards, shall maintain and keep a special watchman to guard such place during the night time and on Sundays, holidays and all other times when such place is not otherwise guarded. The city proposes to exercise strict supervision over the special officers, and Mayor Fleming states that he will detail a regular police officer to have supervision of the force of privately employed special officers.

Standardize Boxes

Apple Show Closes With Success

At a special conference of apple growers, shippers and box manufacturers in Spokane the last day of the National Apple show agreement was reached for the use of a standard box for all apples next season. The conference was called by Charles Hebbard, Washington state food commissioner under the national food administration, and the purpose was to eliminate the danger of a box shortage next year and to reduce the loss of efficiency in the manufacture as much as possible. The dimensions agreed upon are as follows:

Two ends, 11½ by 10½ by 11-15 inches; the ends may be in two pieces, with three corrugated staples at each [illegible]

Sides (two pieces), 19½ by 10½ by ¼ inches, solid.

Tops and bottoms (4 pieces), 19½ by 5¼ by 3-16 inches.

Cleats (4 pieces), 11½ by 11-16 by [illegible] in two or three [illegible]

Not more than 50 per cent of the sides may be tongued and grooved if 19½ by 10½.

Two-piece tops may be 19½ by 5¼ by 3-16 inches.

Three-piece tops may be 19½ by 3¾

The following exceptions will be permitted in cases of emergency:

Saturday brought the apple show to a close, and the record left is one of general success. The total attendance was slightly under that of a year ago, but the finances are expected to be shown in good condition when accounts [illegible]'s completed.

Excellent apples were on display, and those having them had no trouble in finding a market for them. A food conservation cooking school and the usual grading and packing demonstrations marked the show.

Dissolve Partnership.

The poultry firm of Westergaard & Saeman of Zenith, Wash., has been dissolved, Mr. Saeman taking over all of Mr. Westergaard's interests. Mr. Saeman was running the plant three years before he became associated

with Mr. Westergaard, having trapnested four years consistently. Since dissolving partnership, Mr. Saeman is enlarging his plant, one of the features being a new laying house 20 by 120 feet, which is shown in the accompanying cut. He is selling off his Barred Rocks and will confine himself to White Leghorns.

Naming Hindu Babies.

Hindu babies are named when they are 12 days old, and usually by the mother.

Miles of Meat Seen at Portland

Pacific Internaional Takes Place Among Greatest Shows of America

If the live stock at the seventh annual exposition of the Pacific International, held at Portland last week, were led in one single-file parade and allowed 10 feet per animal, the line would stretch nearly four miles. There were 2000 head of beef cattle, dairy cattle, sheep, hogs and horses, and this number and their quality place the Pacific International along side the Chicago International and the other greatest American shows.

It is fine to go to a show where there is neither gate keeper nor gate, and where everybody is welcome to come and see without money and without price; but it is impossible in such a case to say how many people came nor to form more than a rough estimate of the crowds as they compare with those of previous years. However, it is the confident statement of those who have attended the past shows that the crowds surpassed any of former times.

It was the first plan of the Portland Union Stock Yards company, under whose auspices the show is held, to show only fat stock and omit breeding classes. This aroused so much feeling that determined and successful efforts were made to show the purebred classes as well.

As a result the show was larger than that of any previous year. Perhaps the dairy divisions were lighter, taken as a whole, but the beef sections have never been so large nor has more quality been shown. The Shorthorns were a show by themselves and the other beef breeds were little behind. The hog show was all quality and the sheep, which it was feared might be light, were there in numbers and of quality representative of the importance of this branch of the industry and the excellence of the products of the northwest. The horse show was a feature by itself and attracted much comment.

Indicating the interest in live stock and their value as meat, the sales recorded excellent prices. Both breeding stock and fat animals sold well. Prices in the fat stock sold were as follows: Steers, 12 to 16.75 cents; wethers, 14 to 17 cents; hogs, 19 to 21 cents.

Special sales recorded higher prices, the steer donated to the Red Cross bringing 80 cents a pound, and the grand champion wether of the show, exhibited by the University of Idaho, bringing 35 cents.

While the Pacific International is primarily a beef cattle show, at which Shorthorns predominate and probably always will, it is also strong in other lines. It is a big hog and sheep show and its dairy department is by no means insignificant.

The Dairy Cattle Show.

This has been an exceptionally hard year for dairy breeders to get the help necessary on their farms, much less to fit cattle for showing, yet this show had one good herd each of Guernseys and Jerseys and no less than eight exhibitors showed Holsteins, though most of them had only small members on exhibition. Besides this the milking Shorthorns were represented with two nice herds and the Red Polled with one.

G. H. Dammeier, of Gresham, Ore., was the Jersey exhibitor. He showed mainly the same animals with which he won in a number of classes at the State fair. Noble Emperor, a son of Golden Fern's Noble, was showing in fine form and was made grand champion bull. Golden Fern's Noble Countess was preferred by the judge for grand champion over some excellent older cows.

The A. L. Gile herd of Guernseys was in good bloom and was a nice even herd throughout. Lucile of Chicona, a cow of very fine dairy type as well as a typical Guernsey, was given the honor of grand champion.

W. B. Ayer's Foothills farm showed a full herd of milking Shorthorns, and Alex Morrison a few. Mr. Morrison won junior championship on Little Bopeep, a very sweet senior heifer calf, carrying considerable flesh. The Ayer entry in that class was a little more leggy, but seemed more of a dairy type. Both herds showed in nice condition.

F. H. Porter's famous herd of Red Polled were the other dual purpose representatives. His good old cow, Pansy, that shows more dairy than beef type, and is a heavy milker, was made female champion as usual.

In the Holstein division competition was sharp in many classes. J. H. Hulbert's La Conner flats herd was in the best bloom and was the only full herd. His old bull, Segis Pontiac Acme, lost championship to C. S. Magee's two-year-old, Sir Nida Yamhill Wayne, but his offspring won both junior championships and the sweet heifer, La Conner Pontiac Grant, was given the grand champion honors. The Magee bull has a splendid front, with deep heart girth and good head, a straight top line, and promises to get still better as he grows older. Hulbert's champion cow had to be good to win over several that were shown, but opinion was well nigh unanimous that she was rightly placed.

DAIRY CATTLE.

The following are the awards in the dairy cattle division at the Pacific International:

Jerseys.

G. H. Dammeier, Gresham, Ore., the only exhibitor, received awards as follows: Bull, three years or over—first on Noble Emperor; senior bull calf—First on Viola's Jolly Jr.

Cow four years old or over—First on Noble Countess of Oakland; three-year-old—First on Oregon Martha Washington; two-year-old—First on Pear's Maid; senior yearing heifer—First and second on Golden Fern's Noble Countess and Seal Lad's Western Princess; junior yearling—First on Oregon Agatha; senior heifer calf—First on Dolly Turner; junior calf—First and second on Martha Tina and Duke's Noble Countess.

Senior and grand champion bull—Noble Emperor; junior champion bull—Viola's Jolly, Jr.; senior champion cow—Noble Countess of Oakland; junior and grand champion cow—Golden Fern's Noble Countess.

Exhibitor's young herd, breeder's young herd and calf herd—First on each. Produce of cow—First.

Guernseys.

A. L. Gile, Chinook, Wash., the only exhibitor, received awards as follows:

Bull, two years and under three—First on Eagle Bird of Edgemoor; yearling—First on Langwater Traveler; senior bull calf—First on Challenge of Edgemoor; junior calf—First and second on Chicona Ambassador and Chicona Beltemere.

Cow four years and over—First on Lucilla of Chicona; three-year-old—First on Algoma of Chicona; two-year-old—First and second on Daisy Bell of Chicona and Kulshan Hayes May Rose; senior yearling heifer—First and second on Lily of Chicona and Sunny Girl of Chicona; junior yearling—First on Merle of Chicona; senior heifer calf—First and second on Sylvia of Chicona and Rosemary of Chicona; junior calf—First and second on Blossom of Chicona and Linda of Chicona.

Senior champion bull—Eagle Bird of Edgemoor; junior and grand champion—Langwater Traveler. Senior and grand champion cow—Lucilla of Chicona; junior champion heifer—Sylvia of Chicona.

Aged herd, young herd and calf herd—First on each. Produce of cow and get of sire—First and second on each.

Holsteins.

Bull, 3 years or over—First, J. H. Hulbert, Mount Vernon, Wash., on Segis Pontiac Acme; second, E. Webb, New Plymouth, Idaho, on Woodrow Wilson Cornucopia; third, W. E. Boner, Joseph, Ore., on Calamity Nonesuch De Kol; fourth, C. H. Marsh, Molalla, Ore., on Pacific Prince DeKol; fifth, Fred A. Ballin, Linnton, Ore., on Sir Bessie Corona. Two-year-old—First, C. S. Magee, McMinnville, Ore., on Sir Nida Yamhill Wayne; second, J. H. Hulbert on Laconner Pontiac King. Yearling—First, J. H. Hulbert on Laconner Pontiac Hartog Lad; second, John Strucken, Portland, Ore., on Sir Bessie Aaggie Tuka. Senior bull calf—First, J. H. Hulbert on Laconner Pontiac Kimx. Junior calf—First, David McKeown, Gresham, Ore., on King Segis Lilith Walker; second and third, J. H. Hulbert on Laconner Pontiac Segis and Laconner Pontiac Sir Hartog; fourth, John Strucken on Sir Bessie Aaggie Fayne.

Cow, 4 years or over—First, David McKeown on Laura Netherland Jobanna. Three-year-old—First, C. S. Magee on Queen Nida Jewel Wayne; second, J. H. Hulbert on Mercedes Pontiac DeKol Elbadje; third, John Strucken on Aaggie Burke Quoque. Two-year-old—First, J. H. Hulbert on Laconner Pontiac Helene; second and fourth, C. S. Magee on Salem White Lady and Pauline DeSanders 3d; third, William McKeown, Gresham, Ore., on Belle Veeman Pauline Paul; fifth, John Strucken on Quoque Aaggie Tuka. Senior yearling heifer—First, J. H. Hulbert on Laconner Pontiac Beatrice; second and third, David McKeown on Countess Cantrillia Yukon and Blossom Veeman Lillith DeKol; fourth, C. S. Magee on Little Sadie Jewel. Junior yearling—First, J. H. Hulbert on Laconner Pontiac Bess; second, C. S. Magee on Nida Jewel Beryl Wayne; third, David McKeown on Lady Dora Johanna 2d. Senior heifer calf—First and second, J. H. Hulbert on Laconner Pontiac Winnie and Laconner Pontiac Netherland Girl; third, David McKeown on Beulah Veeman Segis Walker; fourth, C. S. Magee on Evaline Johanna Wayne DeKol; fifth, William McKeown on Segis Veeman Pauline Walker. Junior calf—First and third, J. H. Hulbert on Laconner Pontiac Grant and Laconner Pontiac Albina Gird; second, David McKeown on Dora Johanna Walker Matador.

Aged herd—First, J. H. Hulbert; second, C. S. Magee. Young herd—First, J. H. Hulbert; second, David McKeown. Calf herd—First, J. H. Hulbert. Produce of cow—First, C. S. Magee; second, J. H. Hulbert; third, David McKeown; fourth and fifth, John Strucken. Get of sire—First and second, J. H. Hulbert; third, C. S. Magee; fourth and fifth, David McKeown.

Senior champion bull—C. S. Magee on Cir Nida Yamhill Wayne. Junior champion bull—J. H. Hulbert on Laconner Pontiac Kim. Grand champion bull—Sir Nida Yamhill Wayne. Senior champion cow—J. H. Hulbert on Laconner Pontiac Helene. Junior champion heifer—J. H. Hulbert on Laconner Pontiac Grant. Grand champion female—Laconner Pontiac Grant.

Milking Shorthorns.

Bull, 3 years or over—First, W. B. Ayer, Foothills Farm, Carlton, Ore., on Imperial's Lad. Yearling—First and third, W. B. Ayer on Foothill Corporal and Foothill's Favorite; second, Alex Morrison, Valley, Wash., on Red Star. Senior bull calf—First and second, W. B. Ayer on Foothill's Conqueror and Foothill's Jester. Junior calf—First and second, W. B. Ayer, on Foothill's Archer and Foothill's Defender.

Cow, 4 years or over—First and second, W. B. Ayer, on Floretta Clay and Miss Audo. Three-year-old—First, W. B. Ayer on Silver Lassie. Two-year-old—First and second, W. B. Ayer on Glenside Rose and Glenside Daphne. Senior yearling heifer — First and second, W. B. Ayer, on Foothill's Daphne and Foothills Laura. Junior yearling—First, W. B. Ayer on Foothill's Mary. Senior heifer calf—First and second, Alex Morrison on Little Bopeep and Louise Folsom; third and fourth, W. B. Ayer on Foothill's Buttercup and Foothill's Jasmine. Junior calf—First and second, W. B. Ayer on Diamond Matrix and Foothill's Cyclamen.

Aged herd and calf herd—W. B. Ayer, first on each. Get of sire and produce of cow—W. B. Ayer, first on each.

Senior champion bull—W. B. Ayer on Imperial Lad, Junior champion bull—W. B. Ayer on Foothills Corporal. Grand champion bull—Imperial Lad. Senior champion cow—W. B. Ayer on Floretta Clay. Junior champion heifer—Alex. Morrison on Little Bopeep. Grand champion cow—Floretta Clay.

Red Polled.

F. H. Porter of Halsey, Ore., the only exhibitor, took awards as follows:

Bull, 2 years and under 3—First on Teddy's Cremo. Senior bull calf—First on Yakima Prince.

Cow, 3 years or over—First on Pansy. Cow, 2 years and under 3—First and second on Tacoma and Hortenetta. Senior yearling heifer—First on Helena. Junior yearling heifer—First on Julia. Senior heifer calf—First and second on Roseleaf and Lydia D. 7th. Junior heifer calf—First on Helena 2d.

Senior champion bull—Teddy's Cremo. Junior champion bull—Yakima Prince. Grand champion bull—Teddy's Cremo. Senior champion cow—Pansy. Junior champon cow—Helena. Grand champion cow—Pansy.

Aged herd, young herd and calf herd—First. Produce of cow—First and second. Get of sire—First and second.

THE HOG SHOW.

Decidedly the best hog show this exposition has ever had greeted the visitors. The hogs and sheep together occupied a tent but very little smaller than the immense stretch of canvas that housed the cattle. Poland Chinas were out in the largest numbers of both hogs and exhibitors, but competition was keen in the Duroc and Chester White breeds, with one partial herd of high quality Berkshires, and the one herd of Hampshires that has made the breed famous in the northwest.

For the first time Idaho met Oregon in Poland China competition, and Idaho's sons gave a good account of themselves. Never was better quality shown here. Howard and Royston, part of their hogs shown in partnership and part separately, were the heaviest winners. It was my desire to see their great boar Sammy meet Ray Fox's Ike Know, that has had two seasons of grand championship winnings, while the Idaho boar has been champion of five shows this year, but Ike Know was not there, and Sammy's place at the top was easy. A. L. Wilson, another Idaho exhibitor, won grand championship on sow. R. W. Hogg won junior champion honors on boar and Royston on sow, while awards were well divided, with Fox and Herbert Willard each winning a good share.

Durocs did not have so many exhibitors, but the show was of very high quality. Robert Nelson of North Yakima, Wash., was the largest exhibitor and heaviest winner, although the Coffin herd, with G. J. Harvey as manager, won junior championship, and, with not many shown, took several blues, and Doerfler brothers and C. S. Magee each got a share.

The Chester Whites also furnished strong competition. Ed Schoel was the largest exhibitor, but the Badger farm and E. E. Brown each had a creditable exhibit, and divided the awards.

Earl Wood was the sole Berkshire exhibitor. His hogs were well fitted, and showed much of quality.

J. M. Fruitt s Hampshires with their odd markings, but with quality equal to the best of any breed, completed this great hog show, and did its full part to make the show great.

The following are the hog awards:

Poland China.

Boar, 2 years old—First, Herbert Willard, Dayton, Ore., on Sky Pilot; second, Frank E. Wray, Silverton, Ore., on Dixie's Jack. Senior yearling boar—First, Howard & Royston, Parma, Idaho, on Sammy; second, Ray J. Fox, Lyons, Ore., on Fox's Model. Junior yearling boar—First, Wilson Bros., Greenleaf, Idaho, on A. Wonder Jr. Senior boar pig—First, Wilson Bros., on Big Bone Wonder; second, Herbert Willard, on Pilot's Model. Junior boar pig—First and second, R. W. Hogg, Salem, Ore., on Silky's Rose and Meddler Rose; third, Frank Denison, Lyons, Ore., on Black Face; fourth and fifth, J. M. Royston estate, on Hobo Sam and Ramblin' Sam.

Sow, 2 years or over—First, Wilson Bros., on Belle Beauty; second, Herbert Willard, on Black Butterfly; third and fourth, R. W. Hogg, on F. M.'s Darkness and Miss H. C. Perfection. Senior yearling sow—First, second and third, Royston estate, on Silver Bell, Lady Roswell and Payette Maid; fourth, Howard & Royston, on Hannah Big Mollie. Junior yearling sow—First, Herbert Willard on Pomona. Senior sow pig—First, Royston estate, on Lady Wonder; second, Herbert Willard, on Pilot Girl; third, R. W. Hogg, on Lily Sunshine; fourth, Ray J. Fox, on Miss Ike Fox; fifth, W. F. Howard, Parma, Idaho, on Clover Blossom. Junior sow pig—First, R. W. Hogg, on Daisy; second, Herbert Willard, on Pilot's Gem; third, fourth and fifth, Royston estate, on Josie, Perfect Belle and Josie 2d.

Senior champion boar—Howard & Royston, on Sammy. Junior champion boar—R. W. Hogg, on Silky's Rose. Grand champion boar—Sammy. Senior champion sow—Wilson Bros., on Belle Beauty. Junior champion sow—Roy-

(Continued on page twenty-seven.)

Question of Drainage

By CARL J. MENZE.

In comparing different farms in the same neighborhood, drained and undrained, from planting to harvesting time, one can note remarkable results on the value of proper drainage of farm lands in localities where there is a heavy rainfall.

It is evident that soils that are drained can be worked earlier in the spring, thus getting the soil in proper shape and the crop planted in time. If the soil is drained there is not much danger of the crop drowning out if there is a wet period after planting time. There were many poor crops caused by this last spring. During the summer time drained soils that have been properly worked outherwise can better withstand a drouth. Soils that are not drained are sour, and sometimes the water stagnates on them in the winter time. They can not be worked so early, are cold and wet, and the soil seems dead. In the summer time they bake and the ground is full of large cracks, and when it is cultivated it breaks into large clods thus preventing capillary attraction.

If the soil is not drained, and it is rolling or hilly, after a heavy rain the water will wash away valuable fertility elements, and after a few heavy rains the top of the hills will be barren.

Observations show conclusively that good drainage is a subject that should be given much attention in successful farm management.

Violets.

Violets are natives to nearly all lands and thrive very generally everywhere, the greater number in the shade, but some in the sun.

Live Stock Needed on Fruit Farm

Will Add to Rather Than Detract From Stability of Fruit Industry

Dairy cows, pigs and poultry have a place on the fruit farms of the northwest. The Farmer is glad to publish the accompanying address on the subject of "Live Stock and the Orchard" at the fruit growers' conference during the National Apple show at Spokane this week.—Editor.

By E. J. IDDINGS

There has been in western agricultural practice a strong tendency for several years toward specialization. In so far as this has meant for more intensive methods and for greater intelligence and skill devoted to the production of special crops or special farm products the movement has been worthy of high commendation. Weaknesses have been found in the system, however, and the trend of today is away from extreme specialization and toward diversification in the handling of the western agricultural farm holdings.

A fundamental difficulty for the man of limited means in any plan of high specialization is that he does not, and probably can not, afford to prepare himself for a season of loss. It is not always entirely well with a specialty. Whether it is with the cereals, or the forage crops of the field, or the crops of the orchard, there comes a season when conditions are unfavorable and the income is small. With the fruit grower, furthermore, there may be the problem of the orchard not yet in bearing, and diversification offers at least part solution for the problem of maintaining the family until the orchard is of bearing age. Diversification, therefore, does not run counter to the best interests of the fruit grower, but, on the other hand, assists in increasing his income and in staving over certain periods when the orchard is young, or when for some reason it does not yield in abundance. A modern slogan that is now quite popular in the agricultural field is the warning not to put all the eggs in one basket.

There are four direct reasons why the orchardist should be able to find a use for live stock in connection with his main business, which is that of fruit production. In the first place the live stock furnishes an additional source of income by furnishing animal products for home consumption. Second, live stock may be made to furnish a market for many of the crops grown by the orchardist between the rows of trees. Some of the crops, such as legumes, corn, grains of various kinds, can, as a rule, be most profitably marketed through live stock. Third, the orchardist needs live stock for the purpose of maintaining soil fertility. We find that more and more fruit men are giving consideration to the question of fertilization, and we all recognize that one of the cheapest and most efficient means of maintaining the soil in the best possible physical condition for maximum production is through the use of farm manures secured through live stock keeping. There is a fourth reason why the orchardist should at this particular time think seriously of live stock production. This is because the leaders of the American government today are calling for more animals and more animal products. The larger share by far of the needs of the nation in this direction will, of course, be taken care of on the ranges and on the farms. The fruit grower, however, can aid materially in this direction, and if a few head of live stock were kept on the average fruit farm of the west the sum total would be of real assistance in meeting the present day needs of America.

Granted that live stock keeping is feasible we may immediately consider the kinds of live stock that are best adapted to the fruit farm. A few horses will always be kept, but many orchardists question the advisability of trying to breed horses in connection wth an orchard plant. Beef cattle are produced most successfully and profitably where there is ample room and cheap grass. In a similar way sheep have in past years been regarded as better adapted to cheaper lands that are devoted largely to grazing purposes. In the last two or three years, however, hundreds of small flocks of sheep have been bought by the farmer, and it will only be a short time, if the present tendency prevails, when sheep on the western farms will be as common as they have been for years on the farms of Ohio and Indiana. There is a possibility of using a small band of sheep in connection with the orchard. For the average man engaged in fruit growing, however, the dairy cow and the brood sow lend themselves better to his needs. These two classes of animals fit well together on the farm, and make a splendid combination for use in connection with the orchard.

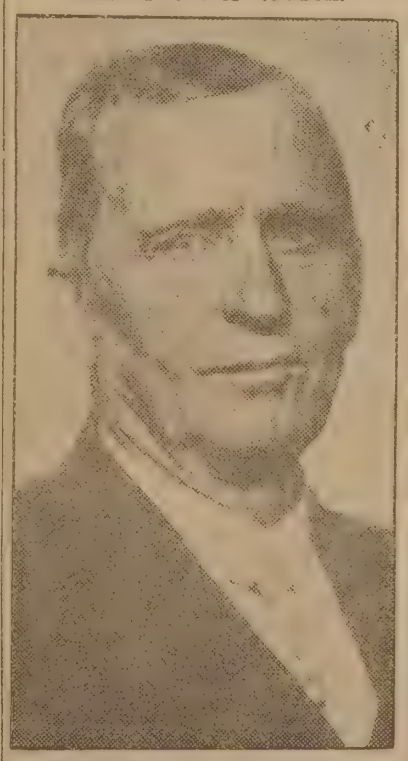
Those who are keeping in touch with dairy conditions of today feel that the time is not far distant when dairymen are to be paid well for their work in producing milk and butter fat. Prices have not been adequate, and the dairyman has been losing money for months. The result has been the selling of a large number of dairy cattle, and we will unquestionably soon be face to face with a condition in regard to milk and butter fat production that will mean one of two things—the dairyman will be well paid or the consumer will do without dairy products. I am familiar with one of the well-known irrigated districts of the west where many of the farmers have made a specialty of dairying. Two of the very best herds of that tract that have been tested and have a wide reputation for high production are now offered for sale. When the best dairymen are thinking of quitting the business it is well for us to think seriously of the future. It is my opinion, confirmed by many experienced men with whom I have talked, that now is a mighty good time to get into the dairy business. Good cattle are being sold in many sections at quite reasonable prices, and, as before indicated, there can be no other outcome than such prices for dairy products of all kinds as will enable the dairyman to meet all costs of keeping the herd and have a reasonable profit for his efforts.

In the orchard may be produced corn, peas and oats, and other crops for silage. The production of legume hays such as clover and alfalfa fit in well with the fertilization of the orchard, and give the orchard dairyman the very best roughages for milk production. If the silo is not advisable, root crops can be grown between the tree rows to wonderful advantage. Grains may be purchased or may be grown in connection with the orchard. The combination of legume hay for roughage, of either silage or root crop for succulence, and of our western grown grains for concentrates gives exactly the right kind of ration for heavy milk and butter fat production. The grains that are needed are barley and oats, in addition to bran, which is now one of the relatively cheapest feeds that can be bought in the market.

The dairy cow, therefore, fits in with the orchard plan for between-the-row crops, and not only furnishes the family with highly nutritious foodstuffs, but, in addition, gives the fruit grower a week by week or month by month cash income to supplement the income from fruit production.

Swine fit in well with dairy cattle because one of the best of all feeds for growing pigs is the skimmed milk, which on many farms is a byproduct of the dary business. Fundamentals in successful swine production are pasture for the brood sow and pigs; by-products such as from the dairy for supplementing other rations and for keeping down cost of production, and concentrates for finishing swine for market. All of these feeds, to a limited extent at least, can be produced in connection with the fruit farm. The pasture could be legume pasture, either alfalfa or clover. In addition special between the row crops, such as peas and oats, rape, kale and other crops of a similar nature, can be seeded for hog pasture. Skimmed milk, unsalable fruit and wastes from the household may be used in connection with swine feeding. In addition, there will be needed concentrates for fleshing swine for market. At present prices of feed stuffs, shorts and barley are probably the most economical feed to use in swine feeding. A nitrogenous supplement should be fed in addition, and tankage, skimmed milk or alfalfa hay are feeds valuable in this connection.

There are a large number of questions of breeding, feeding and management that should be considered in connection with dairy cattle and swine for the orchard. Time, however, does not permit extensive treatment of these problems. It is not only true that dairy cattle and swine are best fitted of the farm animals for use in connection with the orchard, but, in addition, it is peculiarly appropriate that these animals be bred at this particular time, since of all the animals of the farm, the dairy cow is most efficient, in that she provides more human food from 100 pounds of feed, through her milk, than can be obtained through the means of any other animal product. Swine rank second in efficiency to the dairy cow.



There is one other branch of the live stock industry that should be mentioned at this time. It will not be dwelt upon at length, since, in all probability, special consideration will be given during this week to this, one of the greatest industries of the American farmer. I refer to poultry raising. Poultry should not only be part of the general plan on the fruit farm, but, in addition, should be kept on every American farm. It is rather unfortunate that we find grain farmers as well as fruit growers going to the butcher or the groceryman for poultry that ought to be produced at home. Poultry on the fruit farm will not only furnish the family with foodstuffs among the most nutritious of all that are available for human consumption, but, in addition, if properly handled, can be made to yield during the year no inconsiderable income.

The great fruit industry of the northwest will lose nothing of its importance as a highly organized specialty, but, on the other hand, will be strengthened and rendered more stable and permanent by the adoption of diversification to the extent of live stock keeping along the lines suggested above.

Pass It On.

When you have finished reading this paper please hand it to a neighbor who may be interested in the saving in subscription price resulting from the elimination of the middleman.

Master Oliver Wilson.

Oliver Wilson of Peoria, Ill., whose photograph is shown above, was reelected master of the National Grange, Patrons of Husbandry, at the national convention at St. Louis last week.

Spillman Is Coming

To BeW.S.C. Dean of Agriculture

(Continued from page one.)

and problems. In 1902 he was called into the service of the federal department of agriculture, and there created the branch known as the department of farm management. He was one of the first agricultural experts to recommend the county agricultural agent plan and is sometimes called the father of that system. He is also well known as one of the three rediscoverers of Mendel's law of heredity, which is the basis for practically all the wonderful development of live stock breeding in recent years. The original discoverer of this law died without having given expression to it. Three scientists, one of England, one of Holland and Professor Spillman the other, rediscovered and worked it out almost simultaneously, but without the knowledge of the others.

Already the state college has done great things for the agricultural industry of Washington, and the coming of Professor Spillman promises a new era of development for the farms of the state.

The American Wheat Situation in Brief

We raised this year 1,000,000,000 bushels more of grain and foodstuffs than we raised last year.

Last year we had nearly 1,400,000,000 bushels less grain than we had the year before.

This year's wheat yield is 150,000,000 bushels less than the average yield of last five years.

It is 88,000,000 bushels short of the yield of 1901, or 16 years ago, when we had 25,000,000 or 30,000,000 people less than we have today.

We Have 15,000,000 fewer sheep than we had 14 years ago. We have 8,500,000 fewer head of beef cattle than we had in 1900.

Department of agriculture reported a few weeks ago that there was a decline in the last 12 months of 5,400,000 in the number of hogs.

Aggregate production of wheat and corn for 1916 and 1917, 490,000,000 bushels short of the aggregate production of the two preceding years.

Farm Loans Popular

Farmers Ask for Stupendous Sum

(Continued from page one.)

are further secured by all of the assets of all of the twelve federal land banks. These bonds are being offered to the public at the rate of approximately $3,000,000 per week. The money derived from their sale is loaned to farmers at 5 per cent, the margin of one-half per cent being employed to pay the expenses of the federal land banks.

The volume of business up to November 1 divided by federal land bank districts is as follows:

Federal land bank.	Applications.	Loans closed.
Springfield	$ 4,646,188	$ 304,065
Baltimore	7,567,918	1,193,950
Columbia	19,768,800	629,280
Louisville	12,697,477	1,391,900
New Orleans	13,753,037	1,121,516
St. Louis	8,969,980	882,515
St. Paul	20,364,000	2,726,200
Omaha	14,947,360	1,093,790
Wichita	23,394,049	5,869,700
Houston	19,167,223	729,433
Berkeley	19,210,139	1,248,200
Spokane	28,764,774	3,849,590

The business of the Spokane bank was distributed as follows:

	Applications.	Loans closed.
Idaho	$ 3,718,188	$ 549,595
Montana	9,660,919	1,158,270
Oregon	6,340,778	882,650
Washington	9,044,889	1,259,075

Coming Events.

Washington Irrigation Institute, North Yakima, Dec. 10-11.

Washington State Grain Growers', Shippers' and Millers' association, Pullman, Jan. 3-5.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Work, But Not All the Time

There is no place in any legitimate industry for much idleness. On the farm there is perhaps less room for it than in any other line of business, and it is a fact no well informed person will attempt to deny that farmers are the hardest working people on earth.

But too much of anything is too much. Farmers should work, but not all the time. One of the greatest needs in farm life is recreation, and the farmer is not a genuine success who does not secure a reasonable amount of it, even though he accumulates rich acres and good buildings and a good bank account.

The hours of farm work should be shortened except in special seasons, such as seed time and harvest. Eight hours a day in the city is recognized as enough. Perhaps it isn't, but 16 hours a day is too much. In 12 hours any man can use up as much energy as he can recreate in the other 12 of the day. Some men can do more work in six hours than some others can, or will do, in twice that many. When we speak of shortening hours of labor, it should always be with the man in mind who works while he works. Any intelligent man knows when he has done a day's work, and when he has, except in cases of something little short of an emergency, he should declare his day done and allow his mind and body to rest. That rest may be total relaxation, or another form of exercise, but it is essential if the best is to be obtained from life.

Harvest Festival in Church

The Rev. H. E. Greening, pastor of the Methodist church at Kelso, has been studying the community problem in his field for some time. This fall he decided to try to connect the church with the community through a harvest home festival. With the able assistance of County Agriculturist Keyes he secured a number of splendid speakers, and established an excellent display of products from the people in and around Kelso. The potatoes shown were particularly fine.

The festival opened the evening of November 7, and closed Sunday evening, November 11. During that time Hon. Clark V. Savidge, state land commissioner; H. L. Blanchard, assistant superintendent of the western Washington experiment station at Puyallup; Professor Theodore H. Scheffer of the United States biological survey and other prominent men addressed the gatherings at the church.

"It has long been my belief that the scope of the work of the church has been too limited," said Mr. Greening. "The work of the church in a community is the work of every man and woman in the community. Better business, cleaner amusements, more efficiency everywhere, better schools, better farming, more poultry, a higher citizenship—these are problems of the community and the problems which the church must help solve."

Mr. Greening is much encouraged over the response to his efforts.

The Keynote in the Dairy Problem

Commissioner John J. Dillon of the New York state department of foods and markets struck the keynote in the dairy problem when he declared the other day that too much attention is paid by the public to suggestions to reduce the price paid farmers for milk, and not enough to the question of reducing the cost of distribution.

> "You can pay the farmer the price he is asking for milk for the month of November and deliver it, pasteurized, in bottles to families in this city through the stores at 15c a quart for grade 'B' and 13c a quart for grade 'A.' The strange thing about it is that no one engaged in the numerous conferences which are being held in this city suggests that the big milk dealers supply this necessary to the stores and secure the distribution of it to the people at these prices. The only suggestion that seems to emanate from these conferences is to reduce the price paid to the farmer. There is no suggestion to reduce the excessive and extravagant cost of distribution."

Yet all authoritative and distinterested testimony is substantially agreed that the milk producers of the United States have long been underpaid, and the industry has only been maintained by the producers and their families working overtime, by night and by day, on Sundays and holidays, for scanty wages and often for no wages at all.

If the dairy industry were conducted as other industries are run—that is, with an eight or ten hour day, and fair wages for all engaged—the consumers would have to pay a good deal more than they are now paying for milk.

The big distributors found out that fact long ago, and to save themselves got out of the producing end of the business and confined themselves to the more lucrative business of distributing the product.

What a Spectacle!

Trust the average congressman to look out for No. 1.

The new income tax law imposes a special 8 per cent tax on salary and professional incomes in excess of $6000 per year. This bears especially on doctors, lawyers, architects and all salaried men earning more than $6000.

For example, if a doctor earns $7000 per year, he will pay, in addition to the regular income tax, an extra 8 per cent on the $1000 that his $7000 salary runs in excess of $6000.

The Farmer has no objection to that provision of the law. In fact, it thinks the tax is just.

What it does object to is the exemption of congressional salaries from the provisions of this special tax. Senators and representatives are paid a salary of $7500 per year. They are given an outrageous traveling allowance of 20 cents per mile, and have other "perquisites," like an unnecessarily excessive allowance for stationery. In one way and another the congressmen from the Pacific coast draw about $10,000 annually out of the government.

But they voted themselves an exemption from the 8 per cent income tax.

And what is their "explanation"? It will make you smile. Here it is, as expounded by Claude Kitchin, chairman of the ways and means committee of the house:

That there is a difference in principle in levying an excess profits tax on the business, trade, profession or occupation organized or carried on for private profits from levying such a tax on the salary of an office established and conducted for government purposes—the service going to the benefit of the government, of the public.

As to whether these services are beneficial in all cases to the public there is wide room for doubt. But there can be no question that the salary in every instance is for the benefit of the senator or congressman, and it is the salary, not the services, that is freed from the tax. The member, not the public, receives all the benefits there.

What a spectacle of high official tax-dodging, and what a shifty, tricky, gauzy excuse!

Washington Gleanings

Pupils of the Wenatchee schools earned $28,766 in cash helping with the apple harvest during the four weeks vacation granted for the purpose.

Dairy husbandry is the latest course to be added to the correspondence course curriculum of the extension service of Washington State college.

M. L. Dean, state commissioner of horticulture, advises apple growers to secure storage for their fruit and hold it as apples are certain to bring good prices throughout the coming year.

A third sugar-beet factory for the Yakima valley to be built in Sunnyside is almost a certainty. The first near North Yakima has been turning out from 1000 to 1500 bags daily for three weeks.

J. H. Blane sold a 28-acre tract just west of Palouse known as the Swanson place, to A. Diebel for $4400. Mr. Blane in turn bought the W. A. Linn farm of 93 acres two miles northwest of Palouse for $9000.

Superintendent C. E. Beach of Olympia city schools says that the children and teachers are enthusiastic over the plan to dry fruit for the allies, and some people outside the schools have offered fruit for the purpose.

During the quarter ending September 30, according to the reports filed with C. W. Clausen, state auditor, no less than 890 wild animals were killed in the various counties on which bounties amounting to $2217 were paid.

According to figures given out by the state commissioner of agriculture the North Yakima state fair fund has a balance on hand of $25,358 out of the appropriation of $28,880 made by the last legislature for the biennium.

John R. Holmes of Seattle has purchased the Fischer Brothers alfalfa ranch on the north side of the Columbia above Wahluke. The ranch consists of 120 acres, about 40 acres of which is seeded to alfalfa. The consideration was $20,000.

The Carnation Milk Products company of Seattle has been notified that its herd of purebred Holsteins sent to the National Dairy show at Columbus, Ohio, had taken ribbons in every class in which there had been entries. In all, the herd captured 22 ribbons.

Field Manager B. F. Brown of the Associated Fruit and Vegetable Growers estimates Walla Walla's 1917 apple crop at 650 cars. This will make 1917 the heaviest year for apple production that the valley has seen, being 50 per cent larger than last season.

Smut will be discussed by the farmers of Whitman, Spokane, Asotin and Lincoln counties in community meetings to be arranged by the division of plant pathology of the United States department of agriculture, in cooperation with the State College of Washington.

What Others Say

Monitor, Monroe: In classic days it was the cakling of a flock of geese that saved Rome; who can tell that a drove of squealing hogs will not save the allies?

Review, Toppenish: Altogether the coming of the sugar beet bids fair to prove of the utmost benefit to the valley farmers. A new industry has been added to the list of income producers, and the fact that a staple and inexhaustible market is provided for the crop is a consideration of utmost importance.

News, Bremerton: The boy or girl who raises a pig, in the backyard, if necessary, on table refuse and other odds and ends of the place, and sends that pig to soldiers on the front line of democracy's defense, or provides it for home consumption, is in a very adequate way taking the place of a man on the battlefield.

Mason County Courier, Shelton: There is only one immediate solution to our short supply of meat for export, pending the increase in our herds and flocks, which will take years. During the course of the war, we can, just as with cereals, reduce the consumption and eliminate the waste, particularly among those classes which can best afford it. In the meantime, in order to protect all of our people, we must carefully control our meat exports in order that the people shall not be denied this prime necessity of life.

Meat Packers Should Be Curbed

Farmers Would Respond With Increased Production of Meat Animals

There is much reason and justice in this letter from Joe Shelby of Colfax:

"The government has set a minimum of 15½ cents on hogs. The packers were paying 17 cents at the time, but immediately hogs dropped to 15 cents here. But meat still sells at 38 to 50 cents per pound. I can't see where it will stimulate production to see yourself losing money and the other fellow reaping a harvest. When feed was $20 to $25 per ton and hogs were 7 to 10 cents, you got some return for your effort, but with feed two and one-half times as high and hogs only ½ cent higher, it does not look stimulating to me. When hogs were 10 cents there was a difference of 17 cents between the hog and the raised product, but now there is a difference of 30 cents. The middlemen claim an advance of one-third in their expenses. We will concede that, but the same with the farmer, and their feed is two and one-half times higher. But they proceed to name the farmer a price only one-half of the extra cost, while the other fellow's price is two times the extra cost."

Unless the government holds the packers down to moderate profits great dissatisfaction will develop in the minds of producers and consumers. But the government promises to curb the packers and there is every reason to believe that it is in earnest.

Joseph P. Cotton of Chicago, meat and packing house controller for Mr. Hoover, is convinced that the present profits of the packing houses can be cut a possible 50 per cent without material damage to their business, and bases that belief on information gained by his experts, who have been going over the books of the big Chicago packers for more than a month.

We think the spirit of the producers generally is well expressed in these remarks from the report of the commission appointed by Food Administrator Hoover to determine the cost of hog production, in terms of bushels of corn, and to advise the government as to what is needed to stimulate hog raising in the United States:

"We believe that the sentiment of the swine producer is overwhelmingly opposed to any unjust profiteering arrangement that will be hurtful to the great rank and file of consuming interests. And, further, that all the producer asks is a sensibly sound, economic arrangement that he may secure for his efforts expended in the production of pork simply the cost of production plus a fair profit. In other words, a price for his hogs that shall meet our president's definition of a just price."

The report of this able commission continues:

"There is a big tendency to market potential breeding stock—breeding stock that is essential to further increase. The feeling of unrest and uncertainty on the part of the producer is greatly accentuated by the recent marked drop in price of live hogs. First and above all, confidence should be instilled so that producers will feel that when their hogs are finished for market they will sell at a fair price—at least sufficient to cover the actual cost of production and a fair profi.

"While hog production for the 10 years ended with 1916 has been maintained on a ratio of 11.67 bushels of corn to 100 pounds of hog, we believe, when all the losses are taken in account, that it is doubtful whether there has been a profit on the business with this ratio on the average.

"The normal number of hogs in the United States is approximately 65,000,000, as contrasted with the present supply of not more than 60,000,000. To bring swine production back to normal the commission believes that it will require a stimulative market which will pay at least the equivalent value of 13.3 bushels of corn for 100 pounds of average hog.

"We further believe that the equivalent value of at least 14.2 bushels of corn must be paid for 100 pounds of average hog in order that production may be stimulated 15 per cent above the normal.

"The best emergency method of stabilizing the market and preventing the premature marketing of light, unfinished pigs and breeding stock, we firmly believe, is to establish immediately a minimum price for good to select butcher hogs of $16 per hundred pounds on the Chicago market. For the purpose of immediately stimulating production of swine for the next year we recommend that a ratio be immediately established and announced at once, to go into effect February 1, 1918.

"Steps should also be taken to prevent, as far as possible, any large or sudden change in prices when they go from the minimum basis to the ratio basis. This minimum price should also apply to other markets and to other classes of market hogs with the usual or normal differentials.

"We recommend that the question of price range between the various market classes and grades of hogs should be determined by a suitable committee of representative packers, live stock commission men and representatives of this commission, the same to be appointed by Mr. Hoover."

Community Fair Held at Church

First One South Bend Has Had for Nineteen Years

By MRS. WINNIFRED BUCKINGHAM.

The community fair at the Congregational church of South Bend, Wash., was a complete success. The weather was ideal and the attendance large and enthusiastic. This has been the first agricultural fair in this city since 1898. The idea was put into shape by the county agriculturist, George C. Nelson. The premium list was divided into three classes, agriculture, home economics and manual training, and poultry and rabbits. In the agricultural class there were displays of vegetables, fruit and flowers. The youngest exhibitor was a boy 9 years old, who raised a pumpkin, and the oldest was a man, 93, who raised the best cabbage.

The judges were Mrs. Egbert, Misses Deach and Phail, and Messrs. W. E. Edwards, R. E. Schenk and I. A. Johnson, all of South Bend, and E. W. Lilly of Mento, who awarded prizes and ribbons to the following:

Agricultural Class.

E. A. Seaborg, Frank Nettleton, Kenneth Eichener, William Amlaw, John Walters, Mrs. Anna Gant, Mrs. Loveless, L. W. Homan, E. N. Somers, Mrs. E. N. Somers, Mrs. A. C. Ackley, Fred Eichner.

Domestic Science; Manual Training.

Mrs. Otto Roessler, Mrs. John Ackley, Mrs. E. N. Somers, Mrs. Comfort, Mrs. Gibbs, Mrs. Cundall, Mrs. Palmer, Mrs. Edward Buckingham, Mrs. Colwell, Mrs. Elbert Pedersen, Mrs. G. A. Tripp, Mrs. Hawkins, Marion Ackley, Mrs. Douglas, Frances Ackley, Effie Nelson, Kenneth Everett, Elroy Gibbs.

Poultry and Rabbits.

Kenneth Eichner, J. H. Rickert, Rev. Joseph Weiss, Fred Eichner, D. Rickert, Kenneth Everett, Ben Gibbs, Melvin Raybell, Rev. H. W. Michener, Elizabeth Laveless, Ercell Leach, Clara Weatherwax, Elizabeth Weiss, Eddie Pederson, Arthur McAminch, and Russel Bond.

The wonderful display of canned fruit, vegetables and meats, including fish, showed that the women of the place have been doing their bit in conserving food. One exhibit comprised 20 different varieties of vegetables. On one long table were the war breads, economy cakes, doughnuts, cookies, white breads and candy. For the benefit of the readers who might wish to try the prize-winning recipes, they are printed below:

War Bread.

Three cupfuls rolled oats in one quart of boiling water. When lukewarm add one cake compressed yeast, one tablespoonful each of salt and sugar, a little lard, and make into a stiff mass with white flour. When light, make into loaves. When these are light, bake. This bread contains one-third oats and two-thirds wheat, the proportion allowed in using wheat flour.

Economy Chocolate Cake.

Two squares of chocolate in one cupful of hot milk, one cupful of sugar, one tablespoonful crisco, one egg, one tablespoonful soda, one and one-half cupfuls of flour, flavor.

The display of fancy work was beautiful and would have filled a large room.

The poultry and rabbits in division three were housed outside of the church basement in a series of suitable coops under canvass. There were some fine birds from egg laying strains. The numerous pens of rabbits showed that the boys as well as some of the older people are raising rabbits for meat.

The merchants of the city very generously donated all of the prizes which were well worth working for.

E. W. Lilly of Menlo judged the first division exhibits, Mrs. M. D. Egbert judged the flowers, W. E. Edwards awarded the blue ribbons in the manual training department, Miss Deach and Miss Phail, two domestic science teachers, acted as judges in the home economics display, while R. E. Short and I. A. Johnson acted in like capacity in the third division.

T. E. Pearce, the Edison dealer, loaned a fine Edison and records to furnish music for the occasion.

Ice cream and cookies were served,

William Amlaw, 93 years old, who won the prize for raising the best cabbage exhibited at the Community fair at South Bend.

also sandwiches and coffee to those wishing a lunch.

The fair lasted for two days, and although the object was not financial, the church made $30 after all bills had been paid. The entrance fees were 10 and 15 cents. The church families that made thi sa success were Weisses, Nettletons, Eichners, Ackleys, Raybells, Somers, McAninches, Browns, Sarlesses and Buckinghams. Everybody is planning for a bigger, better fair next year.

Tractor for Small Farm

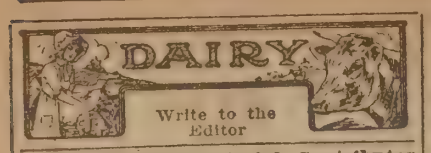
In answer to the question as to how small a tractor can be used in farm work, N. W. Roberts of Fulton, N. Y., writes that he has only nine acres of muck land upon which he raises celery, onions and lettuce. Last spring he bought a 5-10 H. P. tractor. Here are his own words:

"I have used this tractor to do all my plowing and fitting the ground, and I am so well pleased with it am wondering why I did not get it before now. It's cheaper to me than a team of horses for the reason its first cost is less than the upkeep. I used kerosene and eight or nine gallons a day was all it would use. I am using the tractor now to haul my crops to the road and loading on my truck to take to the car to ship. So you can see I have no horses to feed. I think there is a tractor for every size farm a man has. This nine acres I have is very soft ground, very much different than upland, but with the extra rims can get on to work as soon as if I had a team."

Ruff Community Fair

At the Ruff Community fair in Grant county, held October 30, prizes were awarded to Mrs. Mueller on loaf of bread; Clarence Aherin, Jacob Schmidt and Jacob Oster, potatoes; Andrew Jantz, apples; Fred Schmauder, wheat; Louise Becker, pie; Thelma Griggs, cake; Katie E. Kagele, jelly and fruit; Mrs. Jacob Jantz, canned fruit; Leona Borgens, child's needlework; Mrs. J. T. Swigart, fancy quilt; Helena Ewert, sofa pillows; Mrs. J. R. Wolford, embroidery; Miss Katie Goede, Hardanger embroidery; Mrs. Roy Swigert, crocheting; Mary Oswald, map of state of Washington; Margaret Zickler, drawing; Lydia Schell, free hand drawing in second and third grades; Bennie Schell, drawing in first grade; Mark Davis, child's toy exhibits.

Prizes on best school exhibits went to Districts No. 17 and No. 35, Lizzie Loeffelbein took the prize on basketry in District No. 35 and Mary Oswald in District 31; Robert Ramm, on map of Grant county.



The prizes for the tallest man went to William Agte and the tallest lady, Mrs. Jacob Ruff; the largest family, Mrs. Louise Mueller; best baby girl, Leora Keller; best baby boy, Edwin Beck.

Washington Irrigation Institute.

The tentative program for the meeting of the Washington Irrigation institute to be held at North Yakima December 10-11 has been announced by E. F. Benson, state commissioner of agriculture. Martin Chase, state hydraulic engineer, will deliver an important address on the water code and its administration. President Henry Suzzalo of the state university, Dr. D. T. Widtsoe, president of the University of Utah, and Professors J. S. Caldwell and O. L. Waller, of the State College of Washington will be among other speakers.

What the Other Fellow Does.

"One of the things I like about the Washington Farmer," said R. P. Farris of Harwood, Yakima county, "is the information it gives us concerning what the 'other fellow' is doing. If I know something of the amount of produce grown in the northwest, especially in competitive sections, how the growers are handling it and the best field methods they have employed, I will use my own judgment as to what is good and what is not for my condition here."

A. B. NYSTROM, Editorial Contributor

FLOORS ARE NEEDED.

Cold and Wet Should Be Avoided.

One of the things that should always be considered when a barn for any kind of live stock is being planned is the drainage. A muddy, sloppy barnyard is one of the things that drives farm boys to the city, and that reduces the profit from stock. This is especially true of a dairy barn.

Dairy cows must of necessity be given considerable time in the open. It is inadvisable to keep them in the barn closely, even though barn space and feed is plentiful. But they should not be allowed to stand or lie in mud or filth or on the cold ground. Energy that is used in warming up the ground that a cow lies on is taken away from milk production.

Both a roof and a floor are required to keep the cow's resting place dry, and it will always pay to provide both. Even with animals kept solely for meat production, a shed with some kind of floor to keep a comfortable resting place for them will pay dividends in winter weather. And in addition to the floor, a little use of waste roughage for bedding, and a little use of the dung fork in keeping it clean, will increase the profit from the herd.

Jefferson County Cows.

During the month of October, there were 285 cows tested in the Jefferson County (Ore.) Cow Testing association, according to the report of Ralph Erskine, the official tester. The average pounds of milk was 668, average pounds of butterfat, 33.62, and the average cost of feed $4.27. There were only a few of the members who had begun a heavy grain ration. This is due to the fact that there is considerable green feed, such as corn and maybe tops as well as other root crops being fed. Only two have begun on silage. H. L. Hansen is the owner of the Eunice, the purebred Holstein, which produced 83.92 pounds of butterfat during the month.

Holger Heifers Make Big Records.

McArthur & Stauff are now testing six 2-year-old daughters of their great Jersey sire, Holger, senior herd bull on their farm at Rickreall, Ore., all of which promise to make good records. They believe fully in register and merit testing and every heifer is put on official test after dropping her first calf. In addition to those in their own herd, a number of Holger's daughters in other herds have finished or are making good records and the gentlemen are naturally gratified over the records being made, as they expect over 15 of his daughters to be in the register of merit before the end of another year. The following are the cows referred to, in other herds:

Olalla, a cow owned by Thomas Williams of Forest Grove, Ore., has just completed her register of merit test as a junior 3-year-old with a record of 10,510.7 pounds of milk and 766.58 pounds of butter; average test, 6.18 per cent. Mr. Williams has two other daughters of the same bull that are about to finish their tests as 3-year-olds with records of approximately 675 pounds and 625 pounds of butter respectively. All three of these heifers were purchased at the John F. Forbis sale in 1914.

D. G. Lilly of Forest Grove also purchased two daughters of Holger at this sale and has just put them through their first official tests. Jersey Compass, the elder of these heifers, made 452 pounds butter as a junior 3-year-old, while Queen Bodoura finished her test with 409 pounds as a junior 2-year-old.

Veterinary

Dr. S. B. Nelson

Red Water in Cattle—Is there any cure for red water in cattle? Would it be advisable to try to raise a heifer calf six months old that has it?

T. N., Mount Vernon, Wash.

At the present time there is no specific cure for red water in cattle. Dr. J. W. Kalkus, veterinarian at the experiment station at Pullman, Wash., has been working with this disease for a number of years. To the present time he has not published any cure for the disease. I personally doubt the advisability for you to raise a heifer calf 6 months old that has the disease. I do not believe she will outgrow it. You better fatten her and sell her for veal. The meat is unsaleable for beef.

May Be Catarrah—I have a 12-year-old mare that raised a colt this summer. She is poor and has no ambition. She has had good pasture, hay and oats since she foaled. She scratches her tail a good deal.

W. E. I., Toledo, Wash.

It may be that your mare is suffering from a catarrhal condition of the intestines. I would recommend that you place the mare on half feed for a cuple of weeks. Then gradually increase the feed if you find it necessary. This applies both to the grain and the hay. At the same time give her the following powder, composed of iron sulphate, two ounces; powdered gentian, four ounces; powdered ginger, two ounces; artificial Carlsbad salts, eight ounces. Mix into a powder and give one heaping tablespoonful on feed morning and evening.

Mare Troubled With Worms—I have a sucking colt and also a mare that are troubled with long white worms.

J. M. K., Stevensville, Mont.

I would recommend that you cut down the mare's feed about one-third, then give from two to three drachms of iron sulphate on her grain feed night and morning for a week. The next morning give her one quart of raw linseed oil into which an ounce and a half of turpentine has been thoroughly shaken. The sucking colt may be better treated by giving every three or four days a couple of ounces of raw linseed oil in which a teaspoonful of turpentine has been thoroughly stirred.

FARMERS NOT A POISON DISINFECTANT

FLUSH COWS AFTER CALVING

Most valuable for bringing after-birth and also for treating barren cows and controlling abortion. B-K kills the infecting germs, heals the uterus, removes the slime and acid—no odor—no straining. More effective than lysol, Lugol's solution, carbolic and cresols—much safer. Send for our Bulletin 52 "Contagious Abortion" and testimony from leading breeders. Special Trial Offer

CUTTER'S
BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

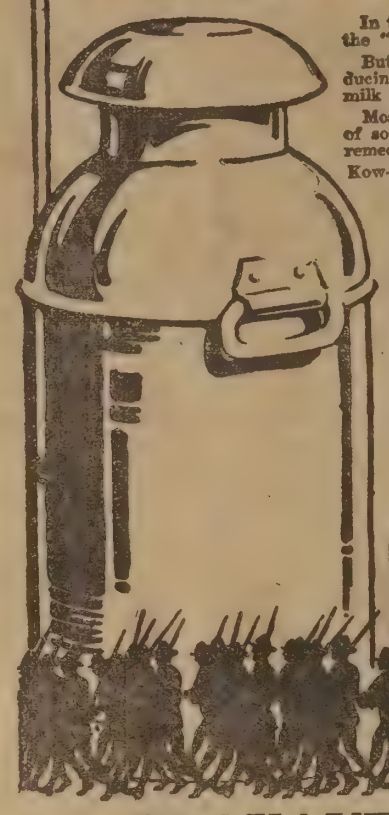
Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector	1.50



Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago

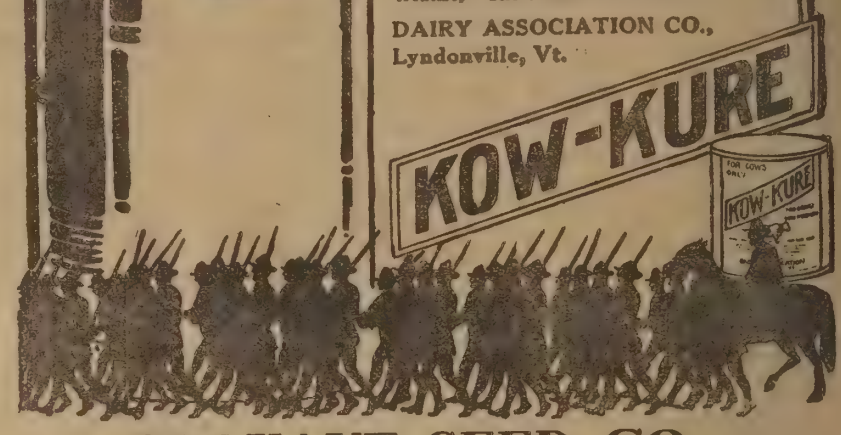
MILK and WAR TIME

In these days of high prices for dairy products, the "poor milker" is more than ever a liability.



But before you sell the cow that is not producing well, try to improve her condition. Her milk value is much greater than her meat value.

Most poor milkers are non-productive because of some defect of health, which can be quickly remedied by intelligent treatment.

Kow-Kure is a medicine that acts quickly on the organs of digestion and milk production. Its widely known tonic and curative qualities have made it the standard cow medicine for the prevention of disease and the treatment of Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches.

Give Kow-Kure a trial; it will do for you what it is doing for thousands of others. Feed dealers and druggists sell Kow-Kure; 55c and $1.10 packages. Send for free treatise, "The Home Cow Doctor."

Meat Headquarters

Opened Under Food Control Act

With the licensing of packers November 1 under the Food Control act, the meat division of the United States food administration opened headquarters at Chicago. J. P. Cotton, of New York city, has been appointed head of this division. Among his assistants is Dana Durand, a statistical and accounting expert of the University of Minnesota. Other expert assistants are to be appointed. These men will work in cooperation with Harry A. Wheeler, federal food administrator of Illinois.

Several advisory committees are being selected to represent the various branches of the meat-producing industry and also the consuming public.

The committee on hogs is composed of H. C. Wallace, Des Moines, E. Z. Russell, Omaha; W. M. McFadden, Chicago; John M. Evvard, Iowa Agricultural college, Ames; and Wyman Lovejoy, Roscoe, Ill.

The committee on cattle includes E. L. Burke, Omaha; Dwight B. Heard, Phoenix, Arizona; Alfred S. Gage, San Antonio, Texas; Warren T. McCray, Kentland, Indiana; W. R. Stubbs, Lawrence, Kansas, and W. A. Cochell, Kansas State Agricultural college, Manhattan.

Another committee, appointed to study the cost of producing swine and methods for stimulating their production, includes John M. Evvard: J. H. Skinner, Purdue university, Lafayette, Indiana; N. H. Gentry, Sedalia, Missouri; Dr. Tait Butler, Birmingham, Alabama; L. W. Funk, Bloomington, Illinois; E. M. Burdick, Herman, Nebraska, and W. A. Williams, Marlow, Oklahoma.

All packing and slaughter houses in the United States doing an annual business of more than $100,000 went under license control November 1. Protecting the welfare of the grower and consumer, together with providing only a fair profit for the packer, are among the objects aimed at in the new governmental regulations.

It is not the intention of the food administration to fix prices for which farmers shall sell their stock. Through the direction of export purchases of beef and pork products, however, it will use its influences to stabilize meat prices and to support remunerative prices to the farmer.

Where Hundreds of Beef Cattle Are Fed

The above photograph gives a faint idea of the big Warren, Dixon and McDowell ranch, near Prineville, Ore., where many hundreds of beef cattle are fed every winter on the succulent alfalfa raised on the ranch. The silo, looming up over the big barn, holds 300 tons and is believed to be decidedly the largest silo in the state. H. A.

Herefords Are Sold

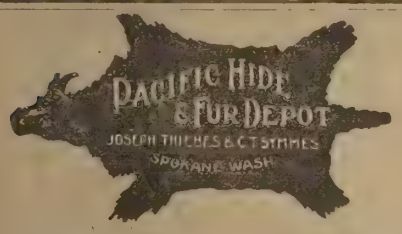
Purebred Stock Go to Many Points

The Herefore sale at the Northwest Live Stock show at Lewiston, Idaho, Nov. 12, resulted in fair values being received and buyers getting the worth of their money. Some of the offerings were not particularly well fitted, but they were generally in good condition, good individuals and of excellent breeding. Fifty-two head went through the ring for a total of $13,930. The females averaged higher than the bulls, although the two high animals were bulls. Gray Field Prince, a classy, well-bred consignment of J. D. Miles, topped the sale, going to the Spokane Union Stock Yards for $630. Debonair 68th, a Chandler consignment, carrying a lot of Beau Brummel blood, went to George Finney of Woodland, Idaho, for $550, and the other Miles consignment went to the Madden estate at Lewiston for $510.

No one buyer took any large number and the offerings were well distributed over Idaho, Washington, Montana and Oregon, the larger number remaining in the home state. Colonel Earl F. Gartin of Burley made his initial bow to the northwest on the auction block. He made a very favorable impression doing work and getting every cent possible. Harry Cranke worked in the ring in his usual inimitable efficient manner. The following is a complete report of animals sold, buyers and prices paid:

Bull consigned by A. B. Cook, Townsend, Montana:
Montana Fairfax 5th, born April 5, 1915, sold to Ben Reeves, Forest, Idaho ... $175
Females consigned by A. B. Cook:
Beau Banner 7th, born Sept. 17, 1916, G. D. Riggs, Lewiston, Idaho ... 200
Lady French, born April 4, 1915, Curtis J. Miller, Nez Perce, Idaho ... $330
Eleanor Fairfax, born March 21, 1915, C. A. Hunter, Wallowa, Ore. ... 450
Lady Perfection 14th, born Dec. 20, 1915, Curtis J. Miller ... 300
Lady Perfection 6th, born Jan. 15, 1915, C. A. Hunter ... 340
Bulls consigned by George Chandler, Baker, Ore.
Debonair 63d, born March 29, 1916, J. E. Baxter, Joseph, Ore. ... 325
Debonair 68th, born April 9, 1916, George Finney, Woodland, Idaho. ... 550
Debonair 71st, born April 27, 1916, J. E. Baxter ... 305
Debonair 76th, born May 9, 1916, George Behean, Whitebird, Idaho ... 340
Females consigned by George Chandler:
Menona, born April 27, 1916, Arthur P. Mundt, Winona, Idaho ... 205
Lily Debonair 3d, born May 9, 1916, Austin Garsuch, Winona, Idaho ... 280
Lady Hesiod, born November 3, 1915, George Finney ... 250
Blue Girl, born October 23, 1915, George Finney ... 250
Bright Girl, born October 15, 1915, George Finney ... 210
Bulls consigned by Hastings & Hover, Phillipsburg, Montana:
Camas Prince 7th, born May 20, 1916, J. E. Baxter ... 190
Camas Prince 8th, born April 15, 1917, R. J. Favor, Jerry, Wash. ... 155
Camas Prince 9th, born April 10, 1917, J. S. Madden, Lewiston, Idaho ... 155
Camas Prince 10th, born April 13, 1917, J. J. Sharp, Ellensburg, Wash. ... 165
Bulls consigned by A. O. Huntley, Cuprum, Idaho:
Woodrow, born March 4, 1913, Herbert Chandler, Baker, Ore. ... 280
Laddie Mode, born April 19, 1915, Charles Warren, Bear, Idaho ... 350
Woodrow Floss, Born November 9, 1916, P. H. Adams, Ellensburg, Wash. ... 230
Woodrow Blossom, born June 5, 1916, E. S. Sweet, Grangeville, Idaho ... 160
Bonnie Walker, Born May 20, 1916, J. J. Sharp ... 150
Bonnie Malheur, born March 20, 1916, T. S. Tippett, Enterprise, Ore. ... 185
Females consigned by A. O. Huntley:
Racine Wood, born May 20, 1916, Rimrock Stock Farm, Uniontown, Wash.. 175
Excell Wood, born April 14, 1916, Rimrock Stock Farm ... 200
Succession Wood, born April 18, 1916, G. F. Reinhardt, Nez Perce, Idaho .. 180
Kasan Heritage, born October 16, 1915, Rimrock Stock Farm ... 180
Kitty Wood, born March 3, 1916, Rimrock Stock Farm ... 235
Minneha Wood, born April 17, 1916, George F. Reinhardt ... 220
Caress Wood, born March 22, 1916, George F. Reinhardt ... 300
Vinette, born July 28, 1910, and calf, P. Chamberlain, Boles, Idaho ... 440
Molly, born March 29, 1915, P. Chamberlain ... 300
Lou Woodrow, born July 9, 1915, Curtis J. Miller ... 315
Joy Heritage, born October 20, 1915, P. Chamberlain ... 300
Bulls consigned by J. D. Miles, Livingston, Mont.
Gray Field Prince, born January 10, 1916, Spokane Union Stock Yards ... 630
Gray Field Ladd, born September 21, 1915, Madden Estate, Lewiston, Idaho 510
Consigned by Platt Brothers, Genesee, Idaho:
Spellbinder 8th, born May 29, 1916, Seth Jones, Grangeville, Idaho ... 275
Bonnie Fairfax, born June 27, 1916, Arthur P. Mundt ... 275
Bull consigned by Henry Thiessen, Sweetwater, Idaho:
Rex Donald 43d, born May 9, 1916, J. A. Danielson, Waitsburg, Wash. ... 300
Female consigned by University of Idaho:
Elvina, born October 22, 1914, and calf, M. E. Sewell, Lucile, Idaho ... 400
Bulls consigned by L. L. Young, Nampa, Idaho:
Commander, born July 2, 1916, C. E. Maynard, Colton, Wash. ... 200
Winslow, born June 20, 1916, J. D. Miles, Livingston, Mont ... 205
Sir Good, born July 3, 1916, A. D. Carr, Orofino, Idaho ... 160
John, born June 16, 1916, James S. Madden ... 250
Highland Ladd, born April 17, 1916, A. W. Rhett, Lucile, Idaho ... 205
Sir Goodfellow, born July 3, 1916, George Behean ... 335
Beau Meadow, born August 19, 1916, Edgar G. Fry, Ferdinand, Idaho ... 225
Beau E, born August 22, 1916, J. A. Barkley, Lewiston, Idaho ... 195
Beau Light, born May 11, 1916, J. E. Baxter ... 230
Beau L. E. J. Howard, Gifford, Idaho.. 160
Thirty bulls sold for $7320, average .$244.00
Twenty-two cows sold for $6610, average ... 300.45
Fifty-two animals sold for $13,930, average ... 267.88

Land Bank Does Big Business.



A report issued by the federal farm loan board indicates that up to November 1 farm loan bonds to the amount of $21,500,000 had been disposed of to investors of the United States.

These bonds bear 4½ per cent interest and are entirely tax free. They are secured by the first mortgages which the farmers give to secure loans made to them by the 12 federal land banks, and they are further secured by all of the assets of all of the 12 federal land banks. These bonds are being offered to the public at the rate of approximately $2,000,000 per week. The money derived from their sale is loaned to farmers at 5 per cent, the margin of one-half per cent being employed to pay the expenses of the federal land banks.

ABSORBINE STOPS LAMENESS

from a Bone Spavin, Ring Bone, Splint, Curb, Side Bone, or similar trouble and gets horse going sound. It acts mildly but quickly and good results are lasting. **Does not blister or remove the hair** and horse can be worked. All Northwest Contest

The final report of the all-northwest laying contest has been received. The contest began October 15, 1916, and ended October 14, 1917. There were 200 pens of five fowls in the contest. The 20 pens making the highest records for the 12 months were as follows:

	Eggs.
J. A. Hanson, Corvallis, W. Leghorns..	971
P. W. Harries, Seattle, W. Leghorns...	952
J. R. McRae, Miuwaukie, Ore., W. Leghorns	937
A. Unsworth, Sardis, B. C., W. Leghorns	908
Valley Farm, Texas, W. Leghorns....	856
J. D. Balmat, Spokane, W. Leghorns...	859
C. O. Engel, Seattle, W. Leghorns.....	820
L. F. Solly, Westholme, B. C., W. Leghorns	824
Charles Hudson, Escondido, Cal., W. Leghorns	809
Bliss & Bliss, Southworth, Wn., B. Rocks	807
Mrs. T. M. Dennis, Wenatchee, Wn., Salmon Faverolles	790
W. C. Thurlow, Fairview, Ore., W. Leghorns	789
C. Daniels & Sons, Hoquiam, Wn., W. Rocks	786
H. S. Leighty, Seattle, Barred Rocks...	772
C. D. Coolidge, La Grande, Ore., W. Leghorns	766
J. H. Haskell, Harstine, Wn., W. Leghorns	765
W. J. Loveland, Roy, Wn., W. Leghorns	763
K. Hammerbacker, Grants Pass, Ore., W. Leghorns	751
Oregon Agricultural college, B. Rocks.	748
J. H. Kingsbury, Twin Falls, Idaho, R. I. Whites	747
Ill-A-Hee, Grants Pass, Ore., B. Rocks.	741

These records are not very high, though they are the highest 20 out of the 200. An epidemic of colds and chickenpox seriously interfered with the success of the contest and caused a high mortality among the fowls.

The first three or four made fairly creditable records. Mr. Hanson's pen, with one or two exceptions, has been in the lead every month of the contest. It has been a rather close race between the first three.

In individual records hen 270 of the pen of P. W. Harries was first with 237 eggs, Auburn Poultry farm, Auburn, Wash., second with 233 eggs, P. B. Towne, Tekoa, Wash., third with 230. J. A. Hanson fourth with 224 and J. R. McRae fifth with 221. In all there were 16 200-egg hens in the lot.

J. D.

The Storrs Contest

The sixth annual egg laying contest at the Storrs (Conn.) Agricultural college ended October 31. A pen of Barred Plymouth Rocks owned by the Applecock farm of New Hampshire was the winner. This pen laid 2119 eggs, an average of 211.9 per hen. A pen of White Leghorns won second, with an average of 209 eggs. Last year Wyandottes won first and second and Oregons third. None of the pens this year equaled the record made by the pen of Oregons last year, the record of the latter being 212.2 eggs. Professionally it is to be regretted that the records did not show an increase this year over last year, but privately we feel like congratulating the Oregons that they would have won first place if they had been in the contest this year.

The average of all the pens in the contest, 1000 in number, was 163.38 eggs a hen. The lowest record was 93.7 per hen. Last year the average of all the pens was 162.

The English breeder, Tom Barron, is low down in the list this year. Barron usually figures among the winners. He has been in all the contests and has won more than any other breeder. His stock has made a wonderful record. He can not always expect to win. Winning egg layers are not made, they are born, and the best expert can not always tell which is the born heavy layer or the poor layer. There is an element of chance involved. Good laying qualities are inherited, and the good layers usually come from good layers, but not always.

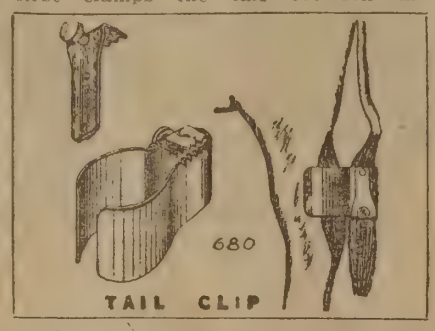
J. D.

The Hen Wardrobe

This is the time of the year, and this year of all years, when the keeper of poultry is apt to get cold feet. The year-old and older hens are molting and taking their annual rest. This vacation business has not been bred out of the hen. She needs her rest period or her shopping period when she furnishes herself with her annual supply of clothes. The rooster does not buy the dress ready made for the spouse; she must make her own dress, and make it out of the material that at other seasons she makes into eggs. She can not hire a dressmaker; she must replenish her own wardrobe. It was probably the same with humans, or with the human progenitors, if it is true that humans came from the ape, for the ape at that time, or before time was, certainly did not get her styles from Paris, and did not have a husband who could trade off a city lot for a new fall dress or a Liberty bond for a pair of high-heel shoes. The human progenitor, if we are correctly informed as to the species, undoubtedly provided her own wardrobe, her own dresses, out of the meat of her own body, like the hen of today. Possibly in the far distant future, in the course of evolution, the hen may become so civilized, so evolved, that it will not be necessary for her to draw upon the substance of her body to make clothes for herself, but will be able to draw upon the pocketbook of her husband rooster, who will be glad to have the change of dress made over night and to keep her decently clad every day in the year. That would eliminate the molting season, and with it the cold feet of the poultry keeper.

J. D.

Removable Rubber Heel.

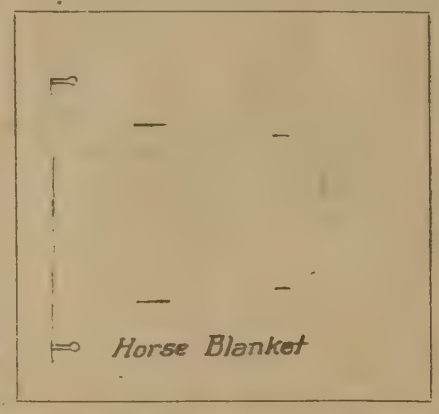


A rubber heel has been invented that can be slipped over the high heel of a woman's shoe.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

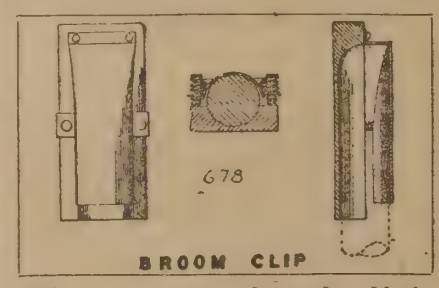
Tail Holder.



In applying this device, the operator first clamps the tail between the

toothed jaws and then springs the whole clip over the cow's leg. It holds the tail during the milking time.

Horse Blanket.



The new feature of this blanket is that slits are provided for the thills

and also for the hold-back straps. These keep the blanket in place and prevent the thills from making holes.

Broom Holder.

The holder shown here consists of a grooved metal plate attached by two

springs to a grooved wooden block. The handle, when shoved between them, is held by the tension of the springs.

Wonderful Egg Producer

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called 'More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4468 Reefer bldg., Kansas City, Mo. who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.

Five Acres

A Living on Small Piece of Land

A few days ago I met Mr. Pierce, a resident in an orchard district near North Yakima, and knowing he had a small orchard I asked him how many acres he had and what was the average yield. He replied: "I have five acres of land, all in orchard. It is situated on the car line about two and one-half miles out from town. I can ride to town for a neckel, and I would rather live there than in town. My income for five years has ranged from $1300 to $2700 per annum. I do most of the work myself, of course, except during the harvest season, when I have to hire; but I figure that I am making a very comfortable living for a small family."

Now, the fact is Mr. Pierce was brought up in the city of Chicago and prefers a rather retired country life to a salaried position in the city. He is getting what he likes, living in comfort, has enough work to keep him healthy and does not find it necessary to overwork. I do not see where a man could do better, provided he likes that kind of life. Now I know there are men who will not succeed in that way. It depends on the man.

A number of men now express the wish that instead of fruit they had land for the growing of sugar beets, potatoes, carrots, etc. This again depends much on the man.

The beet sugar men are claiming that the maximum yield of beets per acre this year in the Yakima valley was 31 tons at $7.50 per ton. This gives a gross income of $232.50 per acre. The estimated cost of production is approximately $50 per acre, which leaves a net profit of $182.50 per acre.

E. M. Long of the Wenas valley is reported to have grown 126 tons of No. 1 potatoes on six acres. He sold them for $30 per ton, making a gross income of $3780 on six acres, or $630 per acre.

Amos Ross, on Tieton drive, Yakima, grew 27.5 tons of carrots on one and three-quarter acres. He sold his carrots for $18 per ton, or $495.

Turnips are now selling for $24 per ton, are heavy producers and easily grown. Besides they can be grown on land from which an early crop like wheat, rye or early vegetables has been grown, making two crops the same year on the same land.

I will grant that as prices are now that if I did not have my orchard I would not plant it, and would grow vegetables or root crops instead, inasmuch as they will yield better net profits than fruits with a given investment and a given amount of labor. But the prices of these crops are higher than we have ever known, and these prices are not likely to continue. I think it will pay to keep the orchard, care for it, learn it in all its details and when the equilibrium of prices has been restored it will be found that this was the wiser course. G. L.

A Winter Garden

"Conserve," save, produce, utilize all your energy, use all your time not needed for rest, feed yourself, feed those dependent upon you, grow a surplus for the army and the "allies," invent methods of making a given amount of labor more efficient, "feed or fight." These are among the advices given, the lessons we are learning, and out of them grows the question of "How to Grow a Winter Garden."

In order to grow a winter garden successfully in most parts of the Pacific northwest it must be connected with a cellar or heating plant. In other words, the temperature must not be allowed to fall very far below the freezing point. There are hardy vegetables, like cabbages, endive, leeks, onions, lettuce, rhubarb and asparagus, that will stand a rather cold temperature. However, it probably will not pay to plant cabbages, because they occupy considerable ground, and because they can be kept so easily by burying in trenches for winter use when grown in summer or fall gardens.

There are certain vegetables that require very little sunlight and very little space, and these may be grown in a cellar. Among this class of vegetables are celery, rhubarb, asparagus and lettuce. Then, too, tomato vines may be transplanted to the cellar and tomatoes gathered until January. I am of the opinion that the florists, with hot houses, make more money on winter lettuce than on any other vegetable. G. L.

Information Bureau

The Farmer will be glad to answer questions of general interest, as well as those of a practical nature, relating to the farm or farm home. There will be no charge for this service. Questions must be signed with your name and postoffice address and will be answered either by personal letter or by publication when of general interest.

Address Farmers' Information Bureau, Room 35 Review building, Spokane, Wash.

The Maximum Farm Loan.

Can you tell me what the largest amount of money one farmer can borrow from the federal farm loan bank is? A. R. H.

One farmer can borrow $10,000. But it must be remembered in calculating what you wish to borrow that the farm loan bank lends not more than 50 per cent of the appraised value of your land. That is, if your farm is appraised by the bank's representative at, say $8000, you will be entitled to borrow $4000. If it is appraised at $20,000, you will be entitled to borrow $10,000. If it is appraised any sum higher than $20,000, you will be entitled to a loan of only $10,000, since that is the maximum allowed to any farmer under the provisions of the land bank law.

However, a recent ruling has been made which is of interest in this connection. Originally the regulations permitted a man and wife to borrow no more than $10,000 together, just as if they were one individual. Recently this regulation was amended by the land bank board at Washington, D. C., to allow them to borrow as high as $10,000 each, provided that they own enough land in their separate names for each to be entitled to a maximum loan. To illustrate: If the husband owns farm property appraised at $20,000 or more, and the wife owns property separately in her own name appraised at $20,000 or more, each can borrow $10,000 from the farm loan bank, whereas under the former provision they could borrow only $10,000 together.

In announcing this new regulation the land bank made it emphatic that the separate ownership must be bona fide, and not the result of mere transfers in order to secure the increased loans.

The Gasoline of Quality

Will Pool Railroads

Seek Maximum Efficiency for War

A revolutionary step in the system of railroad operation is being taken by the national railroad war board at Washington, D. C. Under the plan just announced all the railroads east of Chicago will be pooled into one centralized system and operated under the direction of the war board. Every item of equipment, including all engines, cars, fuels and tracks, will be under the central control. It is designed by this method to eliminate all cross hauls and all duplications of every kind, so that the maximum efficiency of the railroad hauling power may be brought into the service of the country in the transportation of commerce affecting the war. The operation program calls for the following:

Diversions of locomotives, employes and machine tools from western to eastern railroads.

Utilization of repair shops on western lines for repairing eastern equipment.

Pooling of all tracks and equipment in the east wherever practicable.

Pro-rata distribution among eastern roads of open top cars on a basis of tonnage-carrying capacity of the equipment in the pool.

Diversion from congested lines of all freight that can be handled by any open route.

Packers Regulated.

As predicted in an article elsewhere in this issue, word has just been received that the national food administration through its meat division has taken definite steps for the regulation of the meat packer with a view to establishing justice as between the producer and the consumer of meats. The regulative steps taken are still of a general nature, details having not yet been agreed upon for formal announcement. It is proposed, however, that the five large packing companies of the United States (Armour & Co., Cudahy & Co., Morris & Co., and Wilson & Co.) shall be allowed to make not more than 9 per cent net profit on the capital that they have invested. The regulations govern slaughtering animals, packing and curing meats and manufacturing foods essentially of animal origin.

English Smash Germans.

One of the most notable battles of the war was fought last week by the English and Germans on the northern French front, resulting in a smashing victory for the English. The attack was by the English suddenly along a 32-mile front, the central part of which was directly in front of Cambrai, a strategic railroad junction point. Gains were made along this entire front, ranging from one to over five miles.

Congress Next Week.

After a recess of something like two months, congress will meet again next Monday. It is expected that it will be well into next summer or fall before another adjournment can be taken owing to the great amount of war legislation likely to be needed. Among the matters likely to occupy some of the attention of congress this session will be the following: Further financial legislation for the conduct of the war and further war preparations; enlarging the powers vested by the espionage act in the president and the department of state; relations with Germany's allies—Austria, Turkey and Bulgaria—against whom this country has not yet declared war; possible amendments to the selective draft law, designed to make it more completely effective and possibly to include additional ages or additional registration.

Italians Hold.

At this writing the German and Austrian armies on the Italian front appear to be failing in their violent attempt to break through the Italian lines in the mountains and on the river Piave, where they took their stand after their remarkable retreat some two weeks ago. It is thought that one of the considerations back of the English attack in the Cambrai region was the desire to induce the Germans to recall some of their forces from the Italian front so that the pressure on the Italians would be lessened.

Russia Wants Peace.

Though declaring that Russia wants no separate peace with Germany, the Bolsheviki government in Petrograd is making strong efforts to bring about an armistice that would without doubt result in a great advantage over the allies in favor of Germany. If the allies refuse to join in the movement for an armistice it is not improbable that the rebel government now in control in Russia will let its desire for peace, however dishonorable, take the form of making separate terms with Germany. However, there is nothing coming out of stricken Russia to indicate that that country will long remain in the control of Lenine and his associates in rebellion. Russia can not make peace now, for there is no Russia. The country is without government.

U-Boats Still Active.

That the warning of war authorities against relaxation of the warfare against the submarines because of the recent great reduction of shipping losses from torpedoes was warranted is indicated by the fact that the reported losses for the week ending November 17 reached a large total. Seventeen British vessels, of which 10 were of 1600 or more tons carrying capacity, were destroyed. Several vessels of other countries were destroyed also. Sensational reports of submarines operating in South American waters were published during the past week, but their reliability has not been ascertained.

Bomb American Cities?

Will a fleet of German airships cross the Atlantic and drop bombs on American cities? Admiral Peary warns the people to expect this at a very early date. Should this occur, it would probably arouse the American people to support of the war in every possible way as nothing else short of loss of life on European battlefront could do.

Gompers Again Elected.

After having served the American Federation of Labor as president for 35 years, Samuel Gompers was reelected last week at the national convention at Buffalo, N. Y., and will serve another term.

Well Men Win Battles

Disease and Vice Is Now a Big Army Problem

"Social diseases in the army have become more than a question of morals and pity; they have become also a question of winning battles," Bishop Lawrence of the Massachusetts Episcopal diocese declared in a frank address before the Episcopal club of Boston Monday night of this week.

Speaking on "Making an American Soldier" he said that the meeting of vice conditions in Europe was among the most baffling problems with which the military and sanitary authorities had to deal and that they needed the strong and intelligent support of the whole people.

"The loose-living swashbuckler as an effective soldier has gone by the board," he said. "I believe that the time has come when the people should know the facts, not in sensational headlines, but as plain facts."

Quoting figures from the surgeon general's office of conditions in the army from 191 1to 1913, he said, one recruit out of every six was diseased and that this average was rather better than that of the young male population from which the army was recruited.

"The great body of our soldiers and sailors of our new army and navy are straight and clean," said Bishop Lawrence. "On the other hand there are in our communities a certain number of professionally loose women, and an appallingly large number of girls from 14 to 20 years of age who, attracted by the uniform and the romance, and emotionally stirred by the unwonted excitement, either yield to or throw themselves at the young men.

"This is war and it is one of the dangers and sometimes one of the horrors of war that emotions, both bad and good, are pitched to a high power. The greatest danger is with this last great class, the girls of our villages, towns and cities."

"It is only a question of time," he went on, "before they are contaminated by loose men and loose women, and follows the horror of the most wasteful diseases going into tne innocent homes of the country. It is the duty of the medical profession to give the facts; until they do, others must speak. Secrecy always breeds suspicion and exaggeration."

La Crosse Road

One of the best pieces of road built recently is that known as the La Crosse road in western Whitman county. The Whitman County Tax Payers league protested strongly against the building of this road last summer and secured photographs showing how bad it is or was, and these were published in a Spokane daily paper and aroused much unfavorable comment. Since the road has been completed and has been used it is admittedly one of the best pieces of road in the Inland Empire. The road is made of dirt and covered with gravel. It is well graded and follows a good grade. A. J. Shobe, one of the most prominent citizens of western Whitman county, said:

"The new road has developed into one of the best roads in this section. The gravel has worked into the soil and become cemented until it is almost as hard as cement. Since the heavy travel has gone over the road it has packed and become a model which should be followed by builders of roads wherever this kind of gravel can be found."

Mr. Shobe's statement is supported by that of many farmers and others who have traveled over the road and who pronounce it a splendid piece of road building.—J. E. N.

State Grows More Corn.

An increase in the corn crop, and a slight decrease in the potato crop, for Washington state is indicated by the official estimates of the United States department of agriculture, issued for November. Corn this year amounted to 1,520,000 bushels, E. T. Marchetti, field agent, finds. Last year it was 1,406,000 bushels.

Potatoes this year will yield 9,880,000 bushels, against 9,900,000 bushels, last year. The acreage put into tubers was greater this year, amounting to 79,000 acres.

Yakima county raised more than one-third of all the corn, its yield being 598,000 bushels, and it also produced 2,159,000 bushels of potatoes. Spokane county showed the next highest potato yield, 772,000 bushels, but was low in corn, producing only 49,000 bushels. Next to Yakima, Benton proved the best corn county, its output being 168,000. Chelan county had 79,000 bushels of corn; Okanogan, 89,000 bushels; Lincoln, 26,000 bushels; Columbia, 98,000; Walla Walla, 91,000; Stevens, 58,000, and Garfield, 38,000.

Shorthorns Go Well

Fifty Animals Average Over $300

Shorthorn enthusiasm and a fair range of prices marked the Shorthorn sale at the Northwest Live Stock show at Lewiston, Idaho, November 13, when 54 animals went through the ring for a total of $16,440. Nearly all the offerings were in good sale condition; they were generally of good breeding and were the best lot of cattle ever sold at Lewiston, so that the average of $306.40, while satisfactory, was still not above if up to their full value. A few animals failed to bring quite all they were worth but the buyers were generally discriminating and paid good prices for the better stuff.

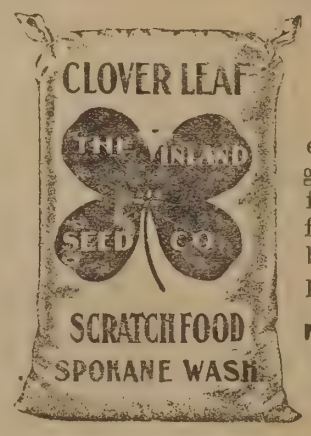
No sensational prices were paid, $610 being the top, for an uncatalogued calf substituted by Joe Turner. It was a grand individual and the breeding was guaranteed. One of the Minor consignments was also sold on a guarantee without even the name being given and throughout the sale the utmost confidence was shown in the breeders. Turner's bull went to J. E. Baxter of Joseph, Ore. The states of Oregon, Washington and Idaho took offerings, Idaho and Washington taking nearly an equal number. Carl Grief of Uniontown, Wash., paid top price for female, paying $515 for Maple's Pansy, one of the good ones in the Minor consignment.

Colonel George Gue was on the block and Harry Cranke in the ring and did their usual good work.

The following is a complete list of animals sold, buyers and prices:

Females consigned by W. O. Minor, Heppner, Oregon:

Maple's Pansy, born April 24, 1915, sold to Carl Grief, Uniontown, Wash.	$515
Golden Pride 2nd, born February 20, 1911, Walter Hoover, Nez Perce, Idaho	420
Golden Marble, born May 13, 1911, Walter Hoover	500
Choice Bud 4th, born March 17, 1908, Howard Gillette, Lewiston, Idaho	350
Margie, born April, 1916, Joe McDonald, Fenn, Idaho	340
Golden Lady, born March 23, 1915, Carl Grief	415



Bulls consigned by W. O. Minor:

Choice Lad 3rd, born September 11, 1916, Theo. Dufour, Cul de Sac, Ida.	300
Lord Plainview 2d, born March 26, 1916, Phil Adams, Ellensburg, Wash.	300
Golden Victor, born June 9, 1916, Phil Adams	260
Red Belt 3d, born April 2, 1916, Henry Zillerhoff, Colton, Wash.	250
Ear Tag 804, S. A. Blevins, Joseph, Ore.	375
Jolly, born June 24, 1916, T. A. Long, Grangeville, Idaho	250

Females consigned by W. H. Leonard, Pomeroy, Wash:

Dorothy, born June 8, 1906, Worthly Bros., Hunters, Wash.	225
Lady Gay, born August 21, 1908, E. S. Sweet, Grangeville, Idaho	230
Susan, born August 22, 1916, W. E.	

(Continued on page seventeen.)

EGGS

The high price of eggs should stimulate egg production. Egg production can be greatly increased by proper care and correct feeding. Our Clover Leaf Scratch is the ideal feed for egg production and is generally used by our most progressive poultrymen. Samples and price on application.

The Inland Seed Co.

Spokane, Wash.

Leather is honeycombed with pores. That's why sweat, moisture and dust so easily weaken your harness. Eureka Harness Oil prevents this - protects the leather fibre - keeps straps and tugs soft, pliable and strong. Keeps harness jet black.

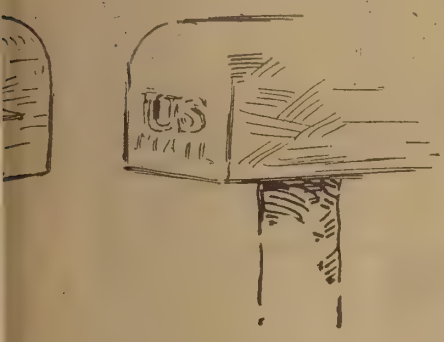
EMAN SAVES MONEY

EMENT TO YOUR NEIGHBOR

e been talking and working for the prin-
eration. Now there is an opportunity
iple into actual operation in the matter
criptions for The Washington Farmer.
n we have put up to our friends is this:
scriptions direct to us and hold back for
use the money which would ordinarily
ents' salaries, railway fares, hotel bills
ental expenses.



Rates Made Possible by Dealing Direct

25c for one year's subscription to THE WASHINGTON FARMER.

50c for three years' subscription to THE WASHINGTON FARMER.

$1. for five years' subscription to THE WASHINGTON FARMER.

Under the old plan you paid $1.00 and got your state farm paper for *one* year. Under the new arrangement you pay $1.00 and get your state farm paper for *five* years. That is certainly an eloquent tribute to the effectiveness of cooperation.

That our offer is heartily appreciated is shown by fact that a flood of subscriptions from every part of the state has been pouring in to the paper ever since the plan was announced.

In order to dispense altogether with our force of agents, we need the help of all our friends both in sending in their own renewals promptly and in introducing the paper to neighbors. That is why we ask you to give your copy of this paper to some other household when through with it.

If possible we want every farmer, fruit grower and stock breeder in the state to see this announcement. Pass the word along that by eliminating the middleman $1.00 will buy five times as much reading matter as when the old system was in force.

Incidentally, the new arrangement serves a double purpose, for in dispensing with our force of agents a large number of men are released for service in the many industries that are short-handed on account of the war.

Only the method of handling subscriptions is changed. This makes no difference in the quality of the paper. The comics, stories, helpful departments and all other popular features will be continued and the paper improved wherever and whenever possible.

Your Remittance May Be in Any Form Most Convenient---Silver, Stamps, Personal Check, Postal Money Order, Express Money Order or Bank Draft

Nov. 29

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

FLORA FLIRT AT THE CIRCUS

Flora Flirt, on pleasure bent,
Gayly to the circus went.

How her eyes with pleasure dance
When she sees the elephants!

She spies a youth with a cigarette,
And smiles at him—their eyes have met.

Flora flirts with all her might—
He drops his cigarette alight.

An elephant for nuts exploring
Burns his trunk—with pain he's roaring.

Trunk full of water the beast is squirting,
Drenching both—and ends their flirting.
The Moral—Those who flirt are oft dejected,
Baffled by the unexpected.

"Want" Ads in These Papers Are Economical ánd Effective

Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things.

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of these columns in every issue. Don't miss the "want" ad page today!

CHAPTER IX.

The Awakening.

Early the next morning Corporal Thomas came into the store and found Necia tending it while Gale was out. Ever since the day she had questioned him about Burrell this old man had taken every occasion to talk with the girl, and when he asked her this morning about the reports concerning Lee's strike she told him of her trip, and all that had occurred.

"You see, I'm a mine owner now," she concluded. "If it hadn't been a secret I would have told you before I went, so you could have been one of the first."

"I'm goin', anyhow," he said, "if the lieutenant will let me and if it's not too late."

Then she told him of the trail by Black Bear creek, which would save him several hours.

"So that's how you and he made it?" he observed, gazing at her shrewdly. "I supposed you went with your father."

"Oh, no! We beat him in," she said, and fell to musing at the memory of those hours passed alone with Meade, while her eyes shone and her cheeks glowed. The corporal saw the look, and it bore out a theory he had formed during the past month, so, as he lingered, he set about a task that had lain in his mind for some time. As a rule he was not a careful man in his speech, and the delicacy of this maneuver taxed his ingenuity to the utmost, for he loved the girl and feared to say too much.

"The lieutenant is a smart young fellow," he began; "and it was slick work jumpin' all those claims. It's just like him to befriend a girl like you—I've seen him do it before——"

"What!" exclaimed Necia, "befriend other girls?"

"Or things just like it. He's always doing favors that get him into trouble."

"This couldn't cause him trouble, could it, outside of Starks and Runnion's grudge?"

"No, I reckon not," assented the corporal, groping blindly for some way of expressing what he wished to say. "Except, of course, it might cause a lot of talk at headquarters when it's known what he's done for you and how he done it. I heard something about it down the street this morning, so I'm afraid it will get to St. Michael's, and then to his folks." He realized that he was not getting on well, for the task was harder than he had imagined.

"I don't understand," said Necia. "He hasn't done anything that any man wouldn't do under the same circumstances."

"No man't got a right to make folks talk about a nice girl," said the corporal; "and the feller that told me about it said he reckoned you two was in love." He hurried along now without offering her a chance to speak. "Of course, that had to be caught up quick; you're too fine a girl for that."

"Too fine?" Necia laughed.

"I mean you're too fine and good to let him put you in wrong, just as he's too fine a fellow and got too much ahead of him to make what his people would call a messy-alliance."

"Would his people object to—to such a thing?" questioned the girl. They were alone in the store, and so they could talk freely. "I'm just supposing, you know."

"Oh Lord! Would they object?" Corporal Thomas laughed in a highly artificial manner that made Necia bridle and draw herself up indignantly.

"Why should they, I'd like to know? I'm just as pretty as other girls, and I'm just as good. I know just as much as they do, too, except—about certain things."

"You sure are all of that and more, too," the corporal declared, heartily, "but if you knowed more about things outside you'd understand why it ain't possible. I can't tell you without hurtin' your feelin's, and I like you too much for that, Miss Necia. Seems as if I'm almost a daddy to you, and I've only knowed you for a few weeks——"

"Go ahead and tell me; I won't be offended," insisted the girl. "You must. I don't know much about such things, for I've lived all my life with men like father and Poleon, and the priests at the mission, who treat me just like one of themselves. But somebody will want to marry me some day, I suppose, so I ought to know what is wrong with me." She flushed up darkly under her brown cheeks.

The feeling came over Corporal Thomas that he had hurt a helpless animal of some gentle kind; that he was bungling his work, and that he was not of the caliber to go into the social amenities. He began to perspire uncomfortably, but went on, doggedly:

"I'm goin' to tell you a story, not because it applies to Lieutenant Burrell, or because he's in love with you, which of course he ain't any more than you be with him——"

"Of course," said the girl.

"—but just to show you what I mean. It was a good long spell ago, when I was at Fort Supply, which was the frontier in them days like this is now. We freighted in from Dodge City with bull teams, and it was sure the fringe of the frontier; no women—no society—nothin' much except a fort a lot of Injuns, and a few officials with their wives and families. Now them kind of places is all right for married men, but they're tough sleddin 'for single ones, and after a while a feller gets awful careless about himself; he seems to go backward and run down mighty quick when he gets away from civilization and his people and restaurants and such things; he gets plumb reckless and forgetful of what's what. Well, there was a captain with us, a young feller that looked like the lieutenant here, and a good deal the same sort—high-tempered and chivalrous and all that sort of thing; a West Pointer, too, good family and all that, and, what's more, a captain at 25. Now, our head freighter was married to a squaw, or leastways he had been, but in them days nobody thought much of it any more than they do up here now, and particularly because he'd had a government contract for a long while, ran a big gang of men and critters, and had made a lot of money. Likewise he had a girl, who lived at the fort, and was mighty nice to look at, and restful to the eye after a year or so of cactus trees and mesquite and buffalo grass. She was twice as nice and twice as pretty as the women at the post, and as for money—well, her dad could have bought and sold all the officers in a lump; but they and their wives looked down on her, and she didn't mix with them none whatever. To make it short, the captain married her. Seemed like he got disregardful of everything, and the hunger to have a woman just overpowered him. She'd been courted by every single man for 400 miles around. She was pretty and full of fire, and they was both of an age to love hard, so Jefferson swore he'd make the other women take her; but soldiern' is a heap different from any other profession, and the army has got its own traditions. The plan wouldn't work. By-and-by the captain got tired of trying, and gave up the attempt—just devoted himself to her—and then we was transferred, all but him. We shifted to a better post, but Captain Jefferson was changed to another company and had to stay at Supply. Gee! it was a rotten hole! Influence had been used, and there he stuck, while the new officers cut him out com-

(Continued on following page.)

Soldier Boys Signing the "War Roll"

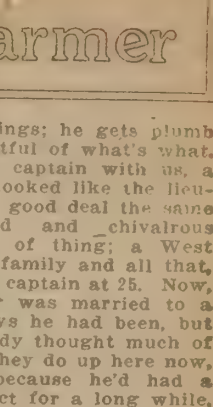
Captain Stanley Borleske of Portland, Ore., an officer at Camp Greene, Charlotte, N. C., was a member of the Michigan university football and track teams in 1914, and was picked as a member of the all-star western intercollegiate mythical team that year. "When I came into this camp," he told Arthur E. Bagley, the "Y" camp physical director, "I wondered how I was going to keep in physical condition. I saw no opportunity or place to do any training. You Y. M. C. A. fellows have sort of made opportunities for me to recreate and exercise, for since I have been here I have averaged three evenings each week out with my company football teams."

In the same camp was another young soldier who listened to an address given one evening in the "Y" auditorium by Dr. George R. Stair on "The Potter's Clay." After the sermon and after the invitation had been given and the men were singing the "War Roll" and were being presented with the customary pocket Testaments given to soldiers, one young man approached by Bagley upon the question of making a decision, responded affirmatively at once. When the Testament was handed to him he said: "I'm doing something for you that I refused to do for my mother. When I left my home in Idaho a month ago she asked me to take a pocket Testament with me, but I thought it was no part of a soldier's kit. This old Y. M. C. A. has made me change my mind. I am going to sit down and write her not to worry any more. I have my Testament, and I am going to read it. Thanks, mister, the Y. M. C. A. is sure good to us fellows." On the same evening in this camp 161 war roll cards were signed and over 250 men made public requests for prayer.

It is to keep up this sort of work in the camps of the soldiers and sailors in America, and to follow them across the seas when they go France, as well as to extend the same service to the armies of our allies, that the Y. M. C. A. war work council is raising. The sum of $35,000,000 is needed to carry on this service to July 1, 1918.

Handicraft Series

A series of handicraft articles for boys and girls, by the most widely known writers on this subject, will begin in the Farmer of next week. They will be illustrated and will tell just how to make many useful things. The initial article will be for the benefit of the girls, especially as Christmas is approaching, and will tell how to make:



A waste basket.
A shirtwaist box.
A shoe blacking case.

All in cretonne. Nothing better of the kind is published anywhere in America.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

How the Body Pores Breathe and Regulate Temperature

Dr. Hirshberg

Breathes there a skin with lungs so dead that never to its pores has said, "You are my own, my very life"? The communion, the mutual usefulness and the compensatory interchange of action between the lungs and the skin are well illustrated by the time-honored instance of the child who, to be made to represent Cupid in a startling way, was coated all over with gold leaf and who in consequence nearly suffocated to death.

The myriads of pores, canals, ducts and channels, microscopic in size, which pave the surface area of the human skin from tip to toe have almost as much to do with the regulation of the vapor, the air and the temperature of the human structure as have the comparatively huge lungs. The physiological duties of the skin are many and various. Not the least of these is the absorption of air and moisture which comes in confidential contact with its huge expanse.

The gargantuan extent of the skin you may begin to realize when you consider the story of Queen Dido and the cow's hide. Within the confines of its sliced spread arose a city.

Much of the help obtained by the lungs and the human fabric generally from the dermal appendage depends upon the state of the individual's health and the thickness of the outer cuticle. If the latter be thoroughly developed, no gases nor liquids will be permitted to penetrate its bulwarks.

Its Absorptive Powers.

On the other hand, if the cuticle or epidermis is thinned too much by ill health, thick garments, an indoor life, or by other enervating influences, plain soap and water and other foreign particles may inflame and irritate, and may damage the deeper dermal fabric.

The skin ordinarily must have sunlight, fresh air and water. While it does not automatically, in an elastic contractible or expensive fashion, breathe as the lungs do, yet it absorbs much from its surroundings.

Its Elimination Values.

Water vapor and other fluids are poured out from the skin. Oils, fats, carbonic acid gas—the same as expired from the lungs—other gases, certain mineral salts and fats are expelled from the lymph and blood via the multitude of skin pores. This exudation may be invisible, as distilled, evaporated spirits or in the form of profuse perspiration. The outer atmosphere and the temperature partly regulate this.

Blood heat, the ordinary tissue temperature of the human structure, is 98.4 deg. Fahrenheit. The activity and combustion within due to the combination of the breathed-in oxygen with the digested food manufactures heat just as if coal and oxygen were afire. This heat must be dissipated and the tissue regulated so the human temperature shall remain constantly at 98.4 deg. It is largely "up to" the skin to perform this task.

Perhaps you may now begin to suspect why the the complexions of some persons are florid with red blotches on cheeks and chin and nose. It is often gluttony or eating too much of the sort of food which heats up "the inner man" and thus inflames the skin.

The skin by expiration and by the excretion of sweat, which often evaporates unseen, makes a stanch effort to dissipate any excess of heat. There are two cooling influences at work, the evaporation and exhalation of the skin and the outside cool atmosphere.

When much heat is involved, as also occurs in violent physical efforts either of work or of play, the blood afterward rushes into the skin and the latter seizes the overproduction to expel it in the form of vapor, carbonic acid gas and perspiration.

The cooled blood then leaves the skin, rushes through the marrow, heart and lungs, and you may, if you are not adapted to such taxations, "feel chilled to the marrow." If you are accustomed to baths, to cold, to exposure, to sudden changes you are chilled only for a moment, and no ill effects ensue.

"The Barrier" By REX BEACH

(Continued from preceding page.)

pletely, just like the others had done, so I was told, and it drifted on that way for a long time, him forever makin' an uphill fight to get his wife reco'nized and always quittin' loser. His folks back east was scandalized and froze him cold, callin' him a squaw-man; and the story went all through the army, till his brother officers had to treat him cold in order to keep enough warmth at home to live by, one thing leading to another till he finally resented it openly. After that he didn't last long. They made it so unpleasant that he quit the service—crowded him out, that's all. He was a born soldier, too, and didn't know nothing else nor care for nothing else; as fine a man as I ever served under, but it soured him so that a rattlesnake couldn't have lived with him. He tried to go into some kind of business after he quit the army, but he wasn't cut out for it, and never made good as long as I knew him. The last time I seen him was down on the border and he had sure grown cultus. He had quit the squaw who was livin' with a greaser in Tucson——"

"And do you think I'm like that woman?" said Necia, in a queer, strained voice. She had listened intently to the corporal's story, but he had purposely avoided her eyes and could not tell how she was taking it.

"No! You're different, but the army is just the same. I told you this to show you how it is out in the states. It don't apply to you, of course—"

"Of course!" agreed Necia again. "But what would happen to Lieutenant Burrell if—if—well, if he should do something like that? There are many half-breed girls, I dare say, like this other girl, or—like me."

She did not flush now as before; instead, her cheeks were pale.

"It would go a heap worse with him than it did with Captain Jefferson," said the corporal, "for he's got more ahead of him and he comes from better stock. Why, his family is way up! They're all soldiers, and they're strong at headquarters; they're mighty proud, too, and they wouldn't stand for his doing such a thing, even if he wanted to. But he wouldn't try; he's got too much sense, and loves the army too well for that. No, sir! He'll go a long ways, that boy will, if he's let alone."

"I never thought of myself as an Indian," said Necia, dully. "In this country it's a person's heart that counts."

"That's how it ought to be," said the corporal, heartily; "and I'm mighty sorry if I've hurt you, little girl. I'm a rough old rooster, and I never thought but what you understood all this. Up here folks look at it right, but outside it's mighty different; even yet you don't half understand."

"I'm glad I'm what I am!" cried the girl. "There's nothing in my blood to be ashamed of, and I'm white in here!" She struck her bosom fiercely. "If a man loves me he'll take me no matter what it means to him."

"Right for you," assented the other; "and if I was younger myself, I'd sure have a lot of nice things to say to you. If I'd 'a' had somebody like you I'd 'a' let liquor alone, maybe, and amounted to something, but all I'm good for now is to give advice and draw my pay." He slid down from the counter where he had been sitting. "I'm going' to hunt up the lieutenant and get him to let me off. Mebbe I can stake a claim and sell it."

The moment he was gone the girl's composure vanished and she gave vent to her feelings.

"It's a lie! It's a lie!" she cried, aloud, and with her fists she beat the boards in front of her. "He loves me! I know he does!" Then she began to tremble, and sobbed: "I'm just like other girls."

She was still wrestling with herself when Gale returned, and he started at the look in her face as she approached him.

"Why did you marry my mother?" she asked. "Why? Why did you do it?"

He saw that she was in a rage, and answered, bluntly, "I didn't."

She shrank at this: "Then why didn't you? Shame! Shame! That makes me worse than I thought I was. Oh, why did you ever turn squaw-man? Why did you make me a breed?"

"Look here! What ails you?" said the trader.

"What ails me?" she mocked. "Why, I'm neither white nor red; I'm not even a decent Indian. I'm a—a—" She shuddered. "You made me what I am. You didn't do me the justice even to marry my mother."

"Somebody's been saying things about you," said Gale, quietly, taking her by the shoulders. "Who is it? Tell me who it is."

"No, no! It's not that! Nobody has said anything to my face; they're afraid of you, I suppose, but God knows what they think and say to my back."

"I'll—" began the trader, but she interrupted him.

"I've just begun to realize what I am. I'm not respectable. I'm not like other women, and never can be. I'm a squaw—a squaw!"

"You're not!" he cried.

"It's a nice word, isn't it?"

"What's wrong with it?

"No honest man can marry me. I'm a vagabond! The best I can get is my bed and board, like my mother."

"By God! Who offered you that?" Gale's face was whiter than hers now, but she disregarded him and abandoned herself to the tempest of emotion that swept her along.

"He can play with me, but nothing more, and when he is gone another one can have me, and then another and another and another—as long as I can cook and wash and work. In time my man will beat me, just like any other squaw, I suppose, but I can't marry; I can't be a wife to a decent man."

She was in the clutch of an hysteria that made her writhe beneath Gale's hand, choking and sobbing, until he loosed her; then she leaned exhausted against a post and wiped her eyes, for the tears were coming now.

"That's all damned rot," he said. "There's 50 good men in this camp would marry you tomorrow."

"Bah! I mean real men, not miners. I want to be a lady. I don't want to pull a hand sled and wear moccasins all my life, and raise children for men with whiskers. I want to be loved—I want to be loved! I want to marry a gentleman."

"Burrell!" said Gale.

"No!" she flared up.—"Not him nor anybody in particular, but somebody like him, some man with clean fingernails."

He found nothing humorous or grotesque in her measure of a gentleman, for he realized that she was strung to a high pitch of unreason and unnatural excitement, and that she was in terrible earnest.

"Daughter," he said, "I'm mighty sorry this knowledge has come to you, and I see it's my fault, but things are different now to what they were when I met Alluna. It wasn't the style to marry squaws where we came from, and neither of us ever thought about it much. We were happy with each other, and we've been man and wife to each other just as truly as if a priest had mumbled over us."

"But why didn't you marry her when I came? Surely you must have known what it would mean to me. It was bad enough without that."

The old man hesitated. "I'll own I was wrong," he said, finally, staring out into the sunshine with an odd expression. "It was thoughtless and wrong; dead wrong; but I've loved you better than any daughter was ever loved in this wide world, and I've worked and starved and froze and saved, and so has Alluna, so that you might have something to live on when I'm gone, and be different to us. It won't be long now, I guess. I've given you the best schooling of any girl on the river, and I'd have sent you out to the convent in the States, but I couldn't let you go so far away—God! I loved you too much for that—I couldn't do it, girl. I've tried, but you're all I've got, and I'm a selfish man, I reckon."

"No, no! You're not," his daughter cried, impulsively. "You're everything that's good and dear, but you've lived a different life from other men and you see things differently. It was mean of me to talk as I did." She put her arms around his neck and hugged him. "But I'm very unhappy, dad."

"Don't you aim to tell what started this?" he said, gently, caressing her with his great, hard hand as softly as a mother. But she shook her head, and he continued, "I'll take the first boat down to the Mission and marry your ma, if you want me to."

"That wouldn't do any good," said she. "We'd better leave things as they are." Then she drew away and smiled at him bravely from the door. "I'm a very bad to act this way. S'cuses?"

He nodded and she went out, but he gazed after her for a long minute, then sighed.

"Poor little girl!"

Necia was in a restless mood, and, remembering that Alluna and the children had gone berrying on the slopes behind the Indian village, she turned her way thither. All at once a fear of seeing Meade Burrell came upon her. She wanted to think this out, to find where she stood, before he had word with her. She had been led to observe herself from a strange angle, and must verify her vision, as it were. As yet she could not fully understand. What if he had changed, now that he was alone, and had had time to think? It would kill her if she saw any difference in him, and she knew she would be able to read it in his eyes.

As she went through the main street of the camp she saw Stark occupied near the water-front, where he had bought a building lot. He spoke to her as she was about to pass.

"Good-morning, Miss. Are you rested from your trip?"

She answered that she was, and would have continued on her way, but he stopped her.

"I don't want you to think that mining matter was my doing," he said. "I've got nothing against you. Your old man hasn't wasted any affection on me, and I can get along without him, all right, but I don't make trouble for girls if I can help it."

The girl believed that he meant what he said; his words rang true, and he spoke seriously. Moreover, Stark was known already in the camp as a man who did not go out of his way to make friends or to render an accounting of his deeds, so it was natural that when he made her a show of kindness Necia should treat him with less coldness than might have been expected. The man had exercised an occult influence upon her from the time she first saw him at Lee's cabin, but it was too vague for definite feeling, and she had been too strongly swayed by Poleon and her father in their attitude toward him to be conscious of it. Finding him now, however, in a gentle humor, she was drawn to him unwittingly, and felt an overweening desire to talk with him, even at the hazard of offending her own people. The encounter fitted in with her rebellious mood, for there were things she wished to know, things she must find out from some one who knew the world and would not be afraid to answer her questions candidly.

"I'm going to build a big dance hall and saloon here," said Stark, showing her the stakes that he had driven. "As soon as the rush to the creek is over I'll hire a gang of men to get out a lot of house logs. I'll finish it in a week and be open for the stampede."

"Do you think this will be a big town?" she asked.

"Nobody can tell, but I'll take a chance. If it proves to be a false alarm I'll move on—I've done it before."

"You've been in a great many camps, I suppose."

He said that he had, that for 20 years he had been on the frontier, and knew it from West Texas to the circle.

"And are they all alike?"

"Very much. The land lies different, but the people are the same."

"I've never known anything except this." She swept the points of the compass with her arm. "And there is so much beyond that I want to know about—oh, I feel so ignorant! There is something now that perhaps you could tell me, you have traveled so much."

"Let's have it," said he, smiling at her seriousness.

She hesitated, at a loss for words, finally blurting out what was in her mind.

"My father is a squaw-man. Mr. Stark, and I've been raised to think that such things are customary."

"They are, in all new countries," he assured her.

"But how are they regarded when civilization comes along?"

"Well, they aren't regarded, as a rule. Squaw-men are pretty shiftless, and people don't pay much attention to them. I guess if they weren't they wouldn't be squaw-men."

"My father isn't shiftless," she challenged, at which he remained silent, refusing to go on record. "Isn't a half-breed just as good as a white?"

"Look here," said he. "What are you driving at?"

"I'm a 'blood,'" she declared, recklessly, "and I want to know what people think of me. The men around here have never made me feel conscious of it, but—"

"You're afraid of these new people who are coming, eh? Well, don't worry about that, Miss. It wouldn't make any difference to me or to any of your friends whether you were red, white, black or yellow."

"But it would make a difference with some people?" insisted the girl.

"Oh, I reckon it would with eastern people. They look at things kind of funny, but we're not in the east."

"That's what I wanted to know. Nice people back there wouldn't tolerate a girl like me for a moment, would they? They wouldn't consider me good enough to associate with them?"

He shrugged his shoulders. "I guess you'd have a hard time breaking in among the 'bon-tonners.' But what's the use of thinking about it. This is your country and these are your people."

A morbid desire was upon her to track down this intangible racial distinction, but she saw Runnion, whom she could not bear, coming towards them, so thanked Stark hurriedly and went on her way.

"Been making friends with that squaw, eh?" remarked Runnion, casually.

"Yes," replied Stark. "She's a nice little girl and I like her. I told her I didn't have any part in that miners' meeting affair."

"Huh! What's the matter with you? It was all your doing."

"I know it was, but I didn't aim it at her. I wanted that ground next to Lee's, and I wanted to throw a jolt into old man Gale. I couldn't let the girl stand in my way, but now that it's over I'm willing to be friends with her."

"Me, too," said Runnion, looking after Necia as her figure diminished up the street. "By heaven! She's as graceful as a fawn; she's white, too. Nobody would ever know she was a breed."

"She's a good girl," said Stark, mu-

We Promised to "Grub-Stake" Our Allies; We Must Not Break That Sacred Promise

"I wish that every thoughtful patriotic man and woman in the Pacific northwest would read the following earnest and eloquent appeal which we have just received from the United States food administration," says N. W. Durham, chairman of the Spokane county (Washington) council of defense:

Uncle Sam is mighty big and strong, but he is not so big and strong that he can afford to break a promise. There is not a real American in this country who would not fight to make good one of Uncle Sam's promises. When Uncle Sam says anything, that means that all his loyal sons and daughters have said it. The honor and the interest of this nation are in the keeping of our splendid citizenry.

Here is the proposition: We have promised to "grubstake" the allies. We said "You need not farm—you fight."

They did not farm, but how they did fight.

Winter is coming on. There are few for the sowing and there are fewer now for the harvest. The pinch has come. In France they are looking across the sea and saying:

"How about that grubstake, Uncle Sam; how about that grubstake?"

They are not whispering, the Frenchmen, they are not that kind, but they are hungry, and if we fail them with our grubstake they will starve. Thousands of them—men, women and children.

Gnawing at a mere empty promise will not help them. Nothing will help them but food.

It is food that will win the war.

How are we going to get it?

We are going to save it—save it to save our pals, because that's what the allies are in this fight.

We are going to make good on Uncle Sam's promise that he would furnish the grubstake for this war.

The allies need more wheat, more meat, more fats, more sugar. It is either wheatless and meatless days for us or wheatless and meatless months for them.

And we are going to help—every one of us. There is no mistake about that. We will make good on the grubstake promise for the sake of the folks who trusted us and for the sake of our soldiers as well. Just remember that they are bound for France—the land where we are sending the grubstake.

We want no regrets after this war. We have had ample warning of the condition which awaits us, unless every American citizen responds to the call of duty. You and I want to feel, when the regiments of our boys return from the battlefields of Europe, some of them possibly broken, but all victorious, that we have done our part, even to the last detail, and we may not have to lay upon our own consciences the loss, through our neglect, of a single American.

REMEMBER!

Increased rate of postage —letters THREE CENTS an ounce. In sending silver coin by mail be sure and ask your postmaster how much postage is required for your letter.

All the World's a Stage, and All the Men and Women Merely Players

Principals in De Saulles Case

The social preminence of the principals of the De Saulles tragedy, in which Mrs. Blanca De Saulles is on trial for the murder of her husband, Jack De Saulles, has resulted in many requests for seats in the courtroom at Mineola, Long Island, by men and women of high social standing.

Whole Family Wiped Out by Germans

A whole family, mother and seven children, were murdered by a bomb dropped by a German air raider. This terrible deed happened in the London area. The bomb fell on the home in which the family lived. The building was wrecked and all the inmates killed.

Palace Defended by Women

The illustration shows the Winter Palace, Petrograd. The women's death battalion fought for four hours against the troops of the maximalists and defended the capital for that period but were compelled to surrender in the latest revolt in the Russian capital. Because of their predominance in Petrograd, the seat of government, the influence of the maximalists, the most extreme class of the Russian revolutionary socialists, upon Russia's policy has been marked. It was this sinister influence that prompted the recent proposal by the Kerensky government to remove the capital to Moscow.

Gets Honor Cross.

The French government has conferred the Legion of Honor cross on Mrs. Edmund L. Baylies of New York in recognition of her relief work on behalf of France. Both Mrs. Baylies and her husband, Edmund L. Baylies, who is a member of the firm of Carter, Ledyard & Hastings, attorneys, have been actively interested in war work. Mrs. Baylies has specially interested herself in training in suitable trades the French soldiers who have been maimed while at the front.

Ways to Save Money

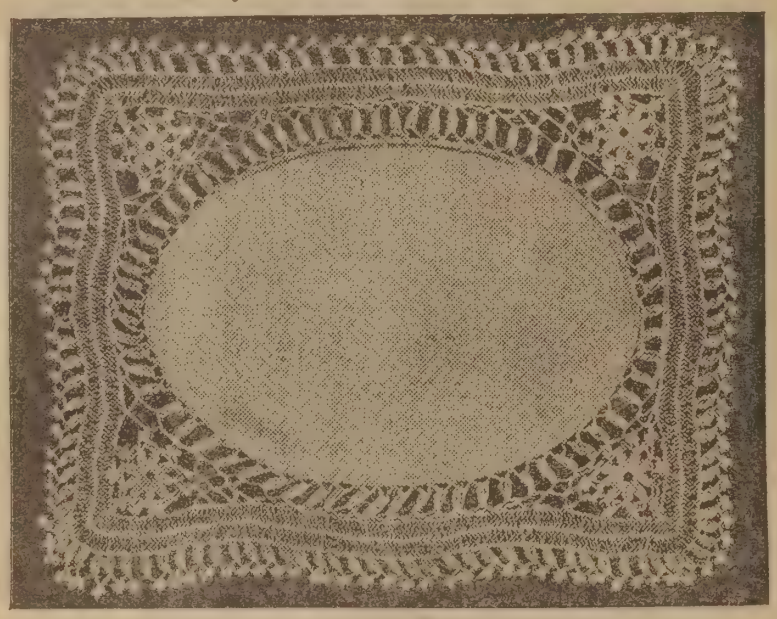
By MRS. SAM HAYES.

Use peanut butter instead of lard or cow's butter in the next batch of cookies you make and note the fine taste and economy on shortening.

Good sewing aprons can be made from the lower part of men's worn, black sateen shirts, using upper part of the arm for bib, pockets, etc., and by feather-stitching edges in canary yellow or pink, etc., are very pretty. Serviceable dust caps can be made from the same also.

Lounging pillow covers made of the above goods and worked with bright colored floss are nice and serviceable and do not need washing as often as lighter colored goods. That white dimity or muslin dress with the flowers that faded can be ripped up and bleached and with the use of a few yards of narrow edging, bought or hand made, can be remodeled into lovely tea aprons, corset covers, etc., or protecting aprons for the school lass.

Good drawers and leggings combination for a small child can be made by splitting adult's stocking legs down from the top, the required distances and putting a diamond shape piece of stocking in the crotch and elastic at the waist and under the foot. Right size an be ascertained by trying on the stocking legs as they are cut. Stocking legs cut off and gathered at lower end make a fine skull cap for the men or boys to wear under their caps or hats as temple and ear protectors. Heavy wool stocking legs, split lengthways and sewed together and shaped at top make comfortable chest and back protectors for any one in the family. If properly made they resemble the sleeveless army sweater, edges can be hemmed, bound or crocheted. A number sewed together and covered make excellent pads for a child's crib.



The plain old-fashioned tight skirt, if it was made of close woven goods makes an excellent suit protector by sewing up the placket and at the top and putting fasteners across the bottom. If it contained a pocket it can be used to hold accessories to the suit or dress.

Ordinary Laundering.

Ordinary laundering, mentioned frequently as a method for removing stains, should be done as follows, says a bulletin issued by the United States department of agriculture on removal of stains from clothing and other textiles. First, soak the stained portion in cold or lukewarm water, rubbing the stain with a neutral soap if necessary. Follow this by thoroughly rinsing in clean water, after which the article may be laundered as usual. Use this method only for cotton and linen (white or fast colors) and the so-called wash silks and washable woolens.

Crochet and Tatting Designs

By WINIFRED WORTH

PIN CUSHION TOP OR CENTER PIECE.

Used either as a cushion top or center piece, this beautiful crochet design will appeal to every housewife.

Use one ball No. 20 Cordonnet or silk. Dc. all around oval piece of linen and join.

1st Row—Ch. 5, sk. 4, repeat, turn and join.

2d Row—1 cluster, ch. 5, rp. to end of row.

Place medallions, and use one row of Maltese crochet for band on outer edge.

Last row is 1 c., 1 p. (4 ch. 3 p. at top of c.) ch. 4. Repeat to end. Care must be taken to keep the outer edge square.

Dressing table scarf or small center piece may be made as above by increasing or decreasing to desired size.

Initials may be embroidered in center of linen.

Star Medallion.

This popular medallion is used in many designs in this series of crochet lesson instalments. You will find it in one of the boudoir caps and other articles.

Ch. 9. Join to form ring.

1st Row—Ch. 5, 1 c., ch. 5, 1 c. Repeat 7 times, join.

2d Row—Ch. 5, 1 t. over ch. of 5, 1 p., ch. 5, 1 dc. in top of c., repeat to end of row.

Vegetable Marmalades

Vegetable marmalades or jams are made less expensively than fruit marmalades, because a less proportion of sugar is used and because the vegetables may be procured more cheaply. The extension department of the United States department of agriculture, cooperating with state agricultural colleges in the north and west, presents several suggested recipes for vegetable marmalades or jams, to be used the same as fruit products. The ingredients for some of these are shown below. In each case the mixture should be cooked slowly until it is thick and the ingredients are tender, and then packed in hot jars and sterilized.

Carrot marmalade—Two cups of ground carrot, 1 1-2 cups of sugar, 2 sliced lemons and 2 teaspoonfuls of ground ginger root.

Carrot and orange marmalade—Two cups of ground carrot, the juice of 2 lemons, the juice and grated rind of 1 orange, 1 cup sugar.

Carrot and pineapple mamalade—One cup of ground carrot, 1 cup of shredded pineapple, 1 cup of sugar, 1 sliced lemon.

Pumpkin and pineapple marmalade—One cup of pumpkin peeled and ground, 1 cup of shredded pineapple, 2 cups of sugar, 1 teaspoonful of ginger; this to stand over night in a granite pan or for several hours until the juice is extracted. Add the juice and rind of 1 lemon and cook as heretofore stated.

Ripe tomato marmalade—Twelve medium-sized tomatoes peeled and thinly sliced, 1 1-2 lemons sliced, 1 3-4 cups of sugar; to be placed in stew kettle in layers, cooked in covered vessel until tender, and then to simmer until of right consistency.

Green tomato marmalade—Two pounds of green tomatoes cut in cubes, 2 teaspoonfuls of bruised ginger root in cheesecloth bag, 2 cups of sugar, 2 sliced lemons.

Increase in Supply of Rye.

The visible supply of rye in the United States on October 20, 1917, was 3,454,000 bushels, an increase of more than 90 per cent over last year.

Fresh Air Good for Face.

It is a mistaken idea that bundling up to the eyes and covering the face with thick veils protects the skin in the winter. The more the face is exposed to the fresh air the better it will be for the complexion, and there is nothing more invigorating and beneficial than a brisk walk during a snow flurry. Never carry an umbrella when it is snowing. The best kind of water to wash your face in is soft rain water, and as snow is only frozen rain water there is surely no reason why it should be injurious to the skin.

Do not wash your face before going out into the open air, but if cleansing is necessary, apply cold cream and rub it well into the pores, afterward wiping the face with a soft towel. Cleanse the face with cold cream and a good massage cream at least once a week, and apply a lotion to the face, hands, and lips every night before retiring. The lips are more susceptible to cold and chap more easily than any other part of the face.

To Protest the Patient.

A physician said this is one of the best aids to a speedy recovery from pneumonia. Make a tight-fitting jacket of cheesecloth, sleeveless, and interline with two thicknesses of sheet cotton. Line with the cheesecloth. Fasten in front with snaps; it is worn next the skin. It is best to have two of these little coats. They protect the patient from any chance draft when changing the clothes or bedding.

Active Volcanoes.

More than a quarter of the active volcanoes of the world are on United States soil. There are about 60 volcanoes in Alaska and in the Aleutian islands, just off the coast. In the western United Staets, in the Philippines and in the Hawaiian islands there are nearly as many more. There are but 417 throughout the globe.

More Than Mere Right.

Singleton—"But even a married man has a right to his opinion." Henpeck—"My dear fellow, it isn't a question of right; it's a question of courage."—Boston Transcript.

Why Not Save That Extra on Underwear?

It's really a startling eye-opener to see just what amazing value you can get when you buy Hanes Underwear. Read about the extra features over there in the illustration. Add 'em all up—then get this:

Hanes Winter Weight Underwear is made of fine, long-fibre cotton, snug-fitting, sightly and strongly made. Every seam is guaranteed unbreakable where the wear is greatest. It is springy and comfortable, warm and cozy.

Greatest Winter Underwear **HANES** Sold at Popular Prices

ELASTIC KNIT UNDERWEAR

Where can you get anything to touch that for downright value? Don't pay a high price just because you're used to paying it. Hanes is just the right price for everybody and the underwear everyone should wear.

Here's the Big Specialty for 1917

A boy's union suit that combines the best features of the men's suits with a downy softness and cozy warmness just right for youngsters. Its value can't be duplicated anywhere.

Ask the Hanes dealer to let you see these two big underwear values. If you don't know him, write us. Don't let this chance slip by, but stock up against the cold weather by buying a half dozen suits before your dealer is sold out.

GUARANTEE

We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks on Hanes Underwear.

BE SURE TO GIVE NUMBER AND SIZE.

Plain Food Assures Health.

To the Editor: The women of America are surely able to do a great deal in the conservation of food. In this great Inland Empire where we have such bountiful gardens, and the age of glass jars, we can do much toward feeding our families, in winter, from garden stuffs of all kinds, which would otherwise be wasted.

Our sisters here who do not want to feed their chickens during winter can them in the fall, for winter use, making a splendid dish.

Our government bulletins on canning will give all the details for canning the various things. If only a jar or two of surplus is canned each time it soon gives a variety.

Not only in the canning way can we help, but in watching and checking the waste of the kitchen and in fact of the whole house. By cooking and serving plain, wholesome food our health is assured and years added to life.

What woman is not encouraged by the thought that less food material will be made into alcoholic drinks. God hasten the day when not an ounce will be used for such purpose.

MRS. ALICE G. FARR.

PERFECTION OIL HEATER

A Week's Vacation This Month.

Dear Aunt Nellie This is the first time I have written to the Corner. I hope that every member enjoys reading the letters as much as I do. May I join the Corner? If so, please let me know. My complexion is tan. I have brown eyes and dark brown hair. I am 10 years old. My birthday is the 18th of May. Have I a twin? I would like to see my letter in print. I am in the fifth grade. My teacher's name is Mrs. Bernice Anderson. I like my teacher. She is very good to me. I take music lessons from Miss Loveless. I am in the first grade of music. I think some of my lessons are very easy. I like Miss Loveless very much. I go to Sunday school to a little church about three-quarters of a mile from our place. My sister is the teacher in my class. There are 11 girls in my class when they are all there. There is one class for the little girls and one for the little boys, one for the big boys and girls. I am going to tell you what I do when not in school. I study my music lessons. Sometimes I wipe the dishes and carry in wood for my mother and run errands. We are going to have a week's vacation this month because teacher is going to the institute Thanksgiving week. I live on a 45-acre farm. I have three cats and also had some kittens, but they died. I have a dog whose name is Togo. Every time he is going to eat I tell him to speak and he will bark. When I tell him to shake hands he will put up his right foot. When any one comes around he always barks. Next time I write I will tell you about my summer vacation.—Violet Johnson, R. F. D. No. 5, Box 33, Mount Vernon, Wash.

(Yes, Violet, you are a cousin now and we are all going to enjoy your letters. Write often, won't you? Aunt Nellie.)

Hilma's Bit Is Drying Apples.

Dear Aunt Nellie: This is my fourth letter to the Farmer. It is quite a long time since I wrote last. But I like the letters so that I thought that I would write again. All the children are improving in their letters. Now I will tell you something about our farm. It is only 13 acres, but we have lots of hay in our barn and many potatoes in our cellar. It is getting colder now and rains oftener than it does in summer. It is raining a little bit now. It is getting pretty close to Thanksgiving. I like school fine now and I like my teacher, too. Her name is Miss Foxwell. I got a letter from a girl who writes to the Children's Corner, too. Her name is Edith Holm. I have gotten many good letters from her and ar glad to say I have answered all of them. I am still writing to her. For Thanksgiving dinner we have everything nice to eat, turkey, chicken, potatoes, pumpkin pie and many things that I can not mention because it would take too long. We play many games on Thanksgiving, too. On Thanksgiving we ought to think of the soldiers, too, who are in France fighting so hard for us while we can stay home and have everything nice. I suppose every school child in the United States is doing his bit. My sister and I are drying apples and I think it is a very good plan. Our teacher told us to do it. My birthday is August 8. I am 11 years old and in the fifth grade at school. I will write again.—Hilma Anderson, R. R. 3, Box 19, Olympia, Wash.

Jennie's Brother Has Enlisted.

Dear Aunt Nellie: It is quite a time since I have written to the Corner. This is my second letter to it. I am 14 years old. My birthday is April 25. I am in the eighth grade. If I have a twin I'd like to hear from her or any of the other cousins. I would like to have Aunt Nellie explain about The Roll of Honor and the prizes. I go to the Ebenezer Christian school. My teacher may have to go to the training camp before long. My brother enlisted in the aviation corps as a mechanic. He will go to Texas to be trained. He's in Fort Lawton now. I am corresponding with two of the cousins, both are aged 14. They are Edward Blakeslee and Luella Faulkner. I would like to see the Corner enlarge. I enjoy reading the letters. They are very interesting. A few new cousins of this school are writing to the Corner. I am writing this letter in school. I should be studying civics.—Jennie Van Wyke, Box 89, R. R. 1, Lynden, Wash.

Colored Reflections on the River.

Dear Aunt Nellie: This is the third time I have written to you. I enjoy the Corner very much. I have found a twin. Her name is Hazel Slinkard. She is just one day older than I am. I wish she would write to me. I will tell you about sunset. I do not think there are any prettier things than nature's own. One evening Gilbert, my brother, and I came home, and there was no one at home so I made a lunch for we were very hungry. Then we went down to the river to eat our lunch, but I found a better place, a nice levee we found, so we ate our lunch down there. While we were eating the sun set. The reflection on the river was pink, blue and red. Acrass the river the sumach was red as the baby rambler. There were some green shrubs there, too. When we were bringing the cows home from the pasture the sky was white in the middle, red and blue on each side. It loked like some one had stretched Old Glory over the sky. I think that one was right who said, "There is no place like home." My teacher and we girls help the Red Cross. I think the Red Cross is a great thing to help the wounded soldiers. I will tell you about a Hallowe'en party I went to. We girls dressed up as ghosts. We played Hallowe'en games. The men and boys formed a circle, one of us grils or women was to be their partner for supper. Then we drew our fortunes. I am a girl of 11. My birthday is on the 19th of September. I have brown hair. I weigh 62 pounds. I am in the fifth grade at school.—Maple Schleif, Box 33, Molson, Wash.

Five Miles to Go to School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 14 years old. My birthday is the 23d of February. I go to school and I am in the sixth grade. We have to go five miles to school and it is nearly all up hill. We walk most of the time in winter because we get so cold riding horseback. The place we live on has two large berry patches, one is a loganberry and the other is dewberry. We can lots and sell as much as we can. We have five horses and one colt, two cows, seven pigs, lots of chickens and four guineas. We have one hound. He keeps the coyotes away from the chickens. We did have two hounds, but something happened to one of them and we don't know where she is. One time they were after a coyote and they ran him in the river, then one of the dogs ran in the river and fought it, but I do not know if he killed it or not. We live on the banks of the Snake river. In summer we have lots of fun fishing. I have three brothers and two sisters. My brothers' names are Isaac, Tommie and Arthur. My sisters' names are Olive and Myrtle. Myrtle is married and has a nice little baby boy. He is three weeks old. Our teacher is teaching us children music at school. I would like for some of the cousins to write to me.—Elva Green, Penawawa, Wash.

Viola Joins the Corner.

Dear Aunt Nellie: My subject is to tell about our stock and school. We have nine head of cattle. The cows' names are Bell, Beulah and Lily. Lily is just a yearling. We have three other yearlings named Buster, Spot and Billy. We have three calves. Their names are Frossie, Dick and Benny. We have three horses, Charley, Nellie and Tommy. I am nine years old and in the fourth grade at school. I have a brother 13 years old. He is in the seventh grade. We go to a country school and I would not trade with any city girl. I forgot to tell you my brother's name. His name is Carl. Our teacher's name is Rose Gute. This is the first time I have written and I hope it will not be the last. Maybe my letter will be longer the next time.—Viola Thornbrue, Cloverland, Wash.

Welcome, Verna, to the Corner.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the other children's letters. I go to school and am in the fifth grade. I study grammar, spelling, geography, reading, music, arithmetic and hygiene. I am taking writing, drawing and sewing also. My teacher's name is Miss Dunn. There are only five scholars in our school. May I join the Children's Corner? I am 10 years old. Have I a twin? If I have, will they please write to me?—Verna L. Huffman, Elk, Wash.

Wener Writes to the Corner.

Dear Aunt Nellie: I have never written any before and so I thought I would try. I am 11 years old and live on a 14-acre tract. I have one sister and two brothers and their names are Theodore, Leander and Vera. We have one horse and one cow and 35 chickens. I have a dog and his name is Jack and he will play with us. I am in the sixth grade. I would like to see my letter in print.—Wener Carlson, R. F. D. 1, Box 8, Shelton, Wash.

Making Christmas Presents.

Dear Aunt Nellie: These are what I think are the answers to Kathryn's riddle: Patch upon patch and a hole in the middle—A stovepipe. As I was walking down the street I met little Dick Redcap, with a stick in his hand and a stone in his throat—The stone was a cherry pit. Upon a hill there is a mill; around the mill there is a walk; under the walk there is a key—Milwaukee. Upon a hill there is an iron horse, all saddled, all bridled, all ready to ride. I've told you his name three times in a row—All. In marble walls as white as milk, lined with a curtain soft as silk, within a crystal fountain clear a golden apple doth appear; no doors are there to this stronghold, but thieves break in and steal the gold—An egg. I have been making Christmas presents. Aunt Nellie I wish you were here to eat Thanksgiving dinner with me.—Maggie McClay, Elkton, Ore.

Help Mary Can the Kaiser.

Dear Aunt Nellie: I guess you think I am very slow to write, but I have been going to school and have been too busy. And now, concerning the Junior Red Cross. I would like to organize one at Walterville, about a mile and a half from my home. We don't get our mail there because a rural route comes right past our house. I wish all the other cousins would try to organize a Junior Red Cross. I have some plans to exchange. I think it would be nice to give a little play, after we get the Red Cross started, don't you? And charge about 5 cents admittance. I am going to can about a dozen cans of apples for mamma. I should like to know how many of the cousins can can apples. I do. And how many of the girls ever made a cake all by themselves. I have, and baked bread, too. I should like to know how many of the cousins would like to help me can the kaiser.—Mary King, Route 2, Springfield, Ore.

Hopes We Won't Lose the Corner.

Dear Aunt Nellie: I have never written to the Corner before, but I have read the letters and enjoyed them very much. I have two sisters and one brother. Their names are Roberta and Elizabeth and my brother's name is Donald. I am 9 years old and in the fourth grade. I hope we won't lose our Corner. My letter is getting long. I will close for this time.—Eloise Evans, Prairie, Idaho.

THE BARRIER

(Continued from page twenty.)

singly, in a gentle tone that Runnion had never heard before.

"Getting kind of mushy, ain't you? I thought you had passed that stage, old man."

"No, I don't like her in that way."

"Well, I do, and I'm dead sore on that soldier."

"She's not your kind," said Stark. "A bad man can't hold a good woman; he can win one easy enough, but he can't keep her. I know."

"Nobody but a fool would want to keep one," Runion replied, 'specially a squaw."

"She's just woke up to the fact that she is a squaw and isn't as good as white. She's worried."

"I'll lay you a little eight to five that Burrell has thrown her down," chuckled Runnion.

"I never thought of that. You may be right."

"If it's true I'll shuffle up a hand for that soldier."

"If I were you I wouldn't deal it to him," said the gambler, dryly. "He may not cut to your break."

Manwhile Necia had passed on out of the town and through the Indian village at the mouth of the creek, until high up on the slopes she saw Alluna and the little ones. She climbed up to them and seated herself where she could look far out over the westward valley, with the great stream flowing half a mile beneath her. She stayed there all the morning, and although the day was bright and the bushes bending with their burden of blue, she picked no berries, but fought resolutely through a dozen varying moods that mirrored themselves in her delicate face. It was her first soul struggle, but in time the buoyancy of youth and the almighty optimism of early love prevailed; she comforted herself with the fond illusion that this man was different from all others, that his regard was equal to her own, and that his love would rise above such accidental things as blood or breed or birth. And so she was in a happier frame of mind when the little company made their descent at mid-day.

As they approached the town they heard the familiar cry of "Steam-boo-o-at," and by the time they had reached home the little camp was noisy with the plaint of wolf dogs. There were few men to join in the welcome today, every able-bodied inhabitant having disappeared into the hills, but the animals came trooping lazily to the bank and sat down on their haunches watching the approaching steamer, in their soft eyes the sadness of a canine race of slaves. Behind them limped a sick man or two, a soldier from the barracks, and in the rear a fellow who had drifted in the week before with scurvy. It was a pitiful review that lined up to greet the tide of tenderfeet crowding toward their El Dorado, and unusual also, for as yet the sight of new faces was strange in the north.

The deserted aspect of the town puzzled the captain of the steamer, and upon landing he made his way at once to John Gale's store, where he learned from the trader of the strike and of the stampede that had resulted. Before the recital was finished a man approached and spoke excitedly.

"Captain, my ticket reads to Dawson, but I'm getting off here. Won't you have my outfit put ashore?" He was followed by a group of fellow-passengers who made a similar request.

"This place is good enough for me," one of them said.

"Me, too," another volunteered. "This strike is new, and we've hit her just in time."

Outside a dozen men had crowded "No Creek" Lee against the wall of the store and were clamoring to hear about his find. Before the tardy ones had cleared the gangplank the news had flashed from shore to ship, and a swarm came up the bank and into the post, firing questions and answers at each other eagerly, elbowing and fighting for a place within earshot of the trader or the ragged man outside.

The frenzy of a gold stampede is like the rush from a burning building, and equally easy to arouse. No statement is too wild to lack believers, no rumor too exaggerated to find takers. Within an hour the crew of the steamer was busy unloading countless tons of merchandise and baggage billed to Dawson, and tents began to show their snowy whiteness here and there. As a man saw his outfit appear he would pounce upon it, a bundle at a time, and pile it by itself, which resulted in endless disputes and much confusion; but a spirit of youth and expectancy permeated all and prevented more than angry words. Every hour the heaps of baggage grew larger and the tents more numerous.

Stark wasted no time. With money in his hands he secured a dozen men who were willing to work for hire, for there are always those who prefer the surety of ten coined dollars to the hope of a hundred. He swooped down with these helpers on his pile of merchandise that had lain beneath tarpaulins on the river bank since the day he and Runnion landed, and by mid-afternoon a great tent had been stretched over a framework of peeled poles built on the lot where he and Necia had stood earlier in the day. Before dark his saloon was running. To be sure, there was no floor, and his polished fixtures looked strangely new and incongruous, but the town at large had assumed a similar air of incompleteness and crude immaturity, and little wonder, for it had grown threefold in a day. Stark swiftly unpacked his gambling implements, keen to scent every advantage, and out of the handful of pale-faced jackals who follow at the heels of a healthy herd he hired men to run them and to deal. By night Flambeau was a mining camp.

Late in the evening the boat swung out into the river, and disclosed a strange scene of transformation to the puzzled captain of a few hours ago. The river bank was lined with canvas shelters, illumined dully by the tent lights within till they looked like a rest of glowworms in deep grass. A long, hoarse blast of good wishes rose from the steamer, then she sighed her way around the point above, bearing forth the message that a new camp had been born.

(To Be Continued.)

FREDERICK & NELSON,
Seattle's Department Store,
Offers an Opportunity for

Christmas Shopping by Mail

You have practically the same facilities for selecting merchandise as enjoyed by our resident customers if you will use

Our Mail Order Shopping Service

Orders by Mail, Telephone or Telegraph are given the same thought and care as would be exercised if you were shopping in person.

Just now the store is especially bright with useful, "givable" articles that suggest

SPLENDID HOLIDAY GIFTS FOR MEN, WOMEN AND CHILDREN.

Let us know your requirements and we will gladly send you full particulars regarding assortment, prices, etc., by return mail.

We prepay shipments on dry goods by parcel post to any point in the state.

Seattle, Washington.

News for Breeders

William Neuenschwander of Gaston, Ore., is one of the few men in western Oregon breeding large Yorkshire swine. His Yorkshires are typical of the breed, having long bodies, good backs and the Yorkshire head. His foundation sow, Rose of Coldstream, was bred in California, but goes back to noted ancestors in Canada and Minnesota.

During the Northwest Live Stock show at Lewiston, Idaho, W. G. Cordiner of Walla Walla, Wash., purchased the first, second and fourth prize Duroc Jersey sow pigs from Robert Nelson of North Yakima. Mr. Cordiner, who has leased his big ranch and purchased 160 acres near Walla Walla, will raise a few purebred Duroc swine, Shropshire sheep and probably beef cattle.

H. D. Fuller of Dayton, Ore., has for his Jersey herd sire a half brother to McArthur and Stauff's well-known bull, Holger, and G. G. Hewitt, Rinda Lad. He is pronounced by good judges to be even a better individual than either of the others and at any rate he has the blood of the famous Gertie Lad, that seems so prepotent. Mr. Fuller has a small herd of Jersey cows of the St. Lambert strain, the foundation for which he brought from Iowa with him.

During the Oregon state fair F. M. Kiger of Portland purchased from J. W. Fruit of Brooks, Ore., the junior champion Duroc Jersey boar, Fruit's Climax, paying $150 for him. Mr. Fruit, who bred, developed and showed the hog, also won junior championship last year and sold last year's boar to go to California for $150. Fruit's Climax has length, depth of body, a very neat head, short neck and about everything that makes a good Duroc. Mr. Fruit, who has been very successful in the show ring, won first on young herd in 1913, 1914, 1916 and 1917. In 1915 he did not show hogs to fill the class. During the fair Mr. Fruit also sold a fine young gilt to Nathan Hamilton, a Chehalis, Wash., Holstein breeder, one to H. E. Mullen and neighbor, Crabtreet, Ore., one to John Minto, Clackamas, Ore., and one to O. L. Dunlop of Salem. Some of these were out of Lucy Wonder, a sow for which Mr. Fruit paid $250 in the east. H. A.

A Champion Winner.

The above photo shows the Baldwin Sheep company Rambouillet ram No. 2643, bred at their home ranch at Hay Creek, Ore. The photo was taken at the Prineville, Ore., fair, where the ram won grand championship. The grandparents on the dam's side and the great-grandparents on the sire's side were imported, and on the sire's side, especially, some of the most noted animals of the breed show in the pedigree.—H. A.

Wilson Sale of Poland Chinas.

The sale of purebred Poland China hogs, recently held by Wilson Bros., of Greenleaf, a few miles west of Caldwell, Idaho, was successful and satisfactory in every way. Some 50 purebred animals of their own breeding were sold by the firm, and a considerable number of them were shipped to Oregon and Washington points. Wilson Brothers hold a regular annual sale of purebred swine, in which they catalog stock of excellent breeding, and the event is looked forward to with interest by swine raisers.

A. L. Wilson, manager of the firm, is a recognized authority on swine and a breeder of extended experience. He was the superintendent of the swine department of the Northwest Live Stock show this year.

Choice Poland Chinas

Weaned pigs, $10; 60 lbs., $15, and the best bronze turkeys in the state. Magnificent markings. Pearl guineas. Toulouse geese.

E. A. KRUSE. Roseburg, Oregon.

See Fine Stock

Parades of Horses and Cattle

By HORACE ADDIS.

The many parades of the horses and cattle during the Northwest Live Stock show at Lewiston, both in the big horse tent and in front of the grandstand, gave the visitors an excellent opportunity to see the stock to the best advantage. Both owners and herdsmen were very accommodating, bringing the stock out without grumbling on all occasions.

The annual banquet on Monday night was largely attended, as usual, and, besides the felicitous addresses and musical program, the pledging of nearly $5000 for next year's show proved the practicability of the banquet. This show has come up through many trials and hardships to where it is now. It has state aid and is so firmly established there is no question of its continuance.

Day & Rothrock of Sprague, Wash., won grand championship on fat steers. The winner is a purebred Shorthorn and he defeated a Hereford shown by the University of Idaho, the two having won championships for their breeds. There was much good natured rivalry between the herdsmen of the two breeds and they say it has got to be done all over again at the Portland show.

Secretary Paul Clagstone, whose efficient work did so much to make the Northwest Live Stock show at Lewiston a success, has been sent to Chicago to attend the International Live Stock show and to attend a number of meetings of breed associations which are expected to add special prizes or extra money to next year's premiums.

The horse show Monday night was not only a grand showing of magnificent horses, but it had a patriotic flavor. Patriotic airs by the band and patriotic songs were the order and when the song, "America, Here's My Boy," was rendered by a local celebrity riding a beautiful stallion decorated with the national colors, the enthusiasm knew no bounds. George Wilson delivered a short, practical talk on the utility of the horse. The prize cattle were paraded and talks on the different breeds were made by A. D. Dunn, Harry Summers and others.

The sheepmen exhibiting at the Northwest Live Stock show took the initiative in the organization of a sheepmen's association, one of the objects being to hold a sheep sale at the show next year.

The handsome silver cup given by the Farmer for the premier herd of Shorthorn or Hereford cattle—that is, the herd having the greatest number of points, based on their awards, was won by the A. B. Cook herd of Townsend, Mont.

The Lewiston Poultry show was held inside the stock show grounds. About 500 birds were on exhibition. Rhode Island Reds having by far the largest number of any breed shown. But practically all the utility breeds and a few of those classed as fancy were represented. The show was a decided success and had a stream of visitors at all times.

The herdsmen presented Auctioneer Harry Cranke with a gold pin and a card case. This was in recognition of their gratitude for the banquet Harry gave them the early part of the show.

The Poland China breeders petitioned their record association to authorize a "roundup" futurity at the Northwest Live Stock show next year. Idaho, Oregon and Montana already have Poland China futurities and the idea is to round up the best young stock—the prize winners from the three states at the great show. It is a fine idea and ought to have recognition.

The price of 20 cents a pound for the champion carload of fat hogs at the Lewiston Stock show is the highest price ever paid for hogs in the Pacific northwest. E. S. Sweet of Grangeville, Idaho, showed the first prize car of heavy hogs and Robert Nelson of North Yakima, Wash., the first prize car of light hogs. Mr. Sweet's load won the championship. But under present conditoins 20 cents is only a little above the market. Will the champion car at the Portland show beat it?

The Poland China and Duroc Jersey men all report good sales of stock, running up into many hundreds of dollars.

The directors at their annual meeting, during the show, reelected Mr. Wren, president; R. C. Beach, treasurer, and Paul Clagstone, secretary. Dean Iddings of the University of Idaho was elected vice president, in place of D. S. Wallace, who refused to stand for reelection. Mr. Wallace was presented with a handsome gold watch by the exhibitors and others connected with the show.

Breeders' Department

HOLSTEIN CATTLE

Registered Holsteins

Both sexes for sale. Bulls include some 30-pounders from Grand Champion sire and dam, others with 15 nearest dams averaging 25 and 27 lbs. Prices low. Write promptly to

H. R. BOOMER, New Plymouth, Idaho.

BATTEN'S S. C. REDS

I have 50 of the best cockerels that I have ever seen in one yard that I am offering at low prices, quality considered, in order to move them quickly to make room for younger stock. Prices range from $5 to $15 and can give you good selection if you will write me your wants. Can spare a few good pullets at $2.50 each. Let me hear from you.

E. F. BATTEN, HOOD RIVER, ORE.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Nov. 26.—Increasing supplies had a bearish effect today on corn, but talk of big export sales of oats formed something of a counterpoise. Corn finished unsettled, 121¾ January and 119⅝ May with the close as a whole ranging from ¾ decline to ⅝ advance compared with Saturday's latest figures. Oats gained 1 to 1½ net. The outcome in provisions varied from a setback of 12 to a rise of 27.

Chicago Futures.

Portland Market.

PORTLAND, Ore., Nov. 26.—Thanksgiving turkeys were firm at 30 cents for No. 1 at the close of the week. Arrivals were quite large, but everything of good quality cleaned up well on shipping orders, mostly for Seattle. The trade here expects this price to be maintained up to the close. A good many cull birds are coming in, showing that farmers are willing to take a chance at marketing their turkeys rather than feed them at the present price of grain. Retailers says the retail price will not go over 35 cents.

Live poultry has sold well at firm prices, except live turkeys, but not many of these have come in.

Country dressed meats were fairly steady at the close.

There is a small shipping demand for eggs for the first time in weeks. Fresh ranch receipts are light, but storage is freely offered.

A sample shipment of Australian butter was received from San Francisco and pronounced by experts to be good notwithstanding the long time in transit. Country creamery butter was scarce and with a better demand sold up to 44 1-2 cents at the close of the week. Prints were unchanged and can hardly go higher, despite the strength of cubes, owing to price cutting in the retail trade.

The cheese market is firm for the best grade, but much poor cheese is offering here for which there is no demand.

Potato shipments have practically ceased, owing to the car shortage, though a few cars of red seed potatoes are being dispatched to California. The shipping movement in onions has also stopped.

Beans are weaker and about a cent lower. The trade is buying only for its immediate needs.

Although hide markets in the east have slumped, dealers say northwestern buying prices will hold until the first of the month.

The hop market is entirely neglected and quotations are nominal and lower.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

[illegible]—No. 1, $53 per ton.

[illegible] per ton; shorts, [illegible]

[illegible]o. 1 feed, $52.50; brewing, [illegible]

[illegible]ying prices: Timothy, eastern, $27; alfalfa, $22.50@24;

[illegible]gon ranch, case counts, [illegible]; candled, 55@[illegible]

[illegible]ens, 17 1-2@20c; ducks, 18 [illegible]eese, live, 22c; geese, 13@[illegible]

[illegible] prints, 45@[illegible] extras, 41@[illegible]

[illegible] triplets, 23c; [illegible]

[illegible] 15@15 1-2c; [illegible]

[illegible] 1917 crop, 20c. [illegible]gon, buying price, [illegible]

[illegible]— Eastern Oregon, 40@65c; [illegible] 50@60c.

Buying prices: Oregon navy, [illegible] Washington, 9c; colored, 8c.

Seattle Market.

SEATTLE, Nov. 24.—Seattle jobbers have been advised today that many of the sacks of spuds shipped in here and believed to be field run have actually been graded to No. 1 and No. 2 and it is stated on good authority that were all the Yakima spuds to be scaled to No. 1 there would not be 25 per cent of a crop. This situation, which has been disclosed after careful investigation, explains in a measure the abnormally high prices of stock in eastern Washington.

Nevertheless current quotations can not prevail for long, and growers themselves are becoming reconciled to the fact. Quotations of $25@28 f. o. b. shipping point are now in the hands of Seattle merchants. The car shortage, however, is constantly getting in the way of delivery. Shippers say it is practically impossible to secure rolling stock in which to move stock to this market. Blighted and scabby spuds are quoted at $20, Yakima shipping points. Puget Sound growers stand firm at their quotations of 30 days ago, or $30 f. o. b. The week has closed without any appreciable change in price conditions and a sharply constricted local movement.

Turkeys are arriving in increasing volume from Idaho shipping points, and the market is steady at 20c country price, Idaho, and 28@30c delivered Seattle. Jobbers continue to quote 35c to the trade.

The crop is believed to be heavy, but the condition of the birds will not be as good as for the holiday trade.

The egg market is weak. There is no commodity so erratic today as fresh ranch eggs, which is governed solely by the daily supply and demand. Occasional bids over the market are made by packers and by local jobbers in getting stock hurriedly for the Alaska trade. Some of the jobbers are able to get all the stock required at 54c, while others are paying 2 cents more. There is a growing conviction that Chinese eggs, due to begin arriving next month, will exert considerable influence this year in the domestic trade. Information has reached Western avenue that the egg industry in China has been readjusted, and that the feed supplied to the birds is principally rice. Influence of Americans in the production of Chinese eggs at work for three years has resulted in what is regarded as a vast improvement in sanitary methods of production.

The butter market is slightly firmer for the week-end. The local demand has increased. Storage butter is enjoying a brisk movement.

[illegible] PRICES.

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

[illegible]gs—Local, 56c per dozen, pullets, 45c dozen.

Poultry—Live hens, fat, over 4 lbs., 21@22c per lb.; 4 lbs. and under, 17@19c; old roosters, 14c per lb.; squabs, large, $3.50 per dozen; geeze, fat, live, 15c per lb.; springs, live, fat, 21c per lb.; hens and young tom turkeys, 28@29c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 16@18c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; heavy, 9@13c per lb.

Hides—Salted, 18c per lb.; flint-dry hides, 32@33c per lb.; salt kip, 18c per lb.; green hides, 15c per lb.; green calf, 28c per lb.; dry calf (under 5 lbs.), 34c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry full wool sheep pelts, 36@38c per lb.; salt bulls, 14c per lb.

Spokane Market.

High grade turkeys raised in the Inland Empire for the Thanksgiving table will sell at 35 cents a pound, the same as last year.

The dealers say that some sound birds not quite up to first grade will be retailed at 32 cents or even a little less.

Inquiry failed to discover the fate of the 8000 pounds of turkey which was reported to be in cold storage in this city and which must be disposed of before January by order of the food commissioner.

The prices of other poultry suitable for the season are: Capon, 33 cents a pound; geese, 23 to 25 cents a pound; ducks, 25 to 28 cents; roasting hens, 23 to 25 cents, and broilers, 30 cents a pound.

Except for turkeys the prices are somewhat tentative and may undergo some changes in the week. The prices are a little higher than last year.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices paid to the producer.

Potatoes—New local potatoes, $1.75 cwt.; sweet potatoes, $3.25@3.50 cwt.

Apples—Local cating apples, $1.75@1.50; cooking apples, $1 box; Delicious, $1.75@2.50; Red Macintosh, $1.50@1.75 box; Winter Bananas, $2 box; Jonathans $1.25@1.35 box; Wagners, $1.25@1.35 box; Rome Beauties,, $1.25@1.35 box; Spitzenbergs, $2@2.25 box; King Davids, $1.25@1.35 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, [illegible] lb; Wisconsin limburger, 32@33c lb; brick cheese, 34c lb; domestic Swiss, 35c lb; Young Americas, 26c lb.

Eggs—White filler, guaranteed, $13.25 case; selected storage, $[illegible].50.

Live Poultry—Hens, 13@[illegible] lb. broilers, 20c lb; old roosters, 9c lb; [illegible] lb; geese, 9c lb; turkeys, 22@25c lb.

Dressed Poultry—Hens, [illegible] lb. broilers, 22c lb; old roosters, 11c lb; [illegible] lb; geese, 11c lb; turkeys, 27c lb.

Hide Quotations.

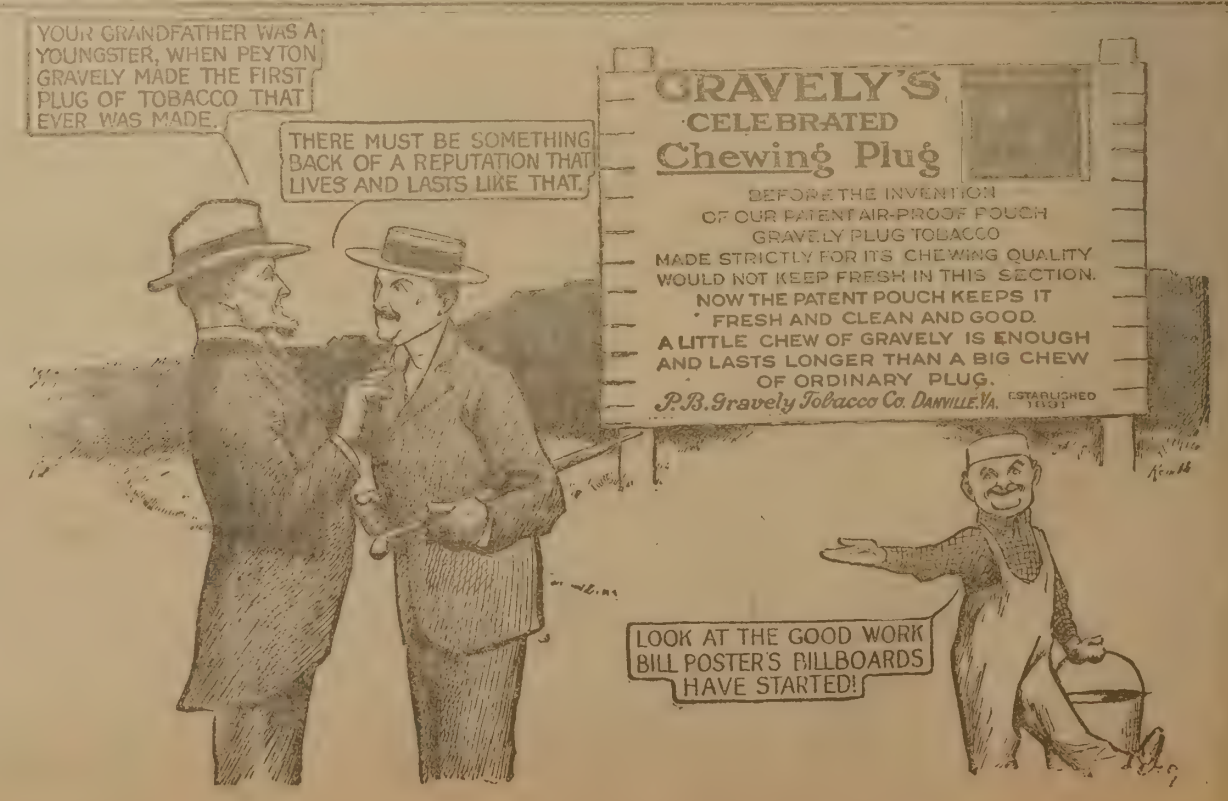
Green Cows and Steers—25 lbs. and up, 13c; salted cured, 16c; [illegible] bulls and stags, 11c; salted cured, 13c; [illegible] 15 lbs to 25 lbs, 22c; calf skins up [illegible]; dry flint hides, 30c; d[illegible], 30c; dry calf skins, under 7 lbs, 3[illegible] pelts, 35@40c; dry shearlings, 10c; [illegible] horse hides, $1@2 each; [illegible], $2.50@4 each.

The Wool Market.

BOSTON, Nov. 23.—[illegible] Bulletin will say tomorrow:

"Trading in the local wool market has been within restricted limits this week, although almost [illegible] of wool has been in request. [illegible] very firm throughout the week.

"Manufacturers report [illegible] percentage of machinery [illegible] engaged on military contracts. [illegible] wools are being [illegible] southwest at prices [illegible] to 54c."



Soured basis:

California [illegible]; middle county, [illegible]

Oregon: Eastern [illegible], eastern clothing, $1 [illegible] 1, $1.60@1.65.

Territory, fine [illegible] 1-2 blood combing, [illegible] blood combing, $1.45@[illegible]ing, $1.60@1.65; fine [illegible] $1.55@1.60.

Pulled extra, $1.80@[illegible] 1.80; A supers, $1.60@1.[illegible]

MAXWELL

Most Miles per Gallon **Most Miles on Tires**

A Great Farm Tool —the Maxwell Truck

Mechanical devices to take the place of human hands and muscles—these are vital necessities on the farm today.

The farmer is a manufacturer—a manufacturer of food products.

American farmers, too, are business men, applying efficiency methods.

The world is crying for the products of our fields.

The yield MUST be multiplied.

And human labor is becoming more than ever difficult to get.

The efficient, economical, durable Maxwell one-ton truck is doing a splendid part in meeting this emergency.

It is bringing goods from the field—from the barns—from the granaries—to market at a speed our fathers, with their slow horse-drawn wagons, never dreamed of.

A Maxwell truck covers, in one day, twice the mileage of TWO TEAMS with their two drivers—and does it at the cost of one team.

A Maxwell truck saves TIME—LABOR—MONEY.

It increases the yield of a farm—and increases, too, the NET PROFITS of that farm.

And it is sold at a price that can't be touched by any other motor truck of anything like its mechanical efficiency and economy of operation.

The specifications and measurements of the Maxwell truck equal or surpass any truck sold for $1,500.

Be sure to inform yourself about the construction of this great vehicle before buying any truck.

No progressive farmer-business man can AFFORD to be without a Maxwell truck today.

Maxwell one-ton chassis $865; Chassis with cab and windshield $900
Chassis with cab, windshield, and stake gate body $950
All prices f. o. b. factory

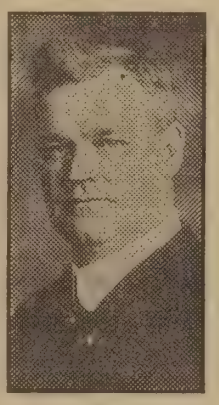
Red Cross Starts Great Membership Campaign

Governor Lister Joins in The Washington Farmer's Appeal to Aid Humanity's Cause

"YOU can not make too strong an appeal to your readers in behalf of the Red Cross. I gladly join The Washington Farmer in urging every citizen, old and young alike, to accept his or her share of responsibility in this great work."



These are the words of Governor Ernest Lister in discussing that organization's world-wide activities with a representative of The Washington Farmer. By reason of his office, Governor Lister is head of the Red Cross in this state in the same manner that President Wilson is for the nation as a whole. Enthusiastic in the cause to which the association is dedicated, he continued:

"The Red Cross is the one great, humanitarian factor in alleviating the suffering caused by the present world war, and to whatever extent an individual lends his aid, to that extent is he or she helping to alleviate that suffering.

"It is peculiarly an American institution—the American Red Cross. But it is no respector of persons either in giving or receiving. It ministers to the sufferer without asking his name, nationality or creed, though, of course, the greater part of its work is now for the wounded or sick soldiers of the United States or of her allies. It makes its appeal for support in the same universal way. It is entirely non-sectarian and undenominational. It receives no financial support from the government, though the president and other officials give of their means and time to it. Its only source of money with which to carry on its work of humanity is the private citizen, and all over this land today men and women and boys and girls are rallying to it with membership dues, special contributions and time and labor.

"There is right now, just at the approach of the Christmas season, a nation-wide movement for increased membership that should result in the addition of thousands of names to the roll of members in this state. There is great need for funds to meet the responsibilities that the organization has assumed, and there is the ever-increasing need for workers in every city and village and country community, workers to prepare bandages and hospital supplies and to knit woolen socks and sweaters for American soldiers who are rapidly being called to the trenches of Europe.

"You can not make too strong an appeal to your readers in behalf of the Red Cross. I gladly join The Washington Farmer in urging every citizen, old and young alike, to accept his or her share of responsibility in this great work. In the cities it is not difficult to present an appeal like this, but in the farming districts where homes are scattered, there is need of special means and special effort. Where the Red Cross gospel has gone, city and country residents alike have responded unhesitatingly, and I know that those to whom you present the appeal will respond loyally and effectively."

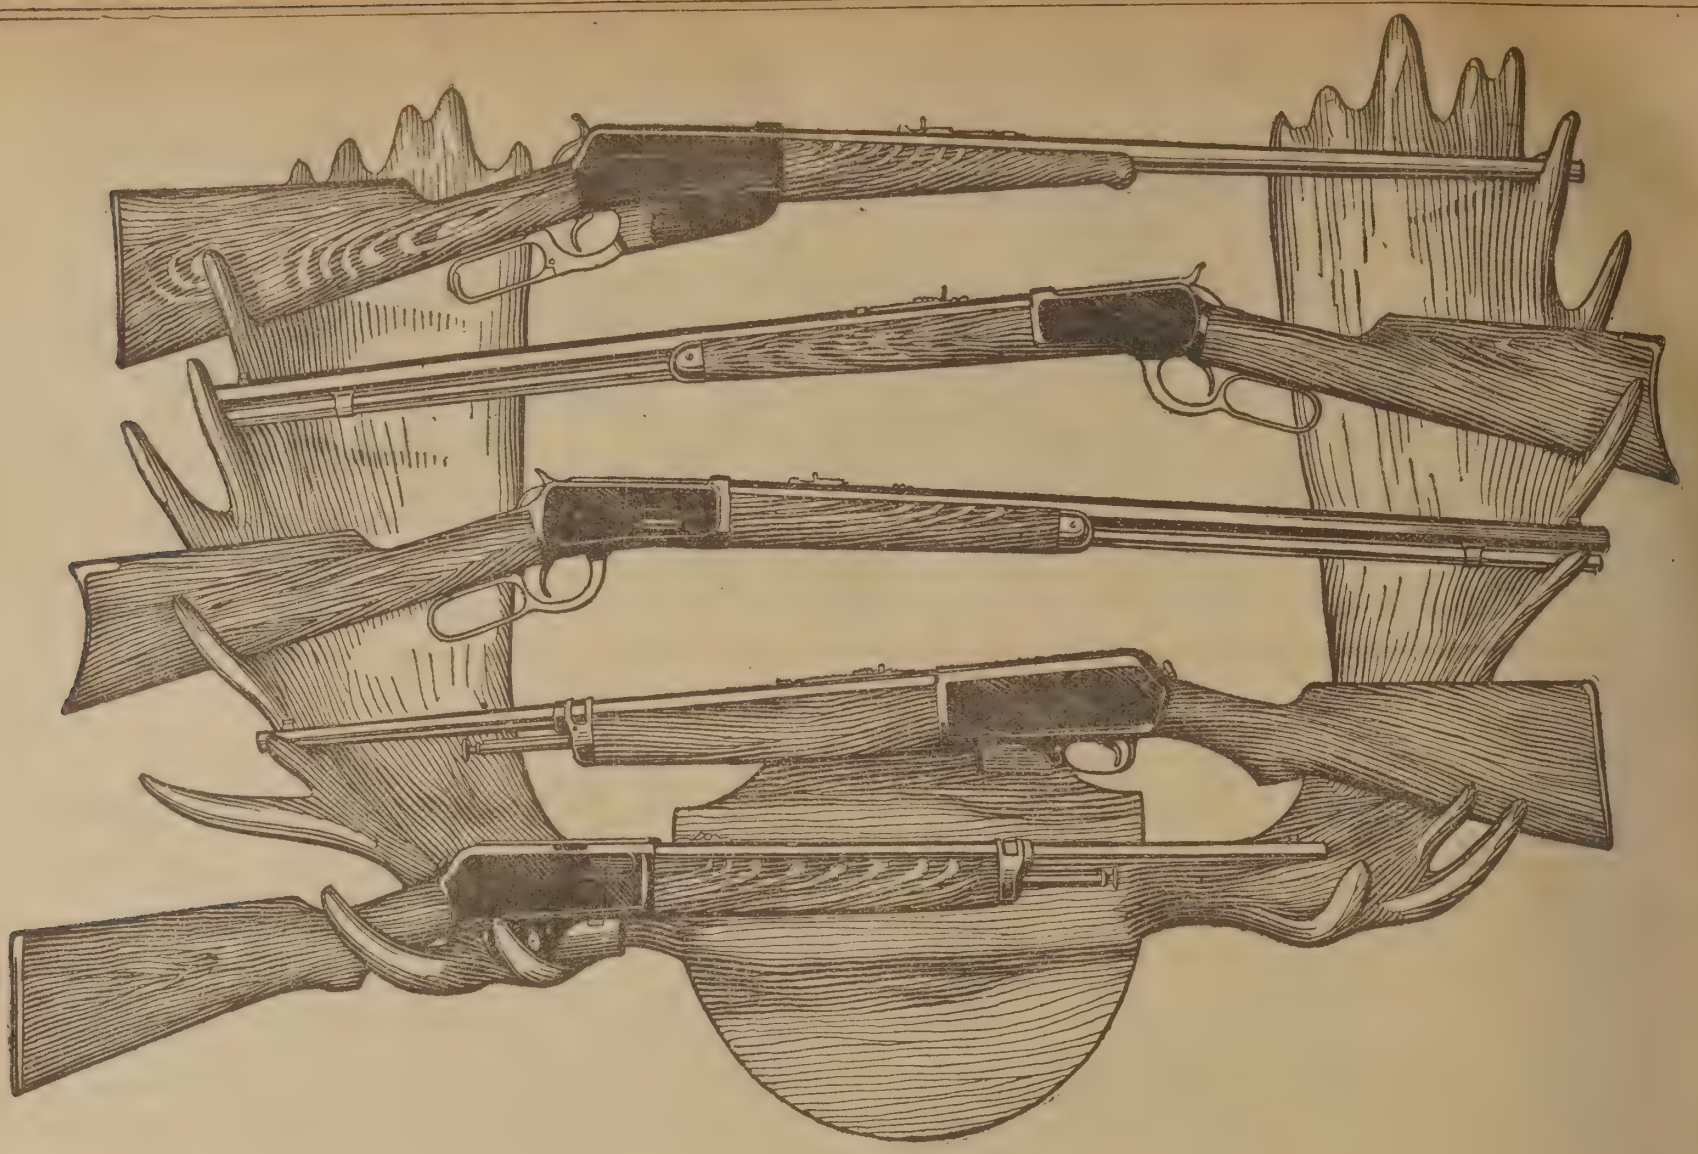
Gov. Lister.

The nation-wide campaign for membership in the Red Cross begins December 15 and continues until Christmas eve, by which date it is the hope of leaders that the membership may be increased by nearly 10,000,000. Everybody is eligible to membership. The appeal is made to no class. The only credential required is a willingness to be of service in the great work of relieving suffering and minimizing to some extent the horrors of war for the soldiers of America now abroad or about to be called abroad to fight for human rights.

It is the hope of the state headquarters of the Red Cross to have a great organization in every large city and a little band of workers in every village and country community in Washington. With a view to assisting in carrying out that aim, The Washington Farmer is offering its readers, and urging upon their attention, an opportunity to ally themselves

Continued on page three.

The Red Cross Needs Your Aid



I am glad to express my patriotism at this time by pledging myself to render whatever special service I can to my country, and will you tell me especially about Red Cross work and the different ways in which I may be able to aid in that work?

Name .....

Postoffice .....

It is up to every reader of this paper—man, woman, boy or girl—to take this pledge.

Fill out the above coupon and mail it to the Editor of The Washington Farmer, Spokane, Wash. Upon receiving this coupon The Farmer will be glad to send you the desired information regarding Red Cross work, and in recognition of your pledge of patriotism to your country, will enroll you as a member of the Patriotic League of The Washington Farmer.

Five famous models of the world's greatest rifle makers

Here are five Winchester models, famous alike among old pioneers and sportsmen and the hunters today. These are the outcome of the old Winchester rifles that "built the West."

As the need grew, Winchester originated a model and a caliber for every purpose. Today Winchester makes a greater variety of rifles and shotguns than any other small-arms manufacturer. But the five particular models shown on this page continue to be the standard all over the country.

In the *Model 95* (at the top) the sportsman finds his most powerful weapon. This lever-action, box-magazine, repeating rifle shoots the heaviest army cartridges. Made for .30 Army, .30 Gov't Models 1903 and 1906, .303 British, and .35 and .405 Winchester Cartridges. Its high velocity and flat trajectory develop tremendous killing power at long range. Every sort of wild beast in the world has been instantly killed by this powerful sporting rifle. Nickel steel barrel.

The *Model 92*, second from the top, is a lever-action repeating rifle, made solid frame or take-down. It embodies the principles of construction of the famous rifle that was Winchester's contribution to the winning of the West. This rifle shoots standard types of ammunition that can be purchased wherever firearms are sold. Made for .44, .38, .32, and .25-20 W. C. F. Cartridges.

The next is the famous *Model 94*, the all-'round lever-action repeating rifle. It is the most popular with sportsmen and farmers because it shoots the famous .30 Winchester high-power smokeless cartridge, light in weight, but with high stopping power, and easily obtained. It is also made to handle the .25-.35, .32 Winchester Special, .32-.40 and .38-.55 cartridges. Made with nickel steel barrel to handle the high-power cartridges.

The *Model 10*, next shown, is a hammerless, take-down, self-loader. Shoots only its own Winchester .401 Self-loading cartridges. Hits a harder blow than any other self-loader made. Every working part made of nickel steel. Shoots five knockdown shots as fast as the trigger can be pulled and will down any beast found in North America.

At the bottom is the *Model 07*, the "little brother" to the Model 10. Shoots only its Winchester .351 Self-loading cartridges. The best self-loader for deer hunting and for all except the very biggest game.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a rifle lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest and lowest priced Winchester guns. With Winchester the barrel *is* the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

The Winchester barrel

The barrel of every Winchester rifle has been bored to micrometer measurements for the cartridge it is meant to shoot. In rifling the barrel the exact twist that is necessary to produce the best results with every cartridge has been mathematieally calculated and is verified by exhaustive practical tests before leaving the factory.

A bullet fired from a Winchester barrel spins point on with unerring accuracy the limit of its range.

The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

What (P W) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with 50 years of gun-making reputation behind it.

Every rifle that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and with excess loads for strength. At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

Write for details of Winchester rifles, shotguns and ammunition

The Winchester catalog is an encyclopedia on rifles, shotguns and ammunition. It gives detailed specifications of these five famous models shown here and describes at length the principles on which every one of the world-renowned Winchester rifles and shotguns is built. Write today. We will mail you a copy free, postpaid.

Thrift Savings Easy and Safe

Small Investor May Help Himself and U. S.

Let us all climb aboard Uncle Sam's thrift and war savings wagon. He is making it as easy as the purchase of postage stamps and the investment will be as safe as the holding of gold pieces, and more profitable, for it is nontaxable and will bear 4 per cent interest. And you can always get your money back on demand.

The campaign starts this week, and a quarter of a dollar will start you in the game.

This opportunity is for the small investors of the land—the class, whether living in the city or the country, that has been plundered too often by all sorts of get-rich-quick concerns. It is what the farmers, and their wives, sons and daughters have been wanting all these years.

Any person may invest amounts as small as 25 cents at a time at postoffices, banks or trust companies, at most railroad stations, stores and factories and at many other public places where accredited persons will act as authorized selling agents. At the average 1918 selling price such certificates will yield 4 per cent interest, compounded quarterly. The certificates will be dated January 2, 1918, and will mature January 1, 1923. The entire wealth and security of the United States is behind them.

No person may purchase at one time more than $100 worth or hold at the time more than $1000 worth of these certificates.

These obligations of the United States will be evidenced by stamps of two denominations—a war saving stamp costing from $4.12 to $4.23, according to the month in which purchased, and having a maturity value of $5, and a thrift stamp costing 25 cents.

During December, 1917, and January, 1918, war savings stamps will be sold for $4.12 each. At the beginning of each of the succeeding months of 1918, starting February 1, the cost of a stamp will increase 1 cent a month. All war savings stamps issued during 1918 will mature on January 1, 1923, when they will be redeemed at $5 each.

With the first war saving stamp bought the purchaser will be given a war savings certificate containing spaces for 20 such stamps. If the 20 spaces are filled before February 1, 1918, the cost will have been $82.40 for the filled certificate and on January 1, 1923, the government will redeem the certificate at $100.

Will Sell Thrift Stamps.

Thrift stamps, costing 25 cents each, are to be affixed to thrift cards, which will be supplied without cost. The card when filled, at a cost of $4, may be exchanged for a war savings stamp bearing interest at 4 per cent, compounded quarterly merely by turning the card in at the postoffice, bank or other sales agency and paying the difference between $4 and the current price of a war savings stamp. The privilege of surrendering a certificate to the government and receiving the cost thereof plus interest has been provided for those who may later find themselves in need of their money.

Upon 10 days' written notice after January 1 1918, postmasters will pay off certificates at their cost to purchasers plus an increase of 1 cent a month on each war savings stamp on the certificate surrendered, as shown by a table of value appearing on the certificate. Under this plan it will be impossible for a certificate or the stamps to depreciate in value, nor can there ever be any question that it is worth the price shown thereon.

President Wilson has given this plan his cordial approval and has appointed a national war savings committee to manage it, with Frank A. Vanderlip, who is serving the country without salary to manage it.

The president also has appointed state directors in all the states of the Union. Directors for the Pacific northwest are:

Montana—H. W. Turner, Butte.
Idaho—James H. Hawley, Boise.
Oregon—C. H. Jackson, Portland.
Washington—Daniel Jelleher, Seattle.

An intensive campaign will be conducted in every state and the government hopes to reap loans totaling $2,000,000,000 within a year. The campaign opened formally December 3.

It is expected that the people of Washington will buy $31,000,000 worth of these stamps. The apportionment, based on population figures given by the census bureau for July 1, 1917, for the various counties of the state is as follows:

Counties—	Est. Pop.	Min. Sales.
Adams	15,359	$ 307,180
Asotin	7,631	152,620
Benton	7,937	158,740

Totals	1,558,808	$31,176,160

New Income Tax Explained

What the Law Says You Yourself Must Do

The new income tax law will reach more than 7,000,000 persons who have never before paid a federal income tax. Hundreds of thousands of farmers who were exempt before will have to pay taxes now.

In brief, the law requires that every unmarried person who had a net income in 1917 of more than $1000, and every married person whose net income was more than 2000, must make a return to the collector of internal revenue for his district. He can not wait for the collector to call on him or send him a notice. He must voluntarily apply to the collector for the income tax form and make his sworn return on or before the first day of March each year. Severe penalties are provided for failure to make such returns. Section 18 of the law says:

"That if any individual liable to make the return or pay the tax aforesaid shall refuse or neglect to make such return at the time or times hereinbefore specified in each year, he shall be liable to a penalty of not less than $20 nor more than $1000."

The penalty for making a false return is a fine not exceeding $2000, or imprisonment not exceeding one year, or both, in the discretion of the court, with the costs of prosecution.

The following table shows the amount of federal income tax on various net incomes under the law of 1916, and after the passage of the federal war revenue law of 1917:

Income of married person, no children under 18	Amount of tax under 1916 law.	Total tax after passage of 1917 law.
$ 2,500	No tax	$ 10
3,000	No tax	20
3,500	No tax	30
4,000	No tax	40
4,500	$ 10	60
5,000	20	80
6,000	40	130
7,500	70	205
8,000	80	235
9,000	100	295
10,000	120	355

For each dependent child under 18 an additional $200 exemption is allowed in computing the so-called normal tax under each of the above laws.

If single the computation would be based on a $1000 exemption instead of $2000.

In determining your net income you are permitted to make the following deductions from your gross income:

First—The necessary expenses actually paid in carrying on any business or trade, not including personal, living or family expenses.

Second—All interest paid within the year on your indebtedness.

Third—Taxes paid within the year imposed by the authority of the United States, or its territories or possessions, or any foreign country, or under the authority of any state, county, school district or municipality, or other taxing subdivision of any state, not including those assessed against local benefits.

Fourth—Losses actually sustained during the year, incurred in your business or trade, or arising from fires, storms, shipwreck or other casualty, or from theft, when such losses are not compensated for by insurance or otherwise.

Fifth—Losses sustained in transactions entered into for profit, but not connected with your business or trade.

Sixth—Debts due to the taxpayer actually ascertained to be worthless and charged off within the year.

Seventh—A reasonable allowance for the exhaustion, wear and tear of property arising out of its use or employment in the business or trade.

Red Cross Starts a Great Campaign

(Continued from page one.)

with the movement. Not only does it strongly recommend that every one possible become a member of the Red Cross, but it assumes the responsibility, as indicated in the pledge card accompanying this article, of seeing that every reader desiring it is supplied with definite information as to how best to render service to that organization, and through it to those who are accepting the far greater responsibility of defending right and liberty on foreign soil.

Welcome Sounds.

There was not a sound in the house except the ticking of the clock. Mary was sitting on the floor, disconsolately playing with her doll. Suddenly there was a vigorous stamping of small feet on the porch. "Oh," exclaimed Mary, with a sigh of relief, "it makes me so delightful to hear Bob's foot-tracks."

Hog Prices to Determine Yield

Farmers Hold Back for a Reasonable Profit

Ira P. Whitney, J. R. Shinn and Ralph Cohen were named a special committee of the agricultural committee of the Spokane Chamber of Commerce Monday to take up the matter of hog prices for 1918 which the food administration is now considering. Members feel that the price likely to prevail should be named at an early date, as farmers are reluctant to purchase brood sows and go into hog raising until assured of a price that will yield a reasonable profit.

W. T. Day, F. W. Anderson and J. R. Shinn were named another special committee to investigate the drafting of young farmers for military service that would work against the increased food production campaign for 1918 if carried out to any appreciable extent. The committee is not attempting to interfere with the work of the exemption boards in any way and hopes to cooperate with them in the patriotic service of putting men where they are most useful. Some agricultural sections fear an acute labor shortage next spring if the ordinarily available farm labor is pressed into military service. This committee will make a report to the trustees at the meeting on Friday.

GRAIN MEN TO MEET.

Pullman Will Be Convention City.

Announcement has been made of the twelfth annual convention of the Washington State Grain Growers, Millers and Shippers' association. It will be held at Pullman January 3 to 5, practically the same dates as last year. The program has not been announced, but it is the plan of President R. J. Stephens of Spokane to secure representation from the federal department of agriculture to discuss the grading system with the farmers and others interested in the subject.

Four Hundred Beef Cattle Shown

This Division at Portland Was a Display of Superlative Excellence

By E. L. POTTER

The beef cattle division of the Pacific International was not only the largest and most attractive portion of the show but was in all respects a show of superlative excellence. A list of approximately four hundred entries besides the car lots made the biggest beef show ever held west of the Rocky mountains. In quality as well as numbers it was also the best of the west and the prize winners were all worthy of exhibition in the best shows of the world. Furthermore the show was most representative of the western country. All of the best herds west of the Rocky mountains were represented and for once not a single visitor dared to claim to "have better ones at home." Some few exhibitors of other classes of stock have been inclined to think that the management favored the beef section, but we do not agree with this for a moment although we would consider it only human if they did since the beef men have not only brought their herds from far and near, but have boosted the show in season and out and have spent days and weeks of hard work for the success of the show as a whole.

The Shorthorns.

In numbers the Shorthorns easily led the procession as more than half of the entire beef show were red, white or roan. In quality we could make no comparisons since the best of all three breeds were just as good as they grow, and furthermore there were mighty few tail-enders anywhere. From the standpoint of interest, however, the Shorthorns held the center of the stage since practically every district of the west was represented by animals whose admirers were expecting to win but which had previously come in competition with few or none of the other entries. The Washington and Montana herds had met at Lewiston the week before but these had not come together with the Oregon delegation nor with the crack herds which had just come up from California for the first time. It was at no time a one-man show. T. T. Miller of Los Angeles, The Pacheco Cattle company of Hollister, Cal.; Frank Brown of Carlton, Ore.; A. D. Dunn of Wapato, Wash.; Day & Rothrock of Sprague, Wash.; J. H. McCroskey & Sons of Sprague, Wash., and Childs & Anceny of Helena, Mont., all came in strong for firsts and seconds, while the fancy colored ribbons were scattered all over the map. William Hartnett of the Shorthorn Exporting company, Chicago, did the judging to the satisfaction of all. We failed to hear a single suggestion that the awards migh have been placed differently. The facts are that the competition was so keen that when the exhibitors saw the line-up they were most thankful to be even among the "also rans."

The bull classes were good all through, but as a rule the older bulls did not show the same finish as the younger ones. The two-year-olds brought out the grand champion in Diamond Perfection, a bull so thick and massive that he was a popular candidate for that honor. The quality of this class is indicated by the fact the only two-year-old prize winner sold in the Thursday auction was sixth place and brought $1200. The senior yearlings were another good lot, but the junior yearlings were the real show with 20 entries. The head of the class, Escana Clipper, was later made junior champion. He is a Canadian bred bull recently brought out by A. D. Dunn.

The aged females were headed by the sensational imported cow, Imp. Brandsty's Jinny 18th that T. T. Miller bought at the Carpenter & Ross sale last spring for $3100. This cow is a beautiful, smooth, massive cow with lots of quality and above all with that femininity and refinement so necessary in a good breeding cow. She showed with a splendid calf by her side. The two-year-olds brought out the thick roan cow, Escana Blossom, that later sold for $1625. But the sensation of the show was found in the senior yearling, Topsy 4th. Topsy was finally put through to junior and then grand champion, defeating the senior champion, Brandsty's Jinny 18th. Topsy is ideal from the beef man's standpoint. She carries wonderful width and depth and a great covering, all with the great size and bone so admired by the western beef producers. She is strictly a western product, her sire being bred by Alex Chalmers of Forest Grove, and her dam by W. O. Minor of Heppner. She also has the honor of being the first northwestern bred animal to be exported to Argentine. Both Topsy and Escana Blossom will be taken by Mr. Hartnett to Chicago and then exported to South America. Topsy brought the top price of the sale, $1775. The Shorthorn people also took a good deal of pride in the fact that the grand champion steer of the show was a Shorthorn shown by the University of California and a half brother of the Chicago champion of 1916. The California people report that the dam of these two wonders now has by her side a third calf that promises to outrank them all. It is a common saying that one good animal will "make" a breeder.

The Angus.

The Angus exhibit consisted of a full herd, including two entries for each class from the farm of Congdon & Battles of Yakima, Wash., and two head from the Washington State college. In spite of the limited competition the animals were of the very best type and were shown in first class condition. This is the second year that Congdon & Battles have exhibited in the northwest and their cattle have created a big interest in the Angus breed. Several small breeding herds are being established and many beef producers are giving the Angus a trial on the range. The Angus exhibited in Portland this year compared very favorably with the best of the Herefords and Shorthorns. The grand champion bull, Eileenmere, was sold some time ago to J. A. Scollard of Chehalis, Wash., for $2500, with the understanding that he was to be delivered after showing at the expositions.

The Herefords.

The Hereford show was the largest ever held west of the Rocky mountains and the quality was never better. Tops were largely the same animals that were shown at Lewiston. Most of these cattle have met many times before, which tends to rob the judging of some of its interest, but it did not detract in the least from the quality of the exhibits. Montana and Oregon put up most of the display, as the California people did not appear. A. B. Cook won the heavier share of the money, but lost the grand championship in the males to Henry Theissen's Prince Rupert 80th, a great yearling that has not been defeated since he was brought west something over a year ago. Cook's junior yearling, Panama 37th, was the smoothest, meatiest, straightest lined bull in the show, but he did not have the scale and bone of the Theissen bull.

The female classes were good from top to bottom. The grand champion, Lady Perfection 3d, is a cow of perfectly straight lines and of enormous width, depth, and thickness of flesh. She is not however, as smooth as the aged cow, Princess R. Princess R. has been shown about six years and is still about the smoothest thing on the grounds. Chandler's senior heifer calf, Jennie Generous, is a sweet heifer and an all around good one. She is by the old bull, Generous, which made such a record in the Tow herd in Iowa before being bought by the Chandlers.

The Car Lots.

The car lot exhibit was light this year. High-priced feed and low-priced cattle together do not promote extensive exhibits. Ed Coles of Haines, Ore., had the grand champion load, as he has had for several years past, and they were good cattle. They sold for $16.75, which is about what they could bring on the open market in Chicago. The other loads brought from $10.25 to $15, which was at best no more than Chicago market prices. They were good commercial cattle but not show cattle. The feeder cattle went for from $9 to $9.75. The production of fancy cattle in the northwest is not a paying proposition unless a fancy price and a liberal prize is received, but until the show is in a better financial position than it is, liberal prizes in the car lots will hardly be possible, and in the mean time we will probably have to content ourselves with show cattle carrying considerably less than show finish.

BEEF CATTLE AWARDS.

The following are the awards in the beef cattle division:

Shorthorns.

Bull, 3 years old or over—First, Thomas T. Miller, Los Angeles, Cal., on Diamond Choice; second, H. L. Summers, Bozeman, Mont., on Master Avondale; third, George Bertrand, Castle Rock, Wash., on Chief Goods; fourth, Felzer Bros., Tangent, Ore., on Barrington Gold; fifth, J. R. Wyatt & Son, Bozeman, Mont., on Excelsior; sixth, A. Chalmers, Forest Grove, Ore., on King George; seventh, E. H. Holloway, Albany, Ore., on Golden Favorite. Two years old—First, Frank Brown, Carlton, Ore., on Diamond Perfection; second, Child & Anceny, Helena, Mont., on Green Meadow Master; third, Pacheco Cattle Co., Hollister, Cal., on Pacheco Lad 58th; fourth, J. H. McCroskey & Son, Sprague, Wash., on Cottonwood Sultan; fifth, J. B. Cornett & Son, Shedd, Ore., on Golden Minority; sixth, A. D. Dunn, Wapato, Wash., on True Baron; seventh, W. J. Townley, Union, Ore., on Good Prospect; eighth, A. Chalmers, on Prince Violet Pacific. Senior yearling—First, Thomas T. Miller, on Greendale Sultan; second, Child & Anceny, on Maxwelton Master; third, Washington State college, Pullman, Wash., on Village Excelsior; fourth, Schmidt Bros., Hoff, Ore., on Village Victor; fifth, A. Chalmers, on Prince Imperial. Junior yearling—First, A. D. Dunn, on Escana Clipper; second and sixth, J. H. McCroskey & Son, on Rare Count and Golden Dale; third, E. F. Anderson & Son, Albany, Ore., on Ring Glory; fourth, T. B. Gibson Estate, Woodland, Cal., on Ringleader's King; fifth, Day & Rothrock, Sprague, Wash., on Rusper Sultan 2d; seventh, Child & Anceny, on King Mysie; eighth, George Bertrand, on Chief's Golden Mine; ninth, W. O. Minor, Heppner, Ore., on Victor's Chief; tenth, Felzer Bros., Tangent, Ore., on Barrington Famous. Senior calf—Pacheco Cattle Co., on Pacheco Lad 100th; second and sixth, Frank Brown, on Brigadier General and Diamond's Choice; third and eighth, A. D. Dunn, on Supreme Chief and March Onward; fourth and seventh, Day & Rothrock, on Superb Clarion and Fair Cumberland; fifth, J. B. Cornett & Son, on Silver King; ninth, J. H. McCroskey & Son, on Ury Marshall; tenth, Perry Smith, Yamhill, Ore., on Roan Champion. Junior calf—First, J. H. McCroskey & Son, on Canadian; second, Child & Anceny, on Royal King; third, University of Idaho, Moscow, Idaho, on University Prince; fourth, Pacheco Cattle Co., on Pacheco Lad 109th; fifth and sixth, Day & Rothrock, on Hercules Stamp and Hercules Good; seventh, Frank Brown, on Roan Diamond; eighth, Gibson Estate, on Ringleader's King 2d; ninth, H. L. Summers, on Goldendale 2d; tenth, W. J. Townley, on Royal David.

Cow, 3 years or over—First, Thomas T. Miller, on Improved Bradsty's Jinny 18th; second and fifth, H. L. Summers, on Mayflower 2d and Helen Cumberland; third, A. D. Dunn, on Scottish Jane 2d; fourth, Felzer Bros., on Maples Violet; sixth, A. Chalmers, on Fork Branch Mildred; seventh and eighth, George Bertrand, on Roselawn Daisy 2d and Roan Welcome 80th. Two years old—First, A. D. Dunn, on Escana Blossom; second, J. H. McCroskey & Son, on Canadian Lassie; third, Thomas T. Miller, on Golden Queen; fourth, Frank Brown, on Mildred Saunders; fifth, Pachaco Cattle company, on Pacheco Lass 80th; sixth, Child & Anceny, on Farmers' Beauty; seventh, G. W. DeLay, Hot Lake, Ore., on Scottish Jane 3d; eighth, J. R. Wyatt & Son, on Red Queen; ninth, A. Chalmers, on Violet's Bough; tenth, H. L. Summers, on Roan Princess. Senior yearling heifer—First, Day & Rothrock, on Topsy 4th; second, Child & Anceny, on Daisie Green; third and sixth, A. D. Dunn, on Sweet As Ever and Sweeter Yet; fourth, Thomas T. Miller, on Sultana of Linwood 2d; fifth, J. H. McCroskey & Son, on Fancy Mine 2d; seventh, Pacheco Cattle company, on Pacheco Lass 81st; eighth, H. L. Summers, on Cicely of Avon; ninth, W. O. Minor, on Meadow Lawn 2d. Junior yearling heifer—First and fifth, Frank Brown, on Roan Princess and Grandifame; second, W. J. Townley, on Ringleader's Ruby; third, Day & Rothrock, on Village Rose 4th; sixth, Child & Anceny, on Zona 3d; seventh and tenth, Gibson Estate, on Roselawn Bloom and June Elberg; eighth, A. D. Dunn, on Bonnie Queen; ninth, J. B. Cornett & Son, on Marigold. Senior heifer calf—First, Thomas T. Miller, on White Mayflower; second and seventh, Pacheco Cattle company, on Pacheco Lass and Pacheco Lass 111th; third and sixth, Day & Rothrock, on Lady Missie 10th and Perfection's Pearl; fourth and eighth, Frank Brown, on Melba Perfection and Bonnie Gem; fifth, J. H. McCroskey & Sons, on Dale's Lady; ninth, A. Chalmers, on Seaforth Queen; tenth, H. L. Summers, on Mayflower 3d. Junior heifer calf—First and third, Day & Rothrock, on Hercules Topsy and Golden Light; second, A. D. Dunn, on Dewdrop; fourth, Pacheco Cattle company, on Pacheco Lass 118th; fifth and seventh, J. H. McCroskey & Sons, on Escana Laura and Mary Lady; sixth, E. F. Anderson, on Golden Sophonie; eighth, Frank Brown, on Grandiflora; ninth, Gibson Estate, on Roselawn Blossom; tenth, G. W. DeLay, on Scottish Jane 4th.

Senior champion bull—Frank Brown, on Diamond Perfection. Junior champion bull—A. D. Dunn, on Escana Clipper. Grand champion bull—Diamond Perfection. Senior champion cow—Thomas T. Miller, on Improved Bradsty's Jinny 18th. Junior champion cow—Day & Rothrock, on Topsy 4th. Grand champion cow—Topsy 4th.

Aged herd—First, Frank Brown; second, Thomas T. Miller; third, A. D. Dunn; fourth, J. H. McCroskey & Sons; fifth, Pacheco Cattle company; sixth, Child & Anceny; seventh, H. L. Summers; eighth, A. Chalmers. Young herd—First, Day & Rothrock; second, A. D. Dunn; third, J. H. McCroskey & Sons; fourth, Frank Brown; fifth, Child & Anceny; sixth, H. L. Summers; seventh, A. Chalmers. Calf herd—First, Pacheco Cattle company; second, Day & Rothrock; third, A. D. Dunn; fourth, Frank Brown; fifth, J. H. McCroskey & Sons; sixth, Child & Anceny; seventh, Gibson Estate; eighth, H. L. Summers. Produce of cow—First, Day & Rothrock; second, Child & Anceny; third and fourth, Pacheco Cattle company; fifth, Gibson Estate; sixth, Washington State college; seventh, Frank Brown; eighth, A. Chalmers. Get of sire—First, Pacheco Cattle company; second, Child & Anceny; third, Day & Rothrock; fourth, Frank Brown; fifth, J. B. Cornett & Son; sixth, H. L. Summers; seventh, A. Chalmers.

Community Cooperation

What Are Advantages of Trading at Home?

How many farm folks and small town residents fully appreciate what a spirit of community cooperation may be made to mean to them? Not alone can this be weighed in the scales of sentiment and civic pride. There is also something of a dollars and cents value in boosting one's home town if we study the matter from the mercenary side.

In a community that is "financially sick" it is a very uncommon thing to find the individual prosperous. This is because the individuals who make up a community shape the trend of a community up or down.

All of you have heard people living in or near a smaller town say: Our little town can't grow it is too near the city. So, with this belief planted in the mind one goes on spending a lot of the money that is produced locally in the stores of nearby larger towns and cities.

You go on failing to patronize your home town merchants. They can't make a "go of it" and as a trading center the home town falls lower and lower in the scale.

Local merchants become afraid to stock up with high grade merchandise after a time and it isn't long before your home town stores carry only the lower grades of goods.

Don't pay your local dealer two prices for a good article; but do give him a chance to buy in sufficient quantities so that he can supply you at the same price as the same article can be bought for elsewhere. Encourage him with your trade so that he is not afraid to carry well-known brands of goods with a standardized quality. A standard article represents the same value no matter where you buy it.

Once the merchant of your home town knows the trade of their community is back of them, they will not hesitate to carry standard products of known quality for you to select from. You have the opportunity to help make your community improve. For, with better stores, comes a better town and a good town means inhanced values for any property you own in it or near it.

Farm Loans Popular

Farmers Ask Hundred Ninety Millions

All doubt regarding the popularity of the federal farm loan system is now swept away by the record. Up to November 1 the 12 farm loan banks had received applications for loans aggregating the stupendous total of $193,250,945.

This represents the applications only of the 3000 organized farm loan associations, of which about 1500 have actually been chartered, and the remaining 1500 yet awaiting the decision of the farm loan board on their applications for charters.

In addition to the 3000 associations now organized, the federal land banks estimate that there are approximately 2000 other farm loan associations being organized in the United States.

Up to November 1 the 12 federal land banks had paid over to farmers in 5 per cent loans a total of $21,040,138. One-third of that total was paid out in October. In the same month the 12 banks received applications for loans amounting to $27,416,463, and approved loans amounting to $20,119,240. Evidently it will be some time before the banks will catch up with the volume of business rolling in upon them.

A report issued by the federal farm loan board indicates that up to November 1 farm loan bonds to the amount of $21,500,000 had been disposed of to investors of the United States. Of this amount $18,850,000 of bonds were distributed through bond houses and $2,650,000 were sold direct by the 12 federal land banks to investors.

These bonds bear 4 1-2 per cent interest and are entirely tax free. They are sold at 101 1-8 and are secured by the first mortgages taken in exchange for loans made to the farmers by the 12 federal land banks and they are further secured by all of the assets of all of the twelve federal land banks. These bonds are being offered to the public at the rate of approximately $3,000,000 per week. The money derived from their sale is loaned to farmers at 5 per cent, the margin of one-half per cent being employed to pay the expenses of the federal land banks.

The volume of business up to November 1 divided by federal land bank districts is as follows:

Federal land bank.	Applications.	Loans closed.
Springfield	$ 4,646,188	$ 304,065
Baltimore	7,567,918	1,193,950
Columbia	19,768,800	629,280
Louisville	12,697,477	1,391,900
New Orleans	13,753,037	1,121,516
St. Louis	8,969,980	382,515
St. Paul	20,364,000	2,726,200
Omaha	14,947,360	1,093,790
Wichita	23,394,049	5,869,700
Houston	19,167,223	729,433
Berkeley	19,210,139	1,248,200
Spokane	28,764,774	3,849,590

The business of the Spokane bank was distributed as follows:

	Applications.	Loans closed.
Idaho	$ 3,718,188	$ [illegible]
Montana	9,660,919	1,1[illegible]
Oregon	6,340,778	[illegible]
Washington	9,044,889	[illegible]

That Hog Price

What Are Purposes Back of It?

The aims of the government in specifying the recently announced price of $15.50 a hundred pounds for hogs have been clearly set forth by Joseph P. Cotton, chief of the meat division of the national food administration. A recent statement by Mr. Cotton reads as follows:

"The main purposes of the food administration as to hogs are four: To see that the producer at all times can count on a fair price for his hogs so that they will be profitable to him; to see that the farmer increases the number of hogs bred; to limit the profit of the packer and the middleman and to eliminate speculation.

"All these purposes are necessary because we must have more hogs, so that the ultimate consumer shall at all times get an adequate supply of hogs at the lowest feasible price.

"We shall establish rigid control of the packer. Fair prices to the farmer for his hogs, we believe, will be brought about by the full control which the food administration has over the buying for the allies, our army and navy, the Red Cross, the Belgian relief and the neutrals, which together constitute a considerable factor in the market.

"The first step is to stop the sudden break in prices paid for hogs at the central markets. These prices must become stable, so that the farmer knows where he stands and will feel justified in increasing hogs for next winter. The prices so far as we can affect them will not go below a minimum of $15.50 per hundredweight for the average of the packers' droves on the Chicago market until further notice.

"We have had and shall have the advice of a board composed of practical hog growers and experts. That board advises that the best yardstick to measure the cost of production of the hog is the cost of corn. That board further advises that the ratio of corn price to hog price on the average over a series of years has been about 12 to one (or a little less). In the past, when the ratio has gone lower than 12 to one, the stock of hogs in the country has decreased. When it was higher than 12, the hogs have increased. That board has given its judgment that to bring the stock of hogs back to normal under present conditions the ratio should be about 13.

"Let there be no misunderstanding of this statement. It is not a guarantee backed by money. It is not a promise by the packers. It is a statement of the intention and policy of the food administration, which means to do justice to the farmer."

Lack of Rain Greatly Hampers Crops

Parts of Inland Empire Have Discouraging Outlook

By J. E. NESSLY.

Crop conditions throughout the Palouse country are the most unfavorable in its history. No rain has fallen since June 24, with the exception of 15-100 of an inch in two showers in September, and a little moisture —noted by the weather observer at "a trace" a short time ago—when we had a few days of fog, with slight precipitation. Less than half of the summer fallowed land in Whitman county has been planted to wheat, because the ground is so dry it would not sprout, and farmers feared to waste the seed by planting now. As a result a large per cent of the summer fallowed ground will be held for early spring planting, and Marquis and Early Baart wheat will be planted.

The writer has driven more than 1000 miles by automobile through the grain belt of eastern Washington, western Idaho and northeastern Oregon recently and has noted crop conditions carefully. Pioneers of the Palouse country say they have never experienced such a long drouth, more than five months passing with less than half an inch of rainfall, and much of that time being in the growing season.

J. S. Klemgard of Pullman said: "I have been here more than 30 years, and never saw anything like it. I have planted 1000 acres in fall wheat, but doubt if any of it will come up, and I may have to reseed it in the spring. My crop this year was not bad. I had nearly 25 bushels per acre, which would be a small crop ordinarily, but is good for 1917. But one thing that is causing uneasiness is the scarcity of feed. We have no green feed at all and are feeding our cattle straw now, and straw stacks are in demand at $25 each. Many farmers will have to sell off their cattle for lack of feed. There is positively no green feed of any kind in the country now."

Roy Jones, representative in the legislature from Whitman county and a prominent farmer and stockman, said: "I have never seen anything like this season. We have no green feed at all and are going to sell off our cattle because we can not feed them. I am afraid to sow wheat in the dry ground, for I do not believe it will come up. The outlook is indeed discouraging."

Roy S. Irvine, editor of the La Crosse Clipper, said: "Our average rainfall is 17 inches, and we have had less than 11 inches of rain in 1917. Little fall wheat has been planted, for there has been no moisture, and the ground is so dry it will not sprout if planted. Western Whitman county had a fair crop for this bad season, but the outlook for next year is not encouraging unless we get plenty of rain, when a large acreage of spring wheat will be planted."

In the southern part of Whitman county there was some rain in September, and a fairly good acreage of winter wheat was planted and much of this is up and growing. This is true of the country between Colton and Uniontown and Lewiston, where enough rain fell to sprout the grain and give it a good start.

South of Snake river, in Asotin county, conditions are much better. A heavy rain fell there in September and an average acreage of fall wheat was planted and much spring plowing has been done on Anatone flat, where the crop was fairly good last season.

Across the Grande Ronde river, in Wallowa county, Ore., four inches of rain fell in September and an unusually large acreage of fall wheat was planted early, and it is up several inches high now, and some fields are being pastured. Grass is green and stock of all kinds on the range is fat. Fall wheat conditions have never been as good there as now, and many of the farmers have their spring plowing done ready to sow to wheat early next spring.

The same conditions apply west of the Joseph Mountains, in Union county, Ore., where a heavy rain in September gave the farmers an opportunity to plant a big acreage of fall grain and bright, warm weather since has given the grain a splendid growth.

Dairymen

State Association at Sequim

The Washington State Dairymen's association will meet at Sequim, Clallam county, December 13 and 14. Sending out the program Fred J. Mess, the president of the association, declares that "at this meeting subjects of vital importance will be under discussion—subjects that should interest every farmer as well as the dairymen and creamerymen—in fact every citizen interested in the vital question of milk production should attend this meeting."

Thursday, December 13, the address of welcome will be given by the mayor of Sequim and the response by William Bishop of Chimacum. This will be followed by the annual address of President Mess.

There will also be a joint meeting of creamerymen, dairymen and inspectors on Thursday with the following program: "The Condensery," P. G. Kinzer, Seattle; "The Creamery," S. Menzel, Everett; "The Dairyman," Dr. Mac L. Richards, Bothell; "The Inspector," A. D. Fish, state dairy and creamery inspector, Seattle; "Feeds and Feeding Conditions," W. O. Maughn, state college, Pullman.

Friday's program is as follows: Report on organization work, W. H. Tierney, state organizer, Silvana; "The Labor and Feed Problem," E. F. Benson, commissioner of agriculture, Olympia; 'Conservation as Applied to Dairying," William T. McDonald, live stock commissioner, Victoria, B. C.; "Organization and the Labor Question," A. J. M. Mossum, Seattle; "Seattle Milk Supply," Dr. F. E. Smith, chief veterinarian, Seattle; "Conditions in the East in Dairy Lines," A. N. Henderson, Seattle; "East of the Mountains," E. E. Flood, Spokane; "The Department of Agriculture," Dr. R. J. Donohue, dairy and live stock division, Olympia; "Report of Secretary, Minutes of 1916 Meeting," A. B. Miller, secretary.

Ceramery Operators.

A meeting of the Washington Creamery Operators and Buttermakers' association will be held at Seattle December 11 and 12 at the Frye hotel. The program for Tuesday includes the following: Address of welcome by Secretary of chamber of commerce, Seattle; response by H. J. Keithahn, Everett; annual address by President H. Menzel; "Needed Legislation," Dr. R. J. Donohue; "Conservation From the Buttermaker's Standpoint," S. S. Morse, Montesano; "Lack of Uniformity of Butter, From the Broker's Standpoint," W. E. Turner, Seattle; "Lack of Uniformity of Butter From the Producer's Standpoint," F. R. Klumb; "Utilization of the Byproducts in Creameries," Professor C. D. Turnbow, state college, Pullman; The scoring of butter and a banquet will follow.

For Wednesday the following program has been prepared: "Review of Past Year's Work in the Creameries," A. D. Fish, state dairy and creamery inspector, Seattle; "Benefits of Pasteurization," S. J. Simonson, Seattle; "How to Meet Competition of Condensaries and the Manufacturers of Oleomargarine," N. P. Sorenson, Bellingham; "The Department of Agriculture," E. F. Benson; "The Dairyman and His Problems," Fred Mess, Orillia; "British Columbia Creamery Operators and Buttermakers," William T. McDonald; "How We Arrive at Market Quotations," representative Daily Produce News, Seattle.

Dairy Buyers Timid

Scarcity of Feed and Labor Felt

The general conditions of high-priced feed and scarce labor were reflected in the Holstein sale November 23, at the Pacific International Stock show. The high range of prices of some previous sales was not reached and there were no exceptionally high-priced animals sold, but the sale left a satisfied lot of buyers, who will come back for more. The bidders generally wanted good average working cows and a few show and high-record animals did not bring all their worth. But, when conditions are considered, the sale must be called a success. Strange to say, the nine bulls averaged higher than the 50 cows. They sold for $2310, an average of $257.33, while the cows brought $9740, or an average of $194.50, making a total of 59 animals for $12,050, or an average of $204.23.

Colonel George Gue officiated on the block in his usual able manner, strongly assisted by Colonels J. W. Hughes and Harry Cranke. The following is a complete list of animals sold, buyers and prices paid:

Consigned by Hollywood farm, Hollywood, Wash.:

Females:

Hollywood Genevieve Fayne 2d, calved July 25, 1915; sold to Pomeroy & Son, Scappoose, Ore.	$260
Bos Ives Maples, calved August 1, 1913; G. D. Shafer, Vancouver, Wash.	300
Hollywood Spring Brook Bessie, calved December 13, 1914; G. D. Shafer	280
Hollywood Mutual Model, calved December 30, 1915; W. E. Hornbrook, Goldendale, Wash.	250
Hollywood Bessie Pontiac, calved October 1, 1915; Harry W. Bateman, Bellingham, Wash.	170
Hollywood Spring Brook Lorinda, calved November 25, 1915; Fred Davey, Vancouver, Wash.	250
Hollywood Bessie Posch, calved May 28, 1916; C. V. Martin, Forest Grove, Ore.	130
Hollywood Pietertje Johanna, calved April 12, 1916; Oscar P. Dunlap, Junction City, Ore.	145
Hollywood Cassiopa Bessie, calved May 11, 1915; Blaine Turner, Portland, Ore.	200
Hollywood Bessie Lorinda Fayne, calved May 4, 1916; A. P. Johansen, Parkdale, Ore.	150
Grace Juliana Queen, calved February 15, 1915; C. A. Svenson, Tillamook, Ore.	230

Bulls consigned by Hollywood farm:

Hollywood Lilith Korndyke, calved March 1, 1916; Pomeroy & Son	405
Hollywood Adverturess Palmyra, calved August 31, 1915; Earl G. Barnes, Silver Lake, Wash.	300

Females consigned by P. A. Frakes, Scappoose, Ore:

Lake Farm Friesland, calved April 27, 1916; C. E. Fisher, Kent, Wash.	105
Inka Netherlands Segis Wayne, calved July 21, 1913; Lloyd G. Whipple, Vancouver, Wash.	130
Oregon Belle Hergerveld, calved July, 25, 1914; C. E. Fisher	185
Calamity Pontiac Jane, calved May 26, 1916; G. Eugene Whipple, Vancouver, Wash.	105
Oregon Darkness, calved January 5, 1913; John Farr, Warren, Ore.	225
Daisy Perfection, calved November 7, 1916; William Bishop, Chimacum, Wash.	240

Bull consigned by P. A. Frakes:

Sir Madolyn Korndyke, calved September 7, 1915; E. S. Tillinghurst, superintendent state school for the deaf, Salem, Ore.	205

Females consigned by David McKeown, Gresham, Ore.:

Laura Netherland Johanna, calved November 8, 1911; H. W. Lynch, Gresham, Ore.	535
Jewel Veeman De Kol 2d, calved January 23, 1916; A. W. Burns, Gresham, Ore.	215
Countess Cantrilla Yukon, calved October 20, 1915; A. Grant, Gresham, Ore.	255
Phoebe Veeman Pontiac Beryl, calved January 20, 1916; S. M. Ross, Richland, Wash.	205
Cantrilla Veeman Lilith De Kol, calved April 3, 1916; A. A. Yager, Tillamook, Ore.	140
Pyrrha Wayne Fleeta De Kol, calved November 14, 1916; A. Grant	145

Bull consigned by David McKeown:

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian or foreign, one year, 75c.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Commerce of the Pacific

No matter how absorbed people may be in war matters, leaders in business and finance are looking forward toward meeting conditions after the war. Even in Germany business is reported to be getting ready for the new era. American exporters want a board acting under government authority to plan for trade development abroad as soon as peace is restored. England has a minister without portfolio looking after the matters of trade development. A consular report from The Hague speaks of a heavy demand for captial to build up new industries in the Dutch East Indies.

What are we doing in the Pacific Northwest along these lines? What plans are being made for the far reaching development of our agricultural, fishing, timber and mining resources? The Pacific Northwest is in a strategic position to take advantage of commerce of the Pacific which bids fair, in time, to outrival the commerce of the Atlantic. There must be unity of action on the part of the four states if we are to reap the largest measure of success. Who is thinking about these things? Why should we not look to the thoughtful farmer as well as to the thoughtful lumberman or the thoughtful miner in laying the foundation for this new commercial development of the Pacific Northwest?

Food Control of Retail Traders

When the food control law was passed by congress the Farmer drew attention to the fact that practically no restrictions were put upon the retail trade, and there was danger that all the government might save by putting down the price of wheat and placing the mills and wholesale houses under license control might be appropriated away from the consumer by the retailers shoving up their profits.

Mr. Hoover is doing what he can to check that danger by exerting pressure on the retailers through the licensed wholesalers, but a belief is growing at Washington that this curb will not suffice, and that additional legislation will be needed.

Complaints, official and unofficial, are being made to the Washington authorities of specific instances of price-kiting that are taken as more than sufficient indication that hundreds of retailers are not doing their part toward lowering the food costs.

At present the retailer is in a position to reap all the profits that have just been taken away from the brokers and middlemen by regulation. He is not bound by any agreements. Numerous instances are continually being reported to the authorities of seemingly unwarrantable increase of prices.

Efforts will be made to put through congress a bill that will permit a sliding scale of profits reckoned by the transportation and distribution problems affecting the various localities. The scale of profits will be proportionate to those considered reasonable for any class of big or little business.

The Science of Giving

Every once in a while we hear somebody complaining because he is asked to give to the many needs which have appeared on account of the war. "First it was the Liberty loan," growled one, "and then it was the Red Cross, and then it was another Liberty loan, and now it is the Y. M. C. A. What do they think a man's made of? Hasn't he anything to do but dig down into his pocket and give all the time?"

We are not sure whether such men are really ignorant of the true need of these various calls on him, or whether they are merely exercising their inalienable and God-given privilege of "roaring."

The Liberty loans are not gifts, but investments at a good rate of interest in as safe a security as exists in the United States. Why call such a thing a gift?

If the wounded soldiers from the battle fronts could be laid before us on our streets, and if we could see their ghastly wounds and hear their moans and cries of agony, we would not hesitate to reach clear down to the bottom of our pockets and give generously, liberally.

If we could see the unwholesome and harmful surroundings of our soldier boys, and realize that the Y. M. C. A. is seeking to give what they really need in the way of religious gathering places, good amusements, places to read and write, we would not hesitate to give bountifully.

"Out of sight, out of mind," appears to apply to most of us.

We have made a science of business and have studied out methods of gathering money. Have we thought of scientific, efficient ways of giving? Isn't giving just as important to us as human beings as taking? Why should we not devote careful, earnest thought to ways of giving?

Topping the Market

One of the most successful general farmers we have met says that he has never received the top price in all his life on market crops. He has "sprung the market" on live stock occasionally.

The point he makes is that he prefers a fair and legitimate profit on his stuff to the risk run in trying to get the very highest possible price. Speaking of the wheat market of last year, he says:

"No, I didn't get as much as some of the boys, but I got $1.45, and that is a big price and a profitable one. Suppose I had got a little more; why should I want more than a stiff price? The people who wait till the last minute for the highest price lose as many times as they win. I am satisfied with a fair price and I win more in the long run than the top of the market fellows."

The Silo for Preserving Feed

We look for the coming spring to be one of silo building on farms. The silo is a method of preserving green feed. No man with dairy cows can afford to be without one. Times past, the dairy farmer may have succeeded in making money without a silo. We imagine those good old days have gone by, and the time has come for conservation—a conservation of wastes which may mean all the difference between profit and loss.

After all, it is a good thing. Lavish plenty is a glorious thing, but the man who by his own skill and foresight wrests success out of stubborn soils and difficult conditions has more right to take pride in his achievement.

We ask every farmer who milks cows to consider seriously the silo question. There are many on the market: there are home made silos, too. "Any silo is better than none at all."

Washington Gleanings

Plans are being made in Rosalia now for the organization of a boys' pig club.

The South Bend vegetable cannery has finished its pack for this year. The value of the pack is estimated to be close to $25,000.

There are approximately 600 cows on test in the Yakima Valley Cow Testing association and many more are on the waiting list.

It is practically assured that there will be 550 cars of normal size (630 boxes to the car) apples shipped from the Omak station this fall.

A farmers' institute run by farmers is the feature planned for the meeting scheduled to be held in North Yakima, January 21 to 25, inclusive.

North Yakima's display at the Tenth National Apple show held at Spokane, was adjudged winner of the first prize for general district displays.

W. H. Eaton has purchased the Palouse Country Improvement company farm of 800 acres seven miles west of Pullman on Union flat, paying $62,000.

Cull apples, which in former years have had a limited market, are in keen demand this season at the evaporation and canning plants near Spokane.

Owing to the growing importance of pathological work in agriculture, the division of plant pathology of the department of botany has been made an independent department and an integral part of the state college of Washington.

P. S. Darlington, district horticulturist, estimates the apple crop in the north central Washington district at 5,264,800 boxes. Last year it was 4,804,800 boxes. At $1.15 a box as an average, the gross receipts will be $6,054,520.

A movement has been started to effect the organization of a County Council of Agriculture in Okanogan county, which will help to unify the efforts of the existing agricultural organizations and to strengthen the work which they are doing.

Efforts to secure about 600 acres for planting to sugar beets as an experiment is being made by the Walla Walla commercial club. If the beets prove satisfactory the club will try to secure contracts for 6000 acres in order to get a beet sugar factory.

William Peck, who farms the Mood estate of 640 acres, west of Palouse, has shipped 79 hogs recently, receiving from the lot, $2930. Mr. Peck states that he has more hogs to market and that his profits from the hogs will pay his cash rent of $3000 for the year.

Herschel May, a Toppenish boy, who joined the McKinley Pig club organized by the extension department of the state college at Pullman in the fall of 1916, began business with a sow on January 13, 1917, and since then has accumulated net profits of $288.95.

John E. Tate, whose farming operations in the Palouse country, in connection with those of his sons, have been extensive for the last several years, has purchased from Dolph Coolidge of Colfax, 398 acres on Fourmile, southwest of Palouse. The consideration was $80 an acre, or $31,840.

A move of much importance to the live stock industry of the northwest has just taken place in Spokane with the reorganization of the Spokane Cattle Loan company which now is backed by the Old National bank, the Spokane & Eastern Trust company, the Exchange National bank, and the Armour interests.

What Others Say

Hoard's Dairyman: Milk prices this winter may make the cow which produces 3500 pounds of milk containing 150 pounds of fat return a profit, and we believe under present conditions such a cow should pay, but under normal times farmers can not hope to make a profit from such cows.

National Stockman and Farmer: Whether the country's needs will call for the conscription of labor for agriculture and other vital industries remains to be seen, but the idea of turning labor from the production of luxuries to the production of necessities should be considered now instead of next spring, when it will be too late.

Farmers' Review: Increased food production is imperative. The time is past when we can afford to stop and count profits. Every ounce of our energy must be turned toward providing the sinews of war. Farmers must begin now to make their plans for next season's crops. They may be tired of being urged to produce more, but if France or England fail because of lack of food—let us not think of it.

New High Average

Shorthorns Bring Good Prices

The Shorthorn sale, November 21, at the Pacific International stock show, set a new record for average prices of all animals sold and for both bulls and females. Besides this for the first time in the history of the northwest Shorthorns were purchased at auction to be exported to South America. William Hartnett, of the Shorthorn Exporting company of Chicago, who judged the Shorthorns and who has spent much time in the Argentine republic, purchased the senior champion cow, Escana Blossom, shown by A. D. Dunn, for $1625 and the junior and grand champion heifer, Topsy 4th, shown by Day & Rothrock, for $1775. Both these prices are higher than ever before paid at this sale and mark an epoch in Pacific coast Shorthorn breeding. Especially is it notable that the Rothrock champion heifer is out of a cow bred by W. O. Minor and by a bull of Alex Chalmers' breeding, making her strictly a northwest product.

Seven animals brought $1000 or more. Prinne Prince, consigned by H. G. Keyt, was purchased by R. E. Boyce of Baker, Ore., for $1200, exactly the price Mr. Keyt paid a year ago, and he is cheap at that figure. Roan Princess, a sweet heifer of the Frank Brown consignment, was taken by the Washington State college at $1225. Sweeter Yet, a splendid yearling of the A. D. Dunn consignment, went to W. F. Howard of Parma, Idaho, for $1060 and Sweet as Ever, of the same herd, to G. L. Tarbell, Yankton, Ore., for $1050, while D. E. Higgins of Boise, Idaho, paid $1200 for the two-year-old bull, True Baron. A number of foundation herds were purchased and the bidding was spirited throughout the sale.

Colonel Kroschel of Carrol, Iowa, officiated on the block in his usual able manner. The following is a complete list of consignors, animals sold, prices and buyers:

Females consigned by A. D. Dunn, Wapato, Wash.:
Villager's Maid, calved Oct. 20, 1915—Sold to W. J. Townley, Union, Ore. ..... $ 700
Escana Blossom, calved Feb. 19, 1915—Shorthorn Exporting Co., Chicago 1625
Sweet As Ever, calved Sept. 20, 1915—G. L. Tarbell, Yankton, Ore. 1050
Sweeter Yet, calved Oct. 1, 1915—W. F. Howard, Parma, Idaho. 1060
Bulls consigned by A. D. Dunn:
March Onward, calved Sept. 10, 1916 — Portland Union Stock Yards Co. ..... $ 325
True Baron, calved Nov. 27, 1914—D. E. Kiggins, Boise, Idaho.... 1200
Supreme Chief, calved Sept. 6, 1916—Wm. Byram, Canyon City, Ore. 410
Females consigned by Day & Rothrock, Sprague, Wash.:
Village Rose 4th, calved June 13, 1916—W. J. Townley..... $ 440
Perfection's Pearl, calved Oct. 26, 1916—Washington State College, Pullman, Wash. 355
Topsy 4th, calved Oct. 2, 1915—Shorthorn Exporting Co. 1775
Bonnie Mary 2d, calved April 19, 1916—Curtis C. Cole, Scio, Ore. 260
Bulls consigned by Day & Rothrock:
Rusper Sultan 2d, calved Aug. 9, 1916—J. B. Cornett & Son, Shedd, Ore. ..... $ 475
Superb Clarion, calved Sept. 2, 1916—C. C. Olson, Haines, Ore. 550
Fair Cumberland, calved Oct. 15, 1916—E. S. Terwilliger, Merrill, Ore. 400
Females consigned by Frank Brown, Carlton, Ore.:
Grandifame, calved March 4, 1916—W. A. Hall, Caldwell, Idaho. $ 415
Melba Perfection, calved Nov. 10, 1916—F. Z. Sams, Milton, Ore.. 415
Roan Princess, calved Feb. 22, 1916—Washington State College 1225
Roan Gem, calved June 23, 1913—Geo. Garner, Centerville, Ore... 330
Valley Pride, calved Nov. 28, 1915—W. F. Howard..... 330
Bulls consigned by Frank Brown:
Diamond's Choice, calved Oct. 5, 1916—S. G. Tucker, Parma, Idaho ..... $ 540
Diamond Gloster, calved March 20, 1916—Thos. Smith, Yakima, Wash 250
Females consigned by Jas. H. McCroskey & Sons, Sprague, Wash.:
Louana 2d, calved Aug. 29, 1916—Portland Union Stock Yards Co. ..... $ 400
Dale's Lady, calved Sept. 11, 1916—Mrs. E. F. Anderson, Albany, Ore. 345
Patience, calved Dec. 18, 1916—M. J. Devin, Heppner, Ore..... 230
Merry Lady, calved Jan. 30, 1917—D. A. McDonald, Wapato, Wash. 225
Bulls consigned by Jas. H. McCroskey & Sons:
Ury Marshall, calved Oct. 29, 1916—C. O. Pool, Trout Lake, Wash. $ 375
Golden Dale, calved Aug. 18, 1916—Tom Smith, Yakima, Wash. 470
Females consigned by A. Chalmers, Forest Grove, Ore.:
Golden Queen, calved Oct. 3, 1916—C. Gagnon, Walla Walla, Wash. 245
Violet Rose, calved Jan. 2, 1916—C. Gagnon 260
Silver Bough 2d, calved Feb. 27, 1913—W. F. Howard 420
Violet's Blossom, calved Aug. 21, 1916—C. Gagnon 290
Violet's Bough, calved April 16, 1915—C. A. Buckley, Grass Valley, Ore. 315
White Rose, calved July 12, 1913—Geo. Garner 250
Bull consigned by A. Chalmers:
Scottish Prince, calved April 2, 1916—J. G. Perry, Trout Lake, Wash. 200
Females consigned by W. O. Minor, Heppner, Ore.:
Maple 2d, calved June 4, 1916—W. A. Hall 205
Maple's Violet 2d, calved March 31, 1916—A. H. Tarbell, Warren, Ore. 275
Miss Meadowlawn, calved Oct. 11, 1915—Geo. Garner 330
Golden Maple, calved Jan. 27, 1913—Elton Webb, New Plymouth, Idaho 400
Bulls consigned by W. O. Minor.
Victor's Pride, calved May 28, 1916—Portland Union Stock Yards Co. 230
Victor's Chief, calved May 4, 1916—Nelson Bros., Olympia, Wn. 350
Sir Victor, calved May 22, 1916—J. W. Davis, Ridgefield, Wash. 200
Females consigned by H. M. Elberg, Woodland, Cal:
Ringleader's Lily, calved September 2, 1916—C. A. Buckley.....$ 310
June Elber, calved June 4, 1916—M. J. Devin..... 330
Roselawn Bloom, calved February 7, 1916—W. A. Hall..... 410
New Year's Morn, calved January 1, 1917—W. J. Townley..... 225
Bulls consigned by H. M. Elberg:
Ringleader's King, calved February 12, 1916—D. J. Shollery, Prineville, Ore. 475
Ringleader's King 2d, calved Jan-

LILLY'S SEEDS For Fall Planting

BEST FOR THE WEST

To lose a crop or part of a crop these days of food shortage is a calamity. Do not take chances with inferior cheap seed or seeds not acclimated.

We test our seeds not in a general way but specifically for climate, soil, germination and pedigree. LILLY'S tested seeds, northern grown, are good seed—by which we mean clean, pure, strong seeds, capable of producing the maximum crop of superior quality.

Feeding of Silage

There is a tendency among the farmers to postpone the feeding of silage and concentrates in the fall until the cows have dropped off materially in production, says Will W. Henry, official tester of the Stillaquamish Cow Testing association in his October report. This is a big mistake as it is hard to get them back to the normal flow of milk, and as a result many cows in the valley are not producing what they are capable of, provided they get the extra feed at the proper time.

How are you to tell when to begin feeding? The most successful dairymen in the association have solved the problem by weighing the milk from each cow daily. If there is a general drop they change pasture or provide the necessary extra feed. By weighing the milk of each cow one is able to feed the cows according to their individual needs. It is not fair to feed them all alike, as one may deserve nothing but hay (and in that case she should be sold to the butcher) while another may deserve a great deal more than she is getting.

One of the members of the Stillaquamish association sold 15 head of tested cows at auction last month. Does it pay to belong to a cow testing association? There are some men who say they can tell what a cow is by looking at her. At the above mentioned auction sale it was significant that the poorest cows brought the highest prices.

Gerhard Weerda of Florence purchased a new herd sire from the Hollywood Farm. He has good records back of him. His two nearest dams tested 4.3 per cent B. F., which is good for Holsteins. His dam has a 7-day record of 485.6 pounds of milk and 24.64 pounds of butter. His grandam on the sire's side has a year record of 26,135.9 pounds of milk and 1077.21 pounds of butter.

Six cows were sold for beef last month.

Four cows made over 50 pounds of butter fat for the month. Gerhard Weerda owned the one making the highest mark at 56.9 pounds. The other three were owned by Max Eitzenberger, Zenas Farrington and W. G. Grimm respectively. W. G. Grimm had the highest herd average for the month at 35.39 per cent butter fat.

BAG BALM
MADE BY THE KOW-KURE PEOPLE

A Healthy Udder

means comfort for the cow and a generous, easy milk flow. Bag Balm, the great healing ointment, will keep the udder free from sores, chaps, cuts, bruises, cracks, bunches and inflammation. Bag Balm is especially effective at the calving period when caked bag frequently occurs. Its penetrating and softening effect is immediate. Every dairy should keep Bag Balm on hand. Sold by druggists and feed dealers, in big 50c packages. Write for free booklet, "Dairy Wrinkles."

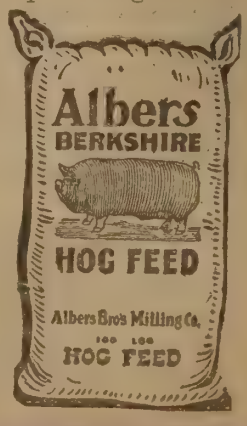
"Some Hogs"



"Wish I had the success you're having, Jim.

"Your hogs are always fat and ready to ship at the right time. What's your secret?"

"No secret to it, old man! I feed them Alber's Berkshire Hog Feed. It's the balanced ration, that makes them vigorous and healthy and permits them to 'top' the market. I have found it to be the best hog feed on the market."

Albers' Berkshire Hog Feed

is a molasses grain feed, containing a high percentage of fat and protein. For "topping-off" hogs it is rated equal to the feeding value of corn and $15 to $20 a ton cheaper. Alber's-fed hogs are toppers, and top hogs pay dividends. You have but to use Alber's Berkshire Hog Feed to be a successful hog raiser. Your dealer can supply you. If a carload buyer, write us direct.

LIVE STOCK NOTES

Write to the Editor

E. J. IDDINGS, Editorial Contributor.

Range Sheep and Lambs

Reviewing the range sheep and lamb trade for the current season Clay Robinson & Co. in their live stock report for November 1 declared: "Startling supply shrinkage and phenomenal prices have been the outstanding features of the 1917 range sheep and lamb market." It is further noted that the movement of sheep and lambs in Chicago from the northwestern range country opened this year on July 9, at least a fortnight later than usual, and by the close of October the run was practically over, the first time in many years. The total of the July, August and September run of lambs at Chicago has fallen short of the one and one-quarter million mark. The total for the four months was 1,316,507 as compared with 1,725,315 last year and 2,594,922 in 1910. The July run of range stock in Chicago totaled about 155 double decks, a little over one-fourth as many as arrived there from that source in July, 1916. Most of the fat range lambs reaching the July market sold at $15.25 to $15.75, the top being $15.85, while feeders sold from $15 to $15.50. The first week of October found sheep and yearlings selling at new record prices for the season.

The Purebred Sire

(For obvious reasons, the name of the writer of the following letter is not published.)

To the Editor: In your issue of November 1 I notice your article on purebred Percheron stock, an article very ably and well written, giving farmers and breeders some good, sound advice, which, if followed up, will surely produce good results. I notice you give an estimate of how many purebred stallions there are in comparison to the number of horses in the states of Oregon, Washington and Idaho. There is one thing that must be brought to the attention of the farmer and the breeder, to wit, that as long as they are using anything as a sire short of a purebred sire they can not improve their stock.

The writer has always been an advocate of the purebred sire and has bought and bred some good ones, and has found it very hard to convince a great many farmers that it is cheaper to use a purebred sire at $20 than a common grade one at any price. I have in mind an instance of a farmer who had two good grade mares. I bought a purebred sire and advised him to use my horse, which he did at $20 each for service, the result being two fine fillies that weighed about 1450 each at 4 years old. At that time I had disposed of my first horse and bought another one, some bigger. Among those who came to look over the new horse was my friend who owned the two fillies. Of course, he was well pleased with the horse and asked about service fees. I stated that as I had to pay more for the horse than the colt did one cost me, I naturally expected a little advance for service, which I told him would be $25 for a living colt. "Oh," he said, "I cant stand that. So-and-So over here has a big grade colt he is standing for $12.50 service, and I think," he said, "I will breed to him. I can't stand your price." He bred to the grade horse. What was the result? At 4 years of age he sold his two colts for $212.50, while colts the same age from my horse were selling for from $450 to $600 per span. So you see as long as farmers look at the wrong side of things they will never improve their stock. I say farmers and breeders will have to get such ideas out of their heads, that they can get as good results from a cheap grade sire as they can from a purebred sire.

I notice that is one reason why so many are not willing to invest in good purebred sires, because the other fellow can come on the stand with an inferior horse and give his services cheaper than the one with the good purebred horse can afford to.

I may be a little bit radical, but, for my part, I would like to see an act passed in every state that would make it a felony to offer anything for service but a purebred sire that conforms in every way with our present inspection law. Then, and then only, will you get good horses, and people who take an interest will not be afraid to invest in a good purebred sire; then you would not have to come in competition with the fellow who has a cheap grade on the stand for half price, but you would be compelled to come into competition with first-class horses. Then, in a few years, farmers and breeders would begin to get results and good prices as well.

A SUBSCRIBER.

Veterinary

Dr. S. B. Nelson

Tooth May Be Diseased.—I wish to purchase a splendid horse. At present it seems to be afflicted in some way; he chews his food very fine but can not swallow it, and he spits it out. His teeth were filed, but it did not seem to help his trouble. F. J. S., Libby, Mont.

I would judge by the description that you give of the afflicted horse that he has a diseased tooth or a split tooth. A very carefull examination of the mouth will reveal one of these two troubles, and it will necessitate the offending tooth being extracted by a competent person.

Lumpy Jaw—I have a 3-year-old cow which has a lump the size of a gooze egg just under her right ear, which has a pus-appearing discharge. The lump was hard when lanced two months ago and lancing was of no benefit. J. B. K., Sixprong, Wash.

It is quite possible that your cow is affected with lumpy jaw. Write to the commissioner of agriculture at Olympia, Wash., requesting him to send a deputy to investigate the trouble and see if that is the disease affecting your animal. If it is it is an infectious disease and in many cases it is wise that the animal should be quarantined or even destroyed so as not to spread the disease.

A "365" Day Liniment

YOU ARE SAYING TO YOURSELF—"If I only knew of something to stop that Backache—help my Rheumatism—cure my Neuralgia, I would send and get it at once."

Get It. Relief. Gombault's Caustic Balsam will give you immediate A Marvelous Human Flesh-Healer and a never failing remedy for every known pain that can be relieved or cured by external applications. Thousands testify to the wonderful healing and curing powers of this great French Remedy. A Liniment that will soothe, heal and cure your every day pains, wounds and bruises.

Gombault's Caustic Balsam
The Great French Remedy
Will Do It

It Helps Nature to Heal and Cure. Penetrates, acts quickly, yet is perfectly harmless. Kills all Germs and prevents Blood Poison. Nothing so good known as an application for Sores, Wounds, Felons, Exterior Cancers, Burns, Carbuncles and Swellings.

"I had a bad hand with four running sores on it. The more I doctored the worse it got. I used Caustic Balsam and never needed a doctor after that." —Ed. Rosenburg, St. Ansgat, Ia.

Mrs. James McKenzie, Edina, Mo., says: "Just ten applications of Caustic Balsam relieved me of goitre. My husband also cured eczema with it, and we use it for corns, bunions, colds, sore throat and pain in the chest."

A Safe, Reliable Remedy for Sore Throat, Chest Cold, Backache, Neuralgia, Sprains, Rheumatism and Stiff Joints. Whenever and wherever a Liniment is needed Caustic Balsam has no Equal.

Dr. Higley, Whitewater, Wis., writes: "I have been using Caustic Balsam for ten years for different ailments. It has never failed me yet."

A liniment that not only heals and cures Human Flesh, but for years the accepted Standard Veterinary remedy of the world.

Price, $1.50 per bottle at all Druggists or sent by us express prepaid. Write for Free Booklet and read what others say.

WAR NEWS

114,000,000 Animals Killed

The United States Department of Agriculture collected the information that since the outbreak of the great war Europe's herds of meat-producing animals have decreased by 114,000,000 head. The statistics show—

That the loss in cattle amounts to	28,000,000
That the loss in sheep amounts to	54,000,000
That the loss in hogs amounts to	32,000,000
Total loss	114,000,000

AMERICA MUST REPLACE EUROPE'S BROKEN HERDS

This causes the big demand for live stock today. B. H. Heide, secretary of the International Live Stock exposition, states in the Country Gentleman: "I am finding as I travel over the country and visit the producers that there is a general belief that prices will **continue high for many years** and that **we shall never see the day of low prices for beef again.**"

PROFIT AND PATRIOTISM GO HAND IN HAND

All men that are engaged in the business of raising more live stock are fulfilling their duty toward their country—and the world. But more than that, they are engaged in the business that holds a sure promise for profit to themselves for many years to come.

WHERE IS YOUR PROFIT?

Unless you are raising stock none of this profit will come to you. Stevens county offers the opportunity. Our logged-off lands are sold at the same low prices and on 10 years' terms. It will pay you to go over the lands and have our neighbors show you what they are doing. If you want more information, we will gladly forward our free booklet. Write today and the folders will be sent by return mail.

Tuberculosis In Chicks

To the Editor: Would you please tell me what is the matter with my chickens? Some of them droop around and lose weight, and finally die. Some of them that I have opened had hard white spots on their liver and intestines. They are not all that way, but occasionally one gets sick and dies after drooping around for a month or six weeks. What can I do to rid my flock of this trouble? I feed my chickens whole wheat and warm bran mash with meat scraps about once a week.

H. K.

Nez Perce, Idaho.

This letter describes the symptoms of tuberculosis very accurately. The only certain way, however, to determine this is to have a microscopical examination made by some one who can identify the germ, and I would suggest that the specimen be sent to the state experiment station for examination.

There is no known cure for this disease. Fowls that show the symptoms should be killed and burned.

Fowls that are known to be infected should not be sold for market purposes. It is not likely that all the flock will be infected, and some of them only slightly. It will be perfectly safe to use these for eating. They are usually infected only in the liver and intestines, besides cooking will kill the germs. Those in advanced stages should be killed and burned. None should be sent to market, because they may be infected often badly, though the symptoms may not be apparent.

If one had a large or valuable flock it would pay him to have them tested by what is known as the Van Es test. This test is made by injecting a little avain tuberculin into the comb or wattles, just underneath the surface. If the fowl is infected there will be a swelling and discoloration inside of 24 or 36 hours. If desired I will be glad to give a full description of this test.

J. D.

The Roupy Season

Chickens are very susceptible to colds, and colds in the flock cause a great shrinkage in the poultry receipts just when receipts count for something. This is the roupy season. Prevention is worth a great deal more than cure and the whole secret of prevention is fresh air and dry quarters. More trouble is caused by closing up the poultry house in the fall with the purpose of making the chickens warmer than from any other cause. They must have fresh air if they are to withstand the cold. Crowding together in the house at night causes overheating and impure air and then doctoring for roup or colds. Keep the perches 18 inches apart or more and leave one side of the house open and there will be little trouble from colds. If you have more chickens this year than last do not crowd the perches closer together in order to get them into the house. Better build a new house or let some of them roost outside.

J. D.

Sells for $1800

Herefords Sell Well at Portland

To Klamath county, Oregon, goes the honor of paying top price at the Hereford sale, November 24, at the Pacific International stock show. The amount bid by D. W. Snyder of Swan, Ore., for the wonderfully perfect 2-year-old heifer Rose Donald, consigned by Henry Thiessen of Sweetwater, Idaho, was $1800. Tarkio Lad, a grand young bull, also a Thiessen consignment, went to Benton Bowers of Ashland, Ore., for $1000. No other animals reached that figure.

W. H. Daughtrey, president of the Portland union stock yards, was the heaviest buyer, taking 10 bulls for a total of $3625. Dixon & McDowell of Prineville, Ore., got six for $2365, and J. Frank Adams of Klamath Falls took home a choice consignment from the O. A. C. at $700.

A. L. Stevenson of Corvallis did hard and effective work on the block, assisted in the ring by Harry Cranke, who seemed a necessity at all the sales. The following is a complete list of animals sold, buyers and prices paid:

Bulls consigned by Henry Thiessen, Sweetwater, Idaho.

Truman, calved February 21, 1916, sold to Dixon & McDowell, Prineville, Ore.	$ 705
Tarkio Lad, calved July 22, 1916, —Benton Bowers, Ashland, Ore.	1000
Discretion 5th, calved December 2, 1916—Dixon & McDowell	375
Discretion 7th, calved January 1, 1917—Walter Grover, Halfway, Ore.	400
Beau Dewey, calved November 2, 1916—Baldwin Sheep Co., Hay Creek, Ore.	450
Idaho, calved September 16, 1916—P. W. Foster, Prineville, Ore.	500
Beau Quality, calved September 2, 1916—R. B. Dement, Myrtle Point, Ore	575
Beau Monitor, calved September 26, 1916—E. S. Dement, Myrtle Point, Ore.	410
Discretion 3d, calved September 4, 1916—Grover C. Avery, Corvallis, Ore.	550

Females consigned by Henry Thiessen:

Buda 2d, calved September 5, 1916 —Thomas Copeland, Walla Walla, Wash.	$ 610
Rose Donald, calved September 22, 1915—D. W. Snyder, Swan, Ore.	1800

Bulls consigned by George Chandler, Baker, Ore.:

Debonair 70th, calved April 20, 1916—Mat Hickey, Wenatchee, Wash.	$ 375
Debonair 75th, calved April 29, 1916,—Walter Grover	400
Debon, calved April 23, 1916—W. H. Daughtery, Portland, Ore.	300
Debonair 77th, calved September 21, 1916—W. H. Daughtery	310
New Man, calved April 21, 1916—W. H. Daughtery	375
Gambo, calved April 25, 1916—Walter Grover	575
Lyman Generous, calved September 27, 1916—Walter Grover	500
Woodrow, calved March 4, 1913—Dixon & McDowell	405

Female consigned by George Chandler:

Viola Generous, calved January 8 1917—Thomas Campbell	$ 360

Bulls consigned by A. B. Cook, Townsend, Mont.:

General French 5th, calved April 8, 1915—Dixon & McDowell	300
General French 1st, calved March 27, 1915—William Ledford, Prineville, Ore	$ 380
Prefer 37th, calved September 25, 1915—W. H. Daughtrey	330

Females consigned by A. B. Cook:

Lady Kitchener, calved April 10, 1915—Campbell & Young, Medford, Ore.	$ 205
Jessie P. 3d, calved March 30, 1915 —W. H. Daughtrey, Portland	300
Lady French 7th, calved September 7, 1915—W. P. Emery, Macleay, Ore.	330

Bulls consigned by W. P. Emory, Macleay, Ore.:

Maplethorpe 2d, calved November 4, 1916—W. H. Daughtrey	$ 305
H. Fairfax 9th, Calved June 20, 1916—Dixon & McDowell	355
H. Fairfax 8th, calved June 12, 1916—Mike Henley, Medford, Ore.	400
Handsome Fairfax 6th, 2 years old —Dixon & McDowell	225

Bulls consigned by Oregon Agricultural college, Corvallis, Ore.:

Gladiator, calved March 12, 1916—George Dement, Myrtle Point, Ore.	$ 600
Mohammed, calved April 2, 1916—W. H. Daughtrey	430
Petronius, calved March 2, 1916, —H. D. Dunham, Post, Ore.	525
Chic Beau, calved January 6, 1916, —J. Frank Adams, Klamath Falls, Ore.	700

Bulls consigned by Platt Bros., Genesee, Idaho:

Paul, calved June 6, 1916—W. H. Daughtrey	$ 400
Spellbinder, calved May 20, 1916—William Ledford	365
Prospect, calved May 31, 1916—H. D. Dunham	340
Woodrow, calved June 18, 1916—William Ledford	400
Excelsior, calved June 14, 1916—William Ledford	300

Bulls consigned by J. D. Miles, Livingston, Mont.:

Gray Field Prince, calved January 10, 1916—W. H. Daughtrey	$ 675
Winslow, calved June 20, 1916—W. H. Daughtrey	400

Bulls consigned by J. W. McKinney, Salem, Ore.:

Mischief, calved May 28, 1916—A. Ladigen, Trout Lake, Ore.	$ 280
Laurence, calved September 20, 1915—William Daugherty	225

EGGS

The high price of eggs should stimulate egg production. Egg production can be greatly increased by proper care and correct feeding. Our Clover Leaf Scratch is the ideal feed for egg production and is generally used by our most progressive poultrymen. Samples and price on application.

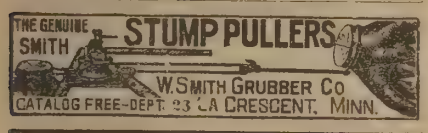
Evolution of Marketing.

We are solving the marketing question by the process of evolution. Marketing began as a system of barter, in which one commodity was exchanged for another. The whites bartered with the Indians, giving tobacco, whisky, beads and trinkets, for fur skins and other valuables. The pioneers bartered among themselves, exchanging corn for bacon, bacon for wheat, wheat for labor and labor for other commodities. As labor came to be more specialized, they paid the carpenter, the blacksmith, the shoemaker, the storekeeper and the preacher, mostly in the things produced on the farm.



It was a step forward when the "storekeeper" became the "middleman' to exchange dry goods, groceries and other manufactured articles for farm products. He was a central agent through whom the people might buy, or of whom they might inquire, instead of every one finding his own markets. He was a germ of the board of trade.

The next period was marked by the discovery of steam; the almost universal use of money as a measure of values; the building of railroads; the connecting of continents with steamship lines and cable lines; a world commerce and world markets; the organization of trusts and combines to meet the new conditions; an international money standard and an international exchange of credits.

The last period named developed anti-trust organizations, anti-trust laws, farmers' organizations, fruit marketing agencies, etc., all of which have been educational, but can not, in my judgment, compete successfully with the organized commercial agencies.

Forego Fraternity Dances.

Co-eds of the University of Chicago have decided to forego their fraternity dances this winter and give the money thus saved to war relief work.

WALNUTS

can be grown on a great many farms in the northwest. If you had planted grafted walnut trees a few years ago you could be selling the world's finest nuts today for from 25c to 30c per lb. Will you have any to sell a few years from now? Our grafted Franquettes are the best on the market and are sold as low as many seedlings.

6 to 10 ft. trees, each	$1.25
Dozen lots, each	1.15
Hundred lots, each	1.00
Thousand lots, each	.90

Special prices to the trade.

SPOKANE, WASHINGTON

HOGS SELL AT PORTLAND.

Interest in Hogs Is Returning.

The combination hog sale at the Pacific International stock show at North Portland November 20, resulted in a range of prices that at least show a returning interest in hog raising. Thirty-four hogs went through the ring for a total of $2010, or an average of $59.12. Most of the consignments were Poland Chinas, and they sold best, except the three very fine Berkshire sows. The Durocs and Chester Whites were young stock and the latter reduced the average a little.

Top price of $160 was paid for Belle's Beauty, a magnificent Poland China sow consigned by A. L. Wilson of Greenleaf, Idaho. She went to S. M. Mears Jr. of Woodland, Wash., who is building up a herd sure to be heard from. Colonel J. W. Hughes did good work on the block.

The following is a complete list of animals sold, buyers and prices paid:

Poland Chinas.

Consigned by Ray J. Fox, Lyons, Ore.:

Big Silk, gilt, farrowed March 28, 1917—Sold to William Schulmerich Hillsboro, Ore.	$62.50

CASE

Founded 1842 — Famous the World Over

Values Impossible Elsewhere

Because Case has been building Steam Engines for over forty years, because its plant covers 140 acres and employs over 4000 skilled mechanics—because of all of this experience and these manufacturing facilities, it is possible for Case to include values in Case Steam Tractors that would be impossible for a lesser organization.

You profit because of these reasons and because of quantity production. You get the best possible Steam Tractor at a reasonable price. You are assured of satisfaction for years to come.

The Case line of Steam Tractors is complete—8 sizes. We have not neglected the development of our Steam Tractors because of the popularity of our Kerosene Tractors. In some parts of the country and for certain uses, men prefer steamers to gas engines.

A pictured description, with specifications, of the complete line of Case Steam Tractors, will be mailed free upon request. Write for your copy today, or for any other information as outlined below. It is all free.

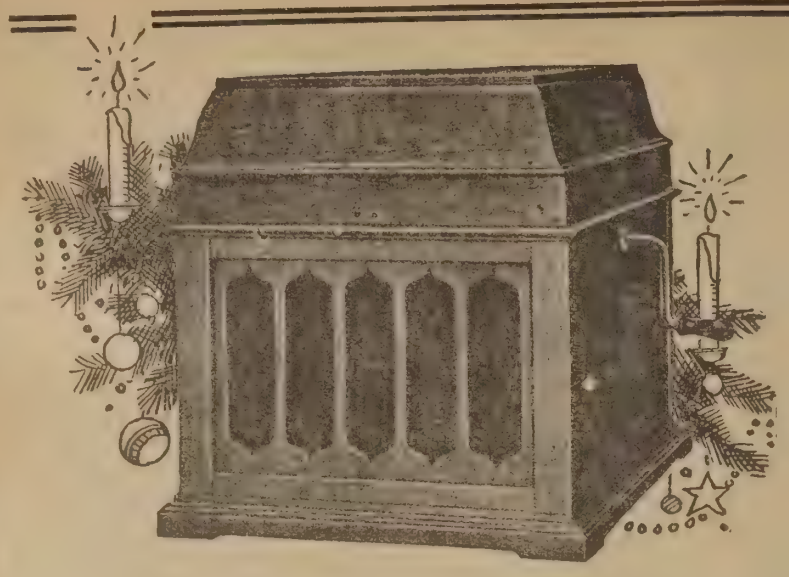
Works on any land, on hillsides and marshes where horses cannot operate.



Easily rips out any stump that can be pulled by any horse power machine at about one-half the cost. Safer, better and cheaper than powder. One man with a K can outpull 16 horses. Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48 ton pull on the stump. Made of the finest steel. Guaranteed against breakage. Endorsed by U. S. Government experts.

BATTEN'S S. C. REDS

I have 50 of the best cockerels that I have ever seen in one yard that I am offering at low prices, quality considered, in order to move them quickly to make room for younger stock. Prices range from $5 to $15 and can give you good selection if you will write me your wants. Can spare a few good pullets at $2.50 each. Let me hear from you.

E. F. BATTEN, HOOD RIVER, ORE.

What kind of music will there be in *your* home this Christmas?

CHRISTMAS AND MUSIC are inseparable. You cannot think of Christmas without thinking of music—all kinds of good music. What kind of music will there be in *your* home this Christmas? What instrument and what voices will entertain you?

Have you ever stopped to realize that all voices, and all musical instruments, excepting one, have their limitations? As wonderful as a piano is, it can give you only piano music; as beautiful as an organ is, it can give you only organ music; as marvelous as the human voice is, it can only sing. It is the same with the violin, the cornet, the accordion or any other instrument which you might have in your home or might consider purchasing. These are excellent in their way, but we are sure you will agree that none of them is completely satisfying.

It is different with the New Edison Diamond Amberola. It has no musical limitations, for it is all voices and all instruments in one and it brings into the home all kinds and classes of music, from the greatest of operatic numbers sung by the most famous of singers to the simplest of popular and comic songs sung by the cleverest performers in their line; from the performances of great military bands and symphony orchestras to the snappy music of the ever popular banjo.

The New Edison Diamond Amberola is not an instrument that you must forbid the children touching for fear of putting something out of order. Even a very young child can readily learn to operate this marvelous instrument, for it is simplicity in itself and is not readily put out of order, and the Blue Amberol records are almost unbreakable and unwearable. With the Amberola you do not even have to bother to change needles. There are no needles to change. Instead of needles Mr. Edison uses a GENUINE DIAMOND, ground and polished to fit perfectly in the grooves of the record, and so perfectly round and smooth that it has no effect on the record. As you know, a diamond never wears out. To operate the Edison Amberola all that is necessary is to put on a record and lower the reproducer so as to bring the diamond stylus (reproducer point) into contact with the record. Besides keeping the Amberola wound up and oiled, there is nothing else to do.

Read Our Liberal FREE TRIAL OFFER

It is Mr. Edison's wish that you hear his Diamond Amberola in your home. In order that Mr. Edison's wish should be fulfilled, we will place a New Edison Diamond Amberola and a choice selection of Blue Amberol records in your home for three days. Play them to your heart's content, invite your friends in to enjoy the music with you. At the end of three days tell us that you want to buy the instrument and records for cash, that you want to buy them on terms, or that you do not care to purchase at that time and request us to call for the Amberola and the records. We leave it entirely to you whether you keep the instrument and records or whether you send them back. Whatever your decision, we shall consider the matter at an end. You will be under no obligation whatever. We will be the ones to feel obligated to you for permitting us to place the instrument and records on trial in your home. Thousands of families throughout America are enjoying these free trials because of Mr. Edison's desire that no one should miss hearing his marvelous invention. Why not you? You are just as much entitled to the opportunity as anyone else, and there is no reason why you should not take advantage of it. When requesting your free trial, please use the coupon at the bottom of this page.

The Music You Get When You Own an EDISON AMBEROLA

Music was never more welcome in the American home than it is today. Home has never meant more to Americans than it does today. With some of our boys at the front and many preparing to go, the tenderest and deepest emotions surge through our souls. It is then that nothing is more appropriate than good music as the companion of our leisure hours. Whatever your tastes, whatever your mood, there are many selections in the Blue Amberol Record Catalog to suit—beautiful old hymns that seem to just lift you out of your immediate surroundings to a higher plane where the spirit is free and unfettered by the irksomeness of the daily routine—thrilling band records that just make you feel like getting up and marching around the room—noble patriotic numbers that would stir the heart of a traitor—tender old and new songs and ballads that go straight to your heart—majestic grand opera that appeals to the deepest of human emotions—lively dance pieces, ragtime and funny records—entertainment of all kinds for young and old.

So that you may have an idea of the many wonderful selections to be found in the Blue Amberol Record Catalog, we have picked a few here and there and they're printed below. Look them over. You are sure to find many of your favorites.

More Liberty Bonds

Other Issues to Come Next Spring

Semi-official information coming from Washington, D. C., indicates that the government is going to need about $3,500,000,000 more money for war purposes by July 1 of next year. How to raise this amount is a problem that the treasury department and congress will have to deal with. It is a foregone conclusion that at least a large share of it will be raised by another Liberty bond issue, though it may be that much of it will be raised by taxation of some kind. It is reported that a wide difference of opinion as to the method of raising it exists in congress. Many are opposed to another bond issue at this time, but many more are opposed to increased taxes and further argue that it is impossible to create the machinery for collecting the taxes that would have to be levied. No taxes will likely be levied and no bond issue authorized before early spring, however.

Congress Reassembles.

Congress has reconvened at Washington. The gathering after recess took place Monday, and plans for the business of the session are already under way. In his message, President Wilson made it clear that he desired the attention of the lawmakers to be kept centered on necessary war legislation, allowing other matters to come in only when of very vital importance.

Heavy Fighting Continues.

There have been no great victories for either side in the war for the past several days, though fighting of considerable violence has been in progress. The Italians have succeeded up to this writing in holding the Germans in check, and British and French reenforcements have reached them and given aid. In the north, where the British made such gains week before last, the Germans made violent counter attacks last week that regained some of the trenches lost, though the advantage still remains with the allies. On the east, Russia is still well nigh inert, though enough of the Russian army remains loyal to the allies to hold a considerable portion of the German army in the east.

Want Pay Increased.

The organizations of railway trainmen and railway conductors have formally petitioned their employers for increases in wages amounting to an average of practically 40 per cent of what they are now getting. They have allowed the railroads until December 31 to consider the petition before making a reply. Recently a strike was threatened, but President Wilson called a conference of the workmen and laid before them argument for conciliation without a strike at this crucial time in the life of the country. It is not believed that any tie-up of rail operations will result from the movement for increased wages.

Seattle in Furore.

Not primarily because Major General Greene, in charge of the great army training camp at American Lake, Wash., where some 40,000 soldiers are stationed, ordered none of those soldiers to visit Seattle, but because Mayor Hiram C. Gill and his police force refused to drive vice and immorality out of the city, the people of Seattle are up in arms and are demanding the impeachment of Gill. General Greene first warned the city administration that unless what he claimed to be a great vice ring was driven out of the city he would forbid his soldiers visiting the city. The warning was unheeded. Then he placed the prohibition on his soldiers. Immediately Seattle was in ferment, and last week a massmeeting of more than 5000 citizens voted without a dissenting voice in favor of impeaching the mayor. Gill was formerly mayor of Seattle, but was recalled under charges of winking at vice conditions. He was again elected, however. New recall actions against him are now probable.

Have Huge Incomes.

Two hundred and six men with millionaire incomes, 10 of them with annual incomes of more than $5,000,000 and 196 with incomes ranging from $1,000,000 to $5,000,000, are shown in the income tax figures of the internal revenue bureau for the fiscal year 1917.

Remove "Oleo" Tax?

A recommendation for the removal of the internal revenue tax of 10 cents a pound on oleomargarine has been made by W. H. Osborn of the revenue department of the government. The removal of the tax is urged on the ground that it would stimulate the production of the oleo as a fat during the war, when fats are greatly needed. It is expected that the dairy interests will wage a vigorous fight against the proposal of free oleomargarine.

Russia Asks Armistice.

The Bolsheviki government in Russia has formally presented an offer of an armistice to Germany and Austria, and both these countries have accepted the offer. A meeting of representatives of the governments was held Sunday and the opening of negotiations made. It is generally predicted that the negotiations will be as long drawn out as it is possible for Germany to make them, as that country's aim seems to be to keep Russia inert as long as possible if no separate peace is actually obtainable at this time.

American's Fall in France.

Reports coming from the battle front where the British and Germans have been fighting so vigorously for the last month tell of the activities there of a number of American railroad engineers who were assisting in railroad construction work during the hottest battles. It is reported that some of these Americans became trapped between the two battle lines, that they lay low in shell pits until the British lines had advanced far enough to permit them to dash into the British lines under fire, and that they then seized rifles and joined in the fighting bravely. British officers praised the manner in which the Americans acted, when it was no part of their program to take part in actual gun warfare, but in construction work only.

Bolsheviki and I. W. W.

Almost Identical in Their Fundamental Ideas

The Bolsheviki in Russia and the I. W. W. in the United States are almost identical in their fundamental ideas about government. The I. W. W.'s do not accept the principles of the constitution of the United States and the laws made pursuant thereto. Only when the laws are enforced against their misdeeds do they cry out about their constitutional rights.

The common creed of Bolsheviki and I. W. W. is that the constitution of society under a regime which recognizes private property in land and the instruments of production is wrong, and that any government founded on that doctrine ought to be overthrown. But all civilized governments have been founded on that doctrine.

The doctrine of property and property rights is more fundamental than any constitution or laws. Private property has not been created by law; it is the discovery of the human race, and laws have merely recognized and systematized the arrangements which the race automatically discovered as necessary to its perpetuity and welfare. In origin it is very like the family unit and lies deeper than law and constitution.

Rightly is it said that peace in the Bolsheviki terms means the overthrow of every government—all law. It would but end in the primal struggle of man with man for existence, the impoverishment of the race, the overthrow of civilization. The idylic dreams of the Bolsheviki dreamers will prove to be only nightmares.

Russian nihilism and American I. W. W.'ism are of a class. They alike aim at a reconstruction of society on an artificial basis, unsupported by successful historical experiences, unadapted to human nature, certain to result in universal poverty unless it were successful in reducing the race to slavery to an autocratic bureau.

Farmers Are Preventing Wastes

Canning Has Resulted in a Saving of a Large Amount of Vegetables and Fruit of a Perishable Variety This Season

KENNEWICK, Benton County, Wash., Nov. 23.—Fall work is up to normal with the exception of grain seeding. Usually the bulk of our acreage is seeded to fall grain, but this fall there has been almost no fall seeding done. Nearly all the wheat farmers will sow in the spring and the early Baart variety will almost replace the bluestem. The last few years have demonstrated that it is far superior to bluestem in the region of light rainfall. The Baart matures earlier and yields heavier. There has been no crop losses because of unfavorable weather conditions, in fact the weather has been especially favorable for harvesting of all crops. The farmers are "Hooverizing to a remarkable degree, so far as saving fruit and vegetables which ordinarily go to waste. A saving of waste especially by canning has been remarkable this year. Many of the dealers have sold more than 10 times the usual number of containers. Corn, middlings and shorts are being used to some extent in place of wheat for hogs, but the fact that corn has been held very much higher than wheat has materially prevented the substitutions that should have been made. The water users in the Kennewick district are planning the organization of an irrigation district with a view to purchasing the irrigation system and enlarging it. This will result in maximum production in the entire district next year. As there is almost no opposition to the organization of the district and the plans for development, there seems little doubt that this will be accomplished before next season's crops are planted.

LEE M. LAMPSON

Feed Situation Trying.

SPOKANE, Spokane County, Wash., Nov. 23.—The feed situation in Spokane county, is somewhat trying at the present time. This is especially true when it comes to the feeding of grain or grain substitutes, owing to the fact that wheat is needed for human consumption to such an extent that our farmers are endeavoring to sell their wheat in every instance, rather than to feed it to stock. There is a special demand for mill products to feed the hogs and cattle. The mills are unable to provide middlings, red shorts, or bran and shorts in sufifcient quantity to meet the demand, although they are running to their full capacity, at the present time. There seems to be little relief from the present situation unless we can import corn from the middle west, to supplement the by-products of the mill. J. R. SHINN.

Little Wheat Sown.

GRANDVIEW, Yakima County, Wash., Nov. 24.—Wheat raisers tell me that almost no wheat has been sown this fall, but they will sow in the spring. Fall work in the valley is about as usual. Most of the potatoes are dug, but not much corn husked yet. The hogs that are raised here have been fed largely on alfalfa and waste fruit and there are not many for sale. I don't know of any farmers that have wheatless days. Some of the farmers are having meatless days, on account of high-priced meat. Some are renting their farms and are going to try a trade of some kind.

E. H. FAULKNER.

Plow Without Moisture.

COLVILLE, Stevens County, Wash., Nov. 24.—Even with the lack of moisture there has been a large amount of fall ploying, the weather conditions otherwise being very favorable. The dry conditions have prevented fall seeding to some extent. In favored districts the seeding is about normal and the stand looks good. In most districts, however, seeding is below normal and the grain is but little more than sprouted. The weather has been favorable for harvesting, and the losses from frost are but slight. The question of "Hoverizing" is so much of a personal question that it is hard to apply to any class of people. The great majority of people either fail to see the necessity of "Hooverizing" or are unable to purchase substitutes economically. The present low price of beef, especially that offered the farmer, makes it impossible to secure an economical substitute. Many farmers are using shorts very extensively in the growing ration and are substituting barley for wheat in the fattening ration.

A. R. HAHNER.

Are Making Cheese.

PROSSER, Benton County, Wash., Nov. 24.—The weather is dry and cool, with no rain yet to speak of. Plowing and seeding are not up to the normal this fall in this district on account of the dry weather. No crop losses in this district due to cold or other causes. The farmers are Hooverizing in some ways. Most of the farmers don't use meat at all; some of the farmers sell their hogs and butcher the steer calves. For substitutes for wheat they use shorts and some use small hand mills to grind their own corn. In the valley the farmers are feeding their hogs squash and corn and in the upland or wheat country they feed wheat mostly, for it is the cheapest feed they can get. The most interesting experiment in this community is making cheese from skimmed milk. Most of the farmers' wives are trying their hand at cheesemaking. A good slogan is "get a hand mill and make your own corn meal."

G. W. WILGUS.

Should Use Sulphur.

MEDFORD, Jackson County, Ore., Nov. 23.—The work in relation to fall crops has been very backward. We have not had rainfall enough to make plowing possible and only a slight amount of seeding has been done. A few farmers have seeded wheat on corn land and in some places on potato land. We have no crop losses due to cold weather. Our farmers are doing everything possible to economize in the way of feeding live stock, and one of our large stock raisers has advertised that he will pay one cent per pound for acorns, and the small boys all over the community have been gathering acorns for some time and disposing of them to this farmer. Farmers are feeding more straw than usual. Beet tops and cuttings are being utilized more than ever before. Farmers are buying more land plaster for alfalfa since our demonstrations and experiments have proved that we can greatly increase our tonnage from the use of land plaster or pure sulphur. Our experiments proved that the sulphur in the land plaster is doing the business. Where sulphur is supplied we recommend it to be used in the fall of the year so that it will have plenty of time to combine with the lime in the soil, and thereby form calcium sulphate, which is readily taken up by the plant. We have as high as 2000 per cent increase on alfalfa by the use of sulphur, or, in other words have secured two tons and better at a cutting against practically nothing where fertilizer was not used.

CLAUDE C. CATE.

Some Frost Losses.

HELENA, Lewis and Clark County, Mont., Nov. 8.—Seeding and fall plowing are progressing favorably. There was some loss of potatoes and apples from the cold of October 18 and later.

W. A. MITCHELL.

Mill Feed in England.

Mill feed is still reported very scarce in England, though a little improvement is visible. There is not sufficient output yet to soften prices in the least, coarse middlings and bran easily making around $63 to $72 per ton, respectively, those figures being the official maximum in each case.

Wheat Comes From Canada.

Since April of this year wheat and wheat flour have been imported in greatly increased quantities from Canada. This is attributed principally to the fact that on April 16 Canada removed the duty on wheat imported into that country, which action automatically admitted Canadian wheat free of duty into the United States under the provisions of the tariff law of 1913.

For the nine months ended with September of this year we imported wheat from Canada to the extent of 21,490,269 bushels, over 14,000,000 bushels of which came in free after April 16. The imports of wheat flour during these nine months totaled 403,270 barrels, of which 297,695 barrels came in free of duty. For the corresponding nine months in 1916 the total imports were 157,289 barrels, and in 1915 only 90,499 barrels.

World's Food Situation.

W. J. Hanna, food controller of Canada, has been a recent visitor to the offices of the United States food administration in Washington. Mr. Hanna says that recent developments in Europe, official correspondence and the latest crop estimates make it plain that the world food situation today is serious beyond anything that we could see a few months ago. Mr. Hanna and Mr. Hoover are working in close cooperation.

Southworth's Centennial.

Plans are under discussion for an appropriate observance next year of the centennial anniversary of the birth of Mrs. E. D. N. Southworth, the popular novelist.

Successful Crops

You may be certain of big profitable crops if you adopt the most up-to-date method of seed grain treatment as recommended by the U. S. Dept. of Agriculture—

FORMALDEHYDE
The Farmer's Friend

This powerful disinfectant destroys grain smuts, rust and fungus growth. It prevents flax wilt, also scab and black-leg diseases of potatoes. It rids stables and chicken houses of disease germs and flies. Formaldehyde is surely a great boon to the farmer. Our Formaldehyde at your dealer, 35 cents in pint bottles will treat 40 bushels of seed. Big illustrated Hand Book sent on request—free.

Perth Amboy Chemical Works
100 William Street New York

When you write to advertisers be sure to state that you saw their advertisement in this paper.

A New Idea in a Small Tractor Plow Outfit

You can now get a small Avery 5-10 h.p. Tractor with a special hitch and lifting device and use your old horse plow.

Attach your plow to the drawbar and connect the lifting chain and you have a complete tractor plow outfit. If you have hilly ground and want to use both right and left hand plows, attach them as shown here. You can raise and lower the plow without getting off the tractor. With the plow raised you can back up in short spaces easier than with horses.

This tractor is just the size for doing all the work on small farms or for light work on larger farms. The price is the lowest of any tractor built.

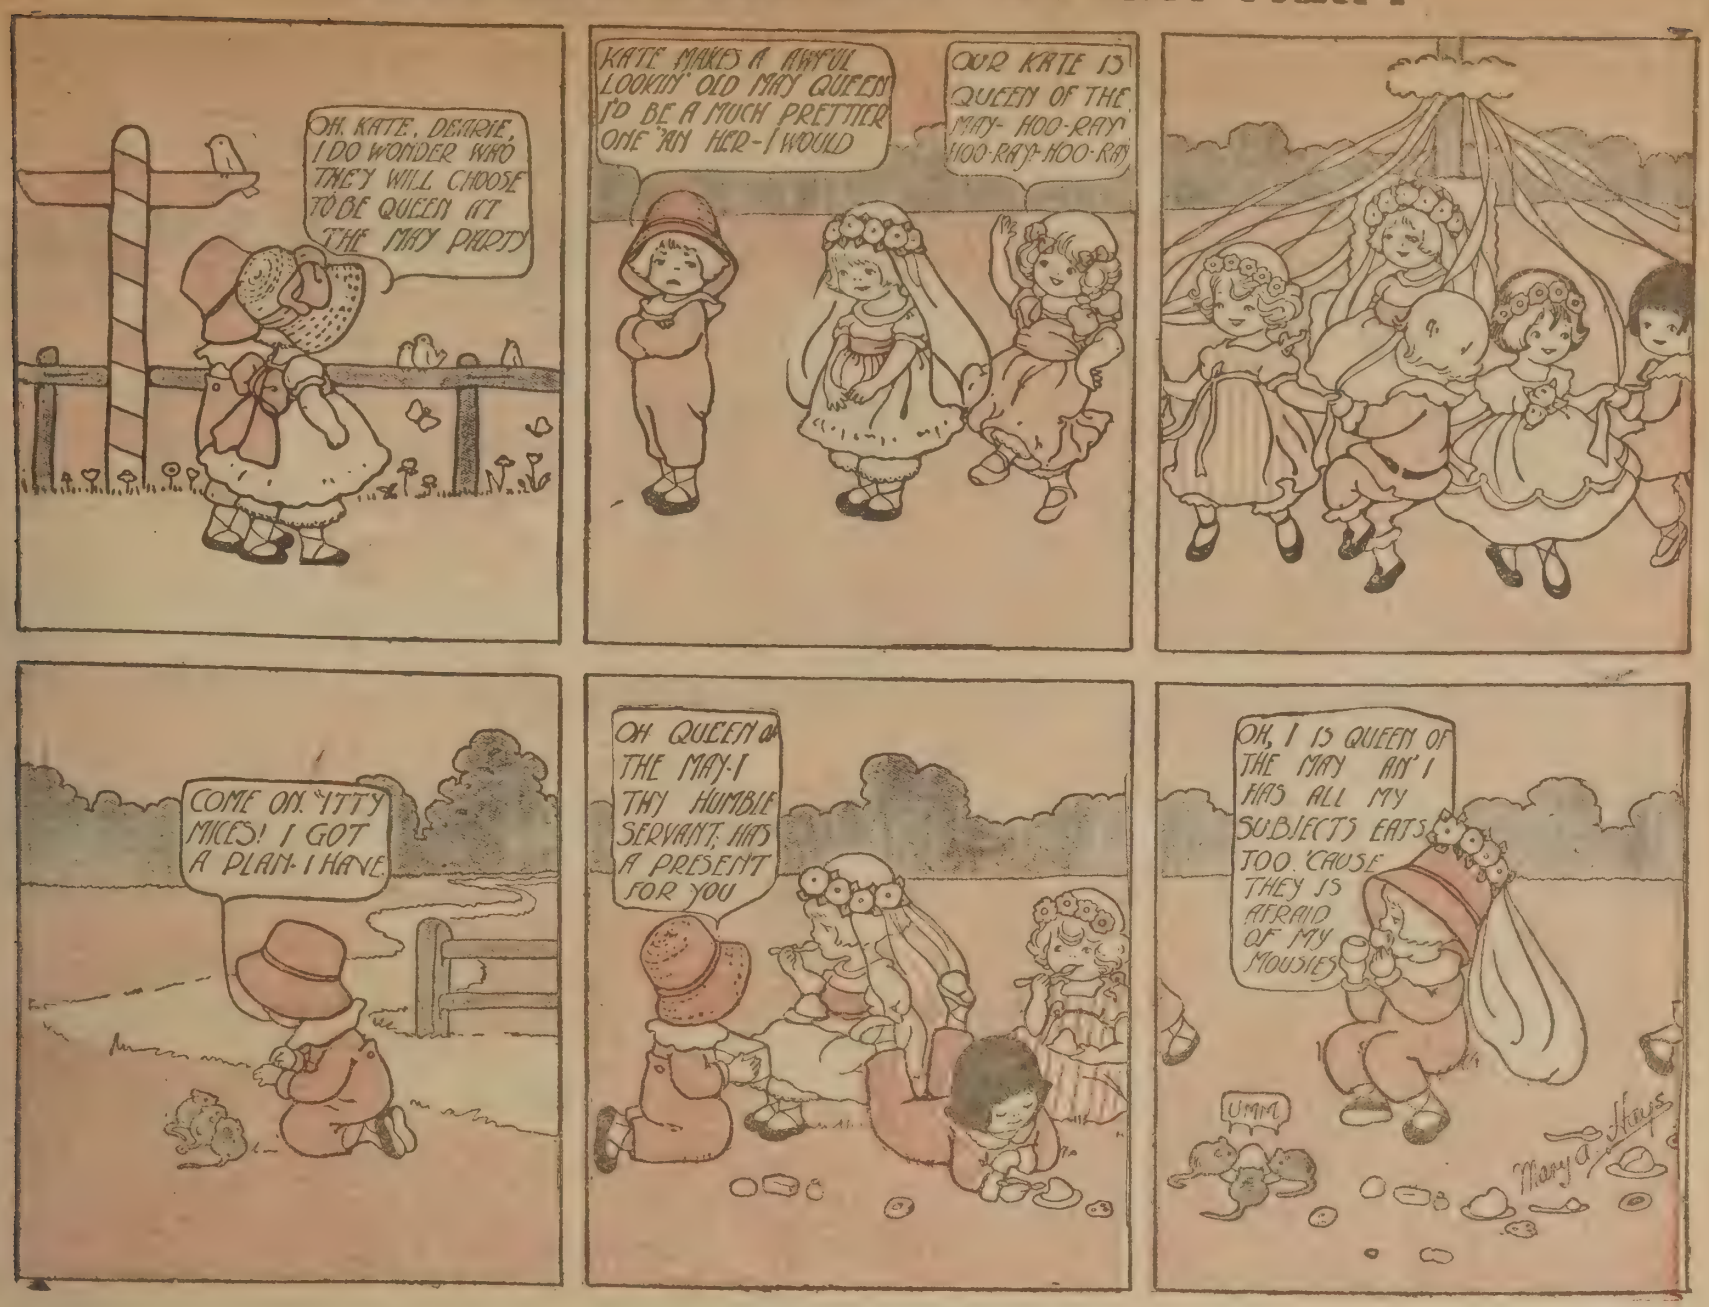
There is a size Avery Tractor to fit every size farm. Six sizes in all — from this small 5-10 h. p. up to a large 40-80 h.p. There is also an Avery Tractor Plow in light and heavy styles to fit every size tractor.

Avery Two-Row Motor Cultivator

Avery "Yellow Kid" Thresher

Motorize all your farm work with an Avery Tractor and Motor Cultivator

Do your cultivating with motor power. The Avery Two-Row Motor Cultivator makes it possible for one man to tend 100 acres of corn. It will also cultivate cotton and other row crops. By getting a special planter attachment you can plant your crops with the same machine. You can use it too for many other kinds of light field and belt work.



Only with modern Motor Farming Machinery is it possible for you to raise the largest crops and to save them after you raise them. Here is an ideal Motor Farming Equipment—an Avery Tractor and Plow to prepare your seed bed and plant and harvest grain crops—an Avery Two-Row Motor Cultivator to plant and cultivate your row crops—and an Avery Thresher to thresh your grain crops.

The AVERY is the most complete and up-to-date line of Motor Farming Machinery built. Write today for complete catalog and ask for special information about the machinery you are particularly interested in.

JERRY MACJUNK LEARNS SOMETHING OF HAREMS

THE BARRIER

By REX BEACH

Author of "The Spoilers," "The Ne'er-Do-Well," "The Silver Horde," etc.

Copyright, 1908, by Harper & Brothers.

SYNOPSIS.

Gale is trader of Flambeau, a frontier on the Yukon. Lieutenant Burrell is sent to this camp to preserve order. The day of his arrival Necia, Gale's daughter, returns from a mission school. As she and Burrell are talking, two halfbreed children and a squaw appear, and Necia, noting the lieutenant's look of disgust, informs him that they are her mother, brother and sister. Poleon Doret, a Frenchman, returns from Dawson, and on the same boat comes Runnion, a desperado. In attempting to make Runnion leave Flambeau, Burrell is shot by him and only the quick hand of Poleon saves him.

As Necia is arrayed in a ball gown, which Poleon brought her from Dawson, Burrell happens in. He is amazed at the ease with which she wears the dress and at the fairness of her skin. She confesses to a feeling that she, Necia, should be called "Merridy."

"No Creek" Lee, a prospector, after years of hard luck, makes a big strike. Runnion returns, and with him Stark, who has come to grubstake the miners and open a saloon. Stark causes Gale and the Squaw Alluna, great uneasiness. The men of the camp leave for Lee's claim, Necia, longing for riches so she may become like other girls, begs Burrell to follow them with her. Burrell knows that Necia is coveted by half the men in the camp and that it would cause a great uproar should he spend a night alone with her in the woods. This would be an easy way to compel them to an open state of enmity, which would be preferable to the indifferent toleration which he has met among them. This together with her entreaties and the confession that she loves him, sweeps aside all discretion and together they start on the journey.

Poleon Doret sang gaily as he set out for the claim with Gale. Here was a gift of wealth for him to lay at the feet of Necia with his laughter, his music and his heart. On the way Gale tells him the story of a good girl, loved by two men, a good man and a bad man, and how the he-devil had won in the game of love. That night the party camps in the woods, Stark, Runnion, Lee, Poleon and Gale. In the morning they draw straws to see who will have first choice of claims, Gale and Poleon receiving the lucky ones.

Sitting by the campfire when night had fallen, Necia begs for stories of Burrell's home life and of his sister. The girl apparently realizing her peril, wisely chooses this means of awakening in the lieutenant his slumbering conscience. She succeeds, for Burrell's honor is old and persistent. The next morning the two resume their journey, reaching Lee's cabin before the other party. Necia locates three claims for herself, but no amount of pleading will induce Burrell to stake one.

A few hours later Lee and the others arrive. That afternoon as Runnion, Stark and Poleon are locating some distance from the camp, Runnion makes some insinuations about Necia and Burrell which throws Poleon into a frenzy of anger and he vows that either Burrell or Runion will pay for them with his life.

After supper, Stark devotes himself to Necia, telling her the story of a girl about her own age who had chosen a young Bennett over another lover, Gaylord, and had married him. Then how Bennett came back one night to find his wife murdered and the kid gone. Of how they had chased Gaylord for months, but had finally lost track of him. Stark is about to tell the name of the little girl, but at this point a shot rings out and Gale jumps half way across the room crying: "My God, I've killed him." But the bullet hisses Stark by six inches and lies buried in a log.

With all the treachery and cunning conceivable, Stark and Runnion have systematically schemed to best Gale and Poleon out of their claims. They dispose of Necia's rights by saying that, as she has not yet reached 18, she has no legal authority to hold mining claims. As they are wrangling, Burrell slips out and restakes Necia's claims for himself, telling Necia afterward that they are hers as soon as she becomes of age.

Once home, Gale tells Alluna how Stark has proven himself to be bullet-proof. Alluna gives the trader a knife and tells him to kill Stark. As Gale goes out, he says that he can not do it in cold blood, but he slips the knife and scabbard inside the bosom of his shirt.

Corporal Thomas, guessing Necia's love for Burrell, tells her the story of another soldier who had loved a half-breed girl and how it had lost him position, honor and all that was worth while in life. Afterward Necia seeks her father in a rage and asks him why he married her mother and made her different from other girls. Then, for the first time, she learns that her father has never married Alluna. Necia tries to comfort herself with the thought that Meade's love reaches beyond blood and station and that he will marry her in spite of these things.

The steamboat comes that day, loaded with men. Stark's saloon is running, and by night Flambeau is a mining camp.

CHAPTER X.

Meade Burrell Finds a Path in the Moonlight.

"No Creek" Lee had come into his own at last, and was a hero, for the story of his long ill-luck was common gossip now, and men praised him for his courage. He had never been praised for anything before and was uncertain just how to take it.

"Say, are these people kiddin' me?" he inquired, confidentially, of Poleon.

"W'y? W'at you mean?"

"Well, there's a feller makin' a speech about me down by the landing."

"W'at he say?"

"It ain't nothin' to fight over. He says I'm another Dan'l Boom, leadin' the march of empire westward."

"Dat's nice, for sure."

"Certainly sounds good, but is it on the level?"

"Wal, I guess so," admitted Poleon.

The prospector swelled with indignation. "Then, why in hell didn't you fellers tell me long ago?"

The scanty ounce or two of gold from his claim lay in the scales at the post, where every new-comer might examine it, and realizing that he was a never-ending source of information, they fawned on him for his tips, bribing him with newspapers, worth a dollar each, or with cigars, which he wraped up carefully and placed in his mackinaw till every pocket of the rusty garment bulged so that he could not sit without losing them. They dwelt upon his lightest word, and stood him up beside the bar where they filled him with proofs of friendliness until he shed tears from his one good eye.

He had formed a habit of parsimony born of his years of poverty, and was so widely known as a tight man by the hundreds who had lent to him that his creditors never at any time hoped for

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B. M. A., M. D. (Johns Hopkins University.)

Why You Should Consult Your Doctor When Long Unhappy

Dr. Hirshberg

Look around among your friends: How few know their own good, or, knowing it, pursue it! If you are well, have a roof over your head and your share of loved relatives, good books to read, good food and comfortable clothing, you have the means to the end, but your happiness will also depend upon pursuing it.

True happiness rests upon more than mere contentment and comfort. To say that certain "darkies" are happy people, because they laugh and sing, yet know not what a day may bring forth, is not the real article. The negro who heard the whistle blow and remarked, "It's dinner time for some folks, but it's just 12 o'clock for me," is nearer an appreciation of true happiness than many a rich man unable to digest his food.

The ways to bliss are not always on beds of down. "He that has no cross deserves no crown." Happiness is the end and aim, and ease, content, goodness and pleasure may be means to securing it.

Little Troubles Vanish.

We are rarely so happy, or so unhappy, as we suppose ourselves to be. When you have some unpleasantness, a quarrel or misunderstanding with your best girl, if your business has been bad or a note must be met the next day, your night's rest and sleep may be made miserable by the wrought-up feelings of unhappiness you have conjured.

Yet, in reality, these are mere petty, temporary, evanescent disappointments, which 20 fair hours generally dissipate. "That something still which prompts the eternal for which we bear to live, or dare to die," makes us yearn all the more for the happiness which often appears to recede at our approach.

Founded on Health.

With good health, man is the artificer of his own happiness. Health and mirth are not in themselves happiness, which is sometimes possible—as with Tiny Tim—when strength and power are absent. Nevertheless, they contribute largely to the ultimate reality of this "good hour" or "bon heur," as the French call it.

The first trench to be raided for a victorious happiness is that of your whole physiology. If you are moody, miserable and unhappy, your blood, thyroid glands, intestines, liver or spleen may not be in order. Whichsoever it may be can not be "supposed" or "guessed." An honest survey with hospital apparatus, blood tests, Abderhalden gland tests, X-ray photographs of the lungs, liver, intestines and heart may give a clear insight into the cause of and a way to remove the source of your unhappiness.

Merry, mirthful individuals with quips and jests and a right hearty wit are not always the happiest. Joys are bubble-like. What makes them bursts them, too. Happiness is a permanent, all-pervading substance of glowing solidity and health. It is hard to achieve, but, once built up, it is not easily torn down.

MAKE THE FARM HOME MODERN

By PROFESSOR P. G. HOLDEN.

Why should a farmer's wife be compelled to carry water from a distance when running water and drainage may be installed in or adjacent to the kitchen at small expense?

Storage tanks, which furnish running water throughout the house, are coming into general use. They are inexpensive and easy to install. On any farm where power is used there is no reason why a good water supply may not be provided for the household.

The housewife can plan the arrangement of her kitchen in such a manner as to save her many steps. The kitchen is her work shop, and her husband should see that she is provided with the same conveniences which he demands in his work.

This is the daily task of thousands of women who live on the farms—wasted time and energy—which can be saved by the expenditure of a little time and money.

There are but few who can not afford to substitute a dover egg beater for a fork, a long-handled soup ladle for a cup, a food grinder for a meat chopper. A can opener will save time and labor; sharp knives for carving and slicing are necessities. These are all cheap and add to the efficiency of housework. A bread mixer, a fireless cooker and vacuum cleaner are within the reach of many.

Have a box built for the wood or coal. Put it on castors, fill it near the door and wheel it near the stove. This will prove a great convenience and will keep much dirt out of the kitchen.

The proper arrangement of cooking utensils will lighten the work. Kettles which are used daily should be placed where they can be reached without stooping and without moving other utensils. The potato masher is used at the stove. Hang it on a hook near by. A wire frame for covers near the range will be convenient. A shelf for salt, pepper and matches within reach as the housekeeper works at the stove will save countless steps. The dishpan should be hung near the places for washing dishes. Some housewives insist upon putting them out of sight. In most cases this means many extra steps every time they are needed.

A good paring knife which fits the hand may make the peeling of potatoes a restful rather than a tiresome task. The farmer has a scoop shovel, a spade, a long-handled and a short-handled shovel, because each is adapted to a certain kind of work. It seems unfair that his wife should be compelled to use one poor butcher knife for all processes where knives are needed.

The sink is usually placed with the long side against the wall, but this is not always the best plan. Some modern houses have the sink near the middle of the kitchen so that it may be used from both sides.

Insist upon having a drainboard upon each side of your sink, one for dirty dishes, the other for draining. For the average family this means the saving of time in dish washing.

Grange Behind Nation and President

Those were unmistakable words which Oliver Wilson, master of the national grange delivered in his annual address at St. Louis recently. Here are two or three extracts from that address:

"The history of the grange, from its very inception, is a continuous and unbroken record of devotion to the principles of peace to the championship of justice, fairness and fraternity, and a repeated avowal of its faith in arbitration as a means of settling all differences between individuals and between nations. All its declarations, upon every issue, and every organized act of the grange, have been thoroughly consistent with this fundamental teaching of the order; hence, without prejudice, and with a breadth of vision born of long and consistent action, the grange is now qualified to state its position with the fullest freedom and with the certainty that such a statement of purpose will be as widely listened to, and perhaps fraught with as influential consequences, as was that other Declaration of Purposes, proclaimed and unanimously adopted in this very city more than four decades ago. It is our opinion that the national grange should here and now declare to the world its unqualified consecration to the great world task now facing civilization—of driving forever from existence the greatest world outlaw that history has ever recorded, an empire that has prostituted itself in the worship of brute force, that has hurled to the winds all the ideals of honor, morality and decency, that has stooped to acts of murderous lust and wanton destruction unparalleled in all the annals of human affairs, and that constitutes, until destroyed, a menace to every principle of civilization and even of Christianity itself.

"This is no time for the mincing of words, we may as well face facts as they are, and we must reckon with the full magnitude of the task which we have undertaken. It is the mildest sentence that can be pronounced upon the German empire to assert that we look upon that nation with feeling akin to those with which we might contemplate an insane man running amuck in a peaceful community; but with the same inherent sense of self-preservation no effort will be left undone to check his destructive course and to restore the safety of a threatened community. I, therefore, believe that this national grange in annual session assembled, as the most representative body of tillers of the soil in the country, should put itself squarely and unreservedly on record in support of the American nation, of the American president, of the American soldier and a speedy and thorough finish of the job upon which the United States has entered. To this end let us pledge to that nation, to our president and to those soldiers the utmost limit of our energies—backed by our acres and their productiveness; by our labor and its skill; by all our resources, that those soldiers may be well clothed and fed, and that the awful burden and sacrifice they have been called to make be lightened so far as possible.

"The cost of the present struggle, in treasure and in blood, represents the most frightful price humanity has ever paid to secure an ideal. Thus in the midst of the darkest hour in humanity's history, we catch a glimpse of the dawning of a new day, even the triumph of the very peace towards which grange energies and grange hopes have unceasingly been directed, and to whose complete attainment by the only possible means now available, we here and now highly resolve to rededicate all that we have and all that we are. Thus shall real and lasting world's peace be attained and the opportunities of freedom and liberty be guaranteed to every people."

A Good Tractor to Own

A **MOGUL 10-20** kerosene tractor will go a long way toward solving your labor and expense problems. Men who use this tractor properly say it does as much plowing, disking and harrowing in rush seasons as three men and nine horses. In the heat of the harvest fields, and for summer plowing, three four-horse teams can hardly keep up with it, because it works steadily all day long.

Besides, it is so simple that almost anyone can learn to handle it efficiently. A few days' training in the handling of a kerosene engine is usually all that is needed.

These two features make the **Mogul 10-20** highly desirable. Add to them the fact that it operates on a fuel that you can always buy, and at a reasonable price, and you have a power plant that is hard to beat for all-the-year-round work in the field or at the belt.

You know the standing and reputation of Mogul tractors. When you buy a tractor, don't overlook this good, simple, reliable, economical three-plow **Mogul 10-20.** Booklets and folders give complete information. When you write for them, address

"The Barrier" By REX BEACH

(Continued from page nineteen.)

a reckoning. And he never offered one; on the contrary, he had invariably flown onto a rage when dunned, and exhibited such resentment as to discourage the practice. Now, however, the surly humor of the man began to mellow, and in gradual stages he unloosened, the process being attended by a disproportionate growth of the trader's cash receipts. Cautiously, at first he let out his wit, which was logy from long disuse, and as heavy on its feet as the Jumping Frog of Calaveras, but when they laughed at its labored leaps and sallies his confidence grew. With the regularity of a clock he planted cigars and ordered "a little more hard stuff," while his roving eye rejoiced in lachrymose profusion, its over-burden losing itself in the tangle of his careless beard. By-and-by he wandered through the town, trailed by a troop of tenderfeet, till the women marked him, whereupon he fled back to the post and hugged the bar, for he was a bashful man. When Stark's new place opened it offered him another retreat of which he availed himself for some time. But late in the evening he reappeared at Old Man Gale's store, walking a bit unsteadily, and he mounted the flight of logs to the door he stepped once too often.

"What's become of that fourth step?" he demanded, sharply, of Poleon.

"Dere she is,' said the Frenchman.

"I'm damned if it is. You moved it since I was here."

"I'll have 'im put back," laughed the other.

"Say! It's a grand thing to be rich, ain't it?"

"I don' know, I ain' never try it."

"Well, it is; and now that I've arrived, I'm goin' to change my ways complete. No more extravagance in mine—I'll never lend another cent."

"W'at's dat?" ejaculated Doret, in amazement.

"No more hard-luck stories and 'hurry-ups' for mine. I'm the stony-hearted jailer, I am, from now henceforth, world 'thout end, amen! No busted miners need apply. I've been a good thing, but tonight I turn on the timelock."

"Ba gosh! You're fonny feller," laughed Poleon, who had lent the one-eyed man much money in the past and, like others, regarded him not merely as a bad risk but as a total loss. "Mebbe you t'ink you've been a spen'-t'rif' all dese year."

"I've certainly blowed a lot of money on my friends," Lee acknowledged, "and they're welcome to what they've got so far, but I'm goin' to chop all them prodigal habits and put on the tin vest. I'll run the solderin-iron up my seams so they can't get to me without a can opener. I'm air-tight for life, I am." He fumbled in his pockets and unwrapped a gift cigar, then felt for a match. Poleon tossed one on the bar, and he reached for it twice, missing it each time.

"I guess dose new frien' of yours is mak' you purty full, M'sieu' Tin Vest."

"Nothin' of the sort. I've got a bad dose of indigestion."

"Dat's 'orrible disease! Dere's plaintee riche man die on dat seeckness. You better lie down."

Doret took the hero of the day by the arm and led him to the rear of the store, where he bedded him on a pile of flour sacks, but he had hardly returned to the bar when Lee came veering out of the dimness, making for the light like a ship tacking toward a beacon.

"What kind of flour is that?" he spluttered.

"Dat's just plain w'eat flour."

"Not on your life," said the miner, with the firmness of a great conviction. "It's full of yeast powders. Why, it's r'arin' and risin' like a buckin' hoss. I'm plumb seasick. He laid a zigzag course for the door.

"W'ere you goin'?" asked Poleon.

"I'm goin' to get somethin' for this stomach trouble. It's fierce." He descended into the darkness boldly, and stepped off with confidence—this time too soon. Poleon heard him floundering about, his indignant voice raised irascibly, albeit with a note of triumph.

"Wha'd I tell you? You put it back while I was ashleep." Then, whistling blithely, if somewhat out of tune, he steered for the new saloon to get something for his "stomach trouble."

At Stark's he found a large crowd of the new men, who welcomed him heartily, plying him with countless questions and harking to his maudlin tales of this new country which to him was old. He had followed the muddy river from Crater lake to the delta, searching the bars and creek beds in a tireless quest till he knew each stream and tributary, for he had been one of the hardy band that used to venture forth from Juneau on the spring snows, disappearing into the uncharted valley of the Yukon, to return when the river clogged and grew sluggish, and, like Gale, he had lived these many years ahead of the law, where each man was his own court of appeals and where crime was unknown. He had helped to build camps like Forty Mile and Circle; he knew by heart the bylaws and rules that governed every town and mining district in the country; he knew every man and child by name, but, while many of his friends had prospered, unceasing ill luck had dogged him. Yet he had held to honesty and hard work, measuring a man by his ability to swing an ax or a shovel, and, despite his impecuniosity, regarding theft as the one crime deserving capital punishment.

"Oh, there's lots of countries worse'n this," he declared. "We may not be very han'some to the naked eye, and we may not wear our handk'chiefs in our shirt cuffs, but there ain't no widders and orphans doin' our washin', and a man can walk away from his house, stay a month, and find it there when he comes back."

"Those days are past," said Stark, who had joined in the discussion. "There's too many new people coming in for all of them to be honest."

"They'd better be," said Lee, aggressively. "We ain't got no room for stealers. Why, I had a hand in makin' the by-laws of this camp myself, long with John Gale, and they stip'lates that any person caught robbin' a cache is to be publicly whipped in front of the tradin' post, then, if it's winter time, he's to be turned loose on the ice barefooted, or, if it's summer, he's to be set adrift on a log with his shirt off."

"Either one would mean certain death," said a stranger. "Frost in winter, mosquitoes in summer!"

"That's all right," another bystander declared. "A man's life depends on his grub up here, and I'd be in favor of enforcing that punishment to the letter if we caught any one thieving."

"All the same, I take no chances," said Stark. "There's too many strangers here. Just to show you how I stand, I've put Runnion on guard over my pile of stuff, and I'll be glad when it's under cover. It isn't the severity of punishment that keeps a man from going wrong, it's the certainty of it."

"Well, he'd sure get it, and get it proper in this camp," declared Lee; and at that moment, as if his words had been a challenge, the flaps of the great tent were thrust aside, and Runnion half led, half threw a man into the open space before the bar.

"Let's have a look at you," he panted. "Well, if it ain't a nigger!"

"What's up?" cried tme men, crowding about the prisoner, who crouched, terror-stricken, in the trampled mud and moss, while those playing roulette and "bank" left the tables, followed by the dealers.

"He's a thief," said Runnion, mopping the sweat from his brow. "I caught him after your grub pile, Stark."

"In my cache?"

"Yes. He dropped a crate of hams when I came up on him, and tried to run, but I dropped him." He held his Colt in his right hand, and a trickle of blood from the negro's head showed how he has been felled.

"Why didn't you shoot?" growled Stark, angrily, at which the negro half arose and broke into excited denials of his guilt. Runnion kicked him savagely, and cursed him, while the crowd murmured approval.

"Le' me see him," said Lee, elbowing his way through the others. Fixing his one eye upon the wretch, he spoke impressively.

"You're the first downright thief I ever seen. Was you hungry?"

"No, he's got plenty," answered one of the tenderfeet, who had evidently arrived on the boat with the darky.

REMEMBER!

Increased rate of postage —letters THREE CENTS an ounce. In sending silver coin by mail be sure and ask your postmaster how much postage is required for your letter.

"He's got a bigger outfit than I have."

The prisoner drew himself up against the bar, facing his enemies sullenly.

"Then I reckon it's a divine manifestation," said "No Creek" Lee, tearfully. "This black party is goin' to furnish an example as will elevate the moral tone of our community for a year."

"Let me take him outside," cried Stark, reaching under the bar for a weapon. His eyes were cruel, and he had the angry pallor of a dangerous man. "I'll save you a lot of trouble."

"Why not do it legal?" expostulated Lee. "It's just as certain."

"Yes! Lee is right," echoed the crowd, bent on a Roman holiday.

"What y'all aim to do?" whined the thief.

"We're goin' to try you," announced the one-eyed miner, "and if you're found guilty, as you certainly are goin' to be, you'll be flogged. After which predicament you'll have a nice ride downstream on a sawlog without your laundry."

"But the mosquitoes—"

"Too bad you didn't think of them before. Let's get at this, boys, and have it over with."

In far countries, where men's lives depend upon the safety of their food supply, a side of bacon may mean more than a bag of gold; therefore, protection is a strenuous necessity. And though any one of those present would have gladly fed the negro had he been needy, each of them likewise knew that unless an example were made of him no tent or cabin would be safe. The north being a gameless, forbidding country, has ever been cruel to thieves, and now it was heedless of the black man's growing terror as it set about to try him. A miners' meeting was called on the spot, and a messenger sent hurrying to the post for the book in which was recorded the laws of the men who had made the camp. The crowd was determined that this should be done legally and as prescribed by ancient custom up and down the river. So, to make itself doubly sure, it gave Runnion's evidence a hearing; then, taking lanterns, went down to the big tarpaulin-covered pile beside the river, where it found the crate of hams and the negro's tracks. There was no defense for the culprit and he offered none, being too scared by now to do more than plead. The proceedings were simple and quiet and grim, and were well nigh over when Lieutenant Burrell walked into the tent saloon. He had been in his quarters all day, fighting a fight with himself, and in the late evening, rebelling against his cramped conditions and the war with his conscience, he had sallied out, and, drawn by the crowd in Stark's place, had entered.

A man replied to his whispered question, giving him the story, for the meeting was under Lee's domination, and the miners maintained an orderly and businesslike procedure. The chairman's indigestion had vanished with his sudden assumption of responsibility, and he showed no trace of drink in his bearing. Beneath a lamp one was binding four-foot lengths of cotton tentrope to a broomstick for a knout, while others, whom Lee had appointed, were drawing lots to see upon whom would devolve the unpleasant duty of flogging the captive. The matter of fact, relentless expedition of the affair shocked Burrell inexpressibly and seeing Poleon and Gale nearby, he edged toward them, thinking that they surely could not be in sympathy with this barbarous procedure.

"You don't understand, Lieutenant," said Gale, in a low voice. "This nigger is a thief!"

"You can't kill a man for stealing a few hams."

"It ain't so much what he stole; it's the idea, and it's the custom of the country."

"Whipping is enough, without the other."

"Dis stealin' she's bad biznesse," declared Poleon. "Mebbe dose ham is save some poor feller's life."

"It's mob law," said the Lieutenant, indignantly, "and I won't stand for it."

Gale turned a look of curiosity upon the officer. "How are you going to help yourself?' said he; but the young man did not wait to reply. Quickly he elbowed his way toward the center of the scene with that air of authority and determination before which a crowd melts and men stand aside. Gale whispered to his companion:

"Keep your eye open, lad. There's going to be trouble.' They stood on tiptoe, and watched eagerly.

"Gentlemen," announced Burrell, standing near the ashen-gray wretch, and facing the tentful of men, "this man is a thief, but you can't kill him!"

Stark leaned across the bar, his eyes blazing, and touched the Lieutenant on the shoulder.

"Do you mean to take a hand in all of my affairs?"

"This isn't your affair; it's mine," said the officer. "This is what I was sent here for, and it's my particular business. You seem to have overlooked that important fact."

"He stole my stuff, and he'll take his medicine."

"I say he won't!"

For the second time in their brief acquaintance these two men looked fair into each other's eyes. Few men had dared to look to Stark thus and live; for when a man has once shed the blood of his fellow, a mania obsesses him, a disease obtains that is incurable. There is an excitation of every sense when a hunter stands up before big game; it causes a thrill and flutter of undiscovered nerves, which nothing else can conjure up, and which once lived leaves an incessant hunger. But the biggest game of all is man, and the fiercest sensation is hate. Stark had been a killer, and his brain had been seared with the flame till the scar was ineradicable. He had lived those lurid seconds when a man gambles his life against his enemy's, and, having felt the great sensation, it could never die; yet with it all he was a cautious man, given more to brooding on his injuries and building up a quarrel than to reckless paroxysms of passion, and experience had taught him the value of a well-handled temper as well as the wisdom of knowing when to use it and put it in action. He knew intuitively that his hour with Burrell had not yet come.

The two men battled with their eyes for an opening. Lee and the others mastered their surprise at the interruption, and then began to babble until Burrell turned from the gambler and threw up his arm for silence.

"There's no use arguing," he told the mob. "You can't do it. I'll hold him till the next boat comes, then I'll send him down-river to St. Michael's."

He laid his hand upon the negro and made for the door, with face set and eyes watchful and alert, knowing that a hair's weight might shift the balance and cause these men to rive him like wolves.

Lee's indignation at this miscarriage of justice had him so by the throat as to strangle expostulation for a moment, till he saw the soldier actually bearing off his quarry. Then he broke into a flood of investive.

"Stop that!" he bellowed. "To hell with your law—we're goin' accordin' to our own." An ominous echo arose, and in the midst of it the miner, in his blind fury forgetting his exalted position, took a step too near the edge of the bar, and fell off into the body of the meeting. With him fell the dignity of the assemblage. Some one laughed; another took it up; the nervous tension broke, and a man cried:

"The soldier is right. You can't blame a dinge for stealing," and another: "Sure! Hogs and chickens are legitimate prey."

Lee was helped back to his stand, and called for order; but the crowd poked fun at him, and began moving about restlessly till some one shouted a motion to adjourn, and there arose a chorus of seconders. A few dissenting voices opposed them, but in the meantime Burrell was gone, and with him the cause of the tumult; so the meeting broke up of its own weight a moment later.

As Poleon and Gale walked home, the Frenchman said, "Dat was nervy t'ing to do."

The trader made no answer, and the other continued, "Stark is goin' for kill 'im, sure."

"It's a cinch," agreed Gale, "unless somebody gets Stark first."

When they were come to his door the trader paused and, looking back over the glowing tents and up at the star-sprinkled heavens, remarked, as if concluding some train of thought, "If that boy has got the nerve to take a nigger thief out of a miners' meeting and hold him against this whole town, he would not hesitate much at taking a white man, would he?"

"Wal," hesitated the other, "mebbe dat would depen' on de crime."

"Suppose it was—murder?"

"Ha! We ain't got no men lak' dat in Flambeau."

They said goodnight and the old man entered his house to find Alluna waiting for him, a look of worry on her stolid face.

"What's wrong?" he inquired.

"All night Necia has been weeping."

"Is she sick?" He started for the girl's door but Alluna stopped him.

"No! It is not that kind of weeping; this comes from the heart. It is there she is sick. I went to her, but she grew angry, and said I had a black skin and could not understand; then she went outdoors and has not returned."

Gale sat down dejectedly. "Yes, she is sick in her heart, all right, and so am I, Alluna. When did she go out?"

"An hour ago."

"Where is she?"

"Out by the river bank—I followed

her in the shadows. It is best for her to stay there till she is calm."

"I know what ails her," said the father. "She's found that she's not like other girls. She's found that a white soul doesn't count with white people; they never go below the skin." Then he told her of the scene that morning in the store, adding that he believed she loved Lieutenant Burrell.

"Did she say so?"

"No, she denied it, now that she knows she hasn't got his kind of blood in her."

"Blood makes no difference," said the woman, stubbornly. "If he loves her he will take her; if he does not—that is all."

Gale looked up at her, and was about to explain, when the utter impossibility of her comprehending him made him desist, and he fell moody again. At last he said, "I've got to tell her, Alluna."

"No, no!" cried the woman, aghast. "Don't tell her the truth! Nothing could be worse than that!"

But he continued, deliberately: "Love is the biggest thing in the world; it's the only thing worth while, and she has got to have a fair show at it. This has been on my mind for weeks, and I've put it away, hoping I wouldn't have to do it; but today I came face to face with it again, and it's up to me. She'll have to know some time, so the sooner the better."

"She would not believe you," said the woman, at which he started.

"I never thought of that. I wonder if she would doubt! I couldn't stand that."

"There is no proof, and it would mean your life. A good man's life is a great price to pay for the happiness of one girl—"

"I gave it once before," said Gale, a trifle bitterly, "and now that the game is started, I've got to play the string out; but—I wonder if she would doubt—" He paused for a long moment. "Well, I'll have to risk it. However, I've got a lot of things to do first—you and the youngsters must be taken care of."

"And Stark?" said Alluna.

"Yes, and Stark."

Burrell took his prisoner to the barracks, where he placed him under guard, giving instructions to hold him at any cost, not knowing what wild and reckless humor the new citizens of Flambeau might develop during the night, for it is men who have always lived with the halter of the law tight upon their necks who run wildest when it is removed. Men grown old on the frontier adhere more closely to a rigid code than to tenderfeet who feel for the first time the liberty and license of utter unrestraint, and it was these strangers whom the soldier feared rather than men like Gale and "No Creek" Lee, who would recognize the mercy of his intervention and let the matter drop.

After he had taken every precaution he went out into the night again, and fought with himself as he had fought all that day and all the night before; in fact, ever since old Thomas had come to him after leaving Necia, and had so cunningly shaped his talk that Burrell never suspected his object until he perceived his position in such a clear light that the young man looked back upon his work with startled eyes. The Corporal had spoken garrulously of his officer's family; of their pride, and of their love for his profession; had dwelt enthusiastically upon the Lieutenant's future and the length he was sure to go, and finally drifted into the same story he had told Necia. Burrell at last sensed the meaning of the crafty old soldier's strategy and dismissed him, but not before his work had been accomplished. If a coarse-fibered, calloused old campaigner like Corporal Thomas could recognize the impossibility of a union between Necia and himself, then the young man must have been blind indeed not to have seen it for himself. The Kentuckian was a man of strong and virile passions, but he was also well balanced, and had ever followed his head rather than his heart, holding, as he did, deep-seated contempt for weak men who laid their course otherwise. The generations of discipline back of him spoke to his conscience. He had allowed himself to become attached to this girl until—yes, he knew now he loved her. If only he had not awakened her and himself with that first hot kiss; if only—But there was no going back now, no use for regrets, only the greater necessity of mapping out a course that would cause her least unhappiness. If he could have run away he would have done so gladly, but he was bound here to this camp, with no possibility of avoiding her.

When he drove his reason with firm hands he saw but one course to follow; but when his mind went slack for a moment the old desire to have her returned more strongly than ever and he heard voices arguing, pleading, persuading—she was the equal of any woman in the world, they said, in mind, in purity and in innocence. He hated himself for hesitating; he railed at his own indecision; and then, when he had justified his love and persuaded himself that he was right in seeking this union there would rise again the picture of his people, their chagrin and what would result from such a marriage. He knew how they would take it; he knew what his friends would say, and how he would be treated as the husband of a half-breed Indian; for in his country one drop of colored blood made a negro, and his people saw but little difference between the red and the black. It would mean his social ostracism; he would be shunned by his brother officers, and his career would be at an end. He swore aloud in the darkness that this was too great a price to pay for love, that he owed it to himself and to his dear ones at home to give up this dark-eyed maid who had bewitched him.

He had wandered far during this debate, clear past the town, and out through the Indian village; but now that he believed he had come to an understanding with himself he turned back toward his quarters. He knew it would be hard to give her up; but he had irrevocably decided, and his path began to unfold itself so clear and straight that he marvelled how he could have failed to see it. He was glad he had conquered, although the pain was still sharp. He felt a better man for it, and, wrapped in this complacent optimism he passed close by the front of the trader's store, where Necia had crept to be alone with her misery.

The high moon cast a deep, wide shadow upon the store steps where the girl sat huddled, staring out into the unreal world, waiting for the night wind to blow away the fears and forebodings that would not let her sleep. It was late, and the hush of a summer midnight lay upon the distant hills. Burrell had almost passed her when he was startled by the sound of his name breathed softly; then, to his amazement, he saw her come forth like a spirit into the silver sheen.

"Necia!" he cried, "what are you doing here at this hour?" She looked up at him sadly; he saw that her cheeks were wet and something inside him snapped and broke. Without a word he took her in his arms, meeting her lips in a long kiss, while she, trembling with the joy of his strong embrace, drew closer and closer and rested her body wearily against his.

"Little girl! little girl!" he whispered over and over, his tone conveying every shade of sympathy, love and understanding she had craved. He knew what had made her sad, and she knew that he knew. There was no need for words; the anguish of this long day had whetted the edge of their desire, and they were too deeply, too utterly lost in the ecstacy of meeting to care for speech.

As she lay cradled in his arms, which alternately held her with the soft tenderness of a mother and crushed her with the firce ardor of a lover, she lost herself in the bliss of a woman's surrender and forgot all her terrifying doubts and fears. What were questions of breed of birth or color now, when she knew he loved her? Mere vapors that vanished with the first flutter of warm wings.

Nor did Meade Burrell recall his recent self-conquest or pause to reason why he should not love this little wisp of the wilderness. The barriers he had built went down in the sight and touch of his love and disappeared; his hesitation and infirmity seemed childish now—yes, more than that, cowardly. He realized all in a moment that he had been supremely selfish, that his love was a covenant, a compact, which he had entered into with her and had no right to dissolve without her consent, and, strangely enough, now that he acknowledged the bond to himself, it became very sweet and satisfying.

"Your lips cling so that I can't get free," sighed the girl, at last.

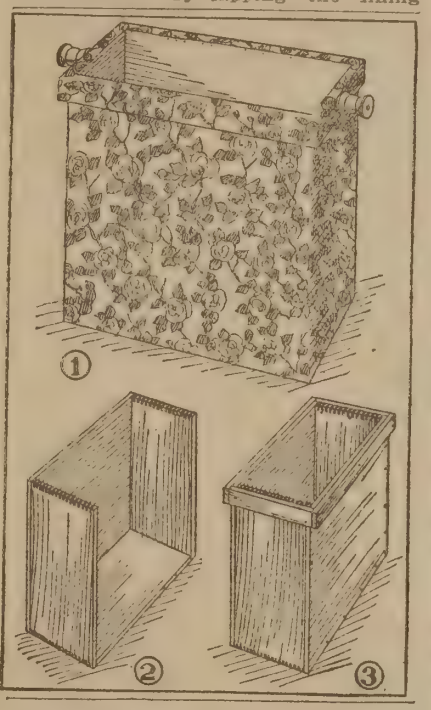
"You never shall," he whispered. But when she smiled up at him piteously, her eyes swimming, and said, "I must," he wrenched himself away and let her go.

As he went lightly toward the barracks through the far-stretching shadows, for the moon was yellow now, Meade Burrell sighed gladly to himself. Again his course ran clear and straight before him, though wholly at variance with the one he had decided upon so recently. But he knew that his vision was obscured and that the moon madness was upon him.

(To Be Continued.)

Wheat Through Soo Canal.

During October there passed through the Soo canal 34,715,000 bushels of wheat, against 18,445,000 a year ago. Canadian shipments made the large total.

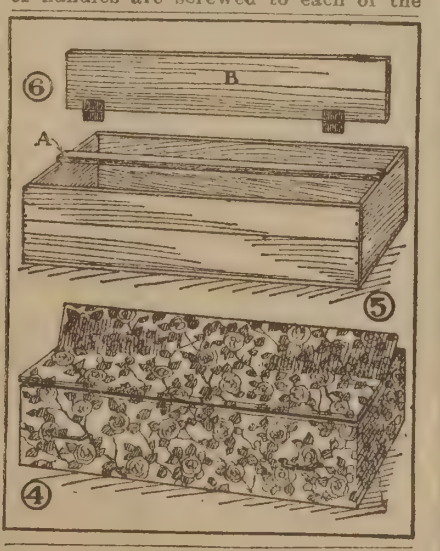


Handicraft For Girls

By Dorothy Perkins.

On account of the simplicity of the construction of cretonne covered furniture, there are all sorts of things which a girl can make for her own room, and for mother's. The work does not require the skill of a mechanic because almost every imperfection in the woodwork will be concealed by the cretone. Also because of the covering, it is possible to use boxes, and since such a variety of shapes and sizes are to be had, many articles can be assembled without altering the boxes in any way. Father or brother can be asked to help with any of the carpentry which you do not feel equal to.

Waste Basket.

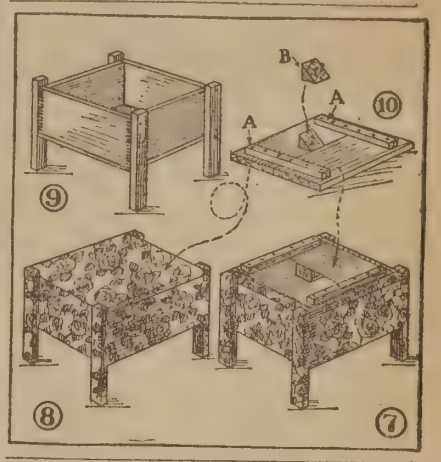


The waste basket in Fig. 1 is made out of a soap box.. Remove one end of the box, as shown in Fig. 2, for the open top of the basket, and nail the cover board in place to enclose the side (Fig. 3). The next step is to cut several strips about an inch and one-half wide, and nail them around the top edges as a finishing band. Tack the outside cretonne on first, then the inside lining. Lap the cretonne over the top edge, and cut it so that about an inch will turn down all around. Then conceal the edge of the cretonne by lapping the lining

over it. The lining may be of a plain colored cambric. The spool on each end forms a handle.

Shirtwaist Box.

The shirtwaist box shown in Fig. 4 is made of a box of the right height to slide underneath a bed, and a pair of handles are screwed to each of the



two long sides, so it may be pulled out from either side of the bed. Castors on the bottom make it push under the bed easily, and the double-hinged cover arrangement makes it possible to pull out the box halfway and open it.

Because the shirtwaist box must be shallow, it is well to make it long. Having procured the box, it is only necessary to fasten a strip two inches wide along the center of the open top, from end to end, for the hinge-strip A (Fig. 5), and hinge a board each side of it for the covers (B, Fig. 6). That completes the carpentry. It will be easiest to cover the box before the hinge-strip and covers have been put on, and to tack the cretonne on the hinge-strip and covers before fastening them in place.. The handles and the castors go on last.

Shoe Blacking Case.

Have you a shoe blacking case in your room? Very few girls do own one, yet it is an article of great importance to the girl who is particular

about keeping her shoes tidy. Fig. 7 shows a practical little blacking case. By making the top removable, the inside of the case may be used as a receptable for cans and bottles of polish, brushes and rags; and by padding the under side and covering it with cretonne, the top may be inverted after use, and the blacking case thus converted into the attractive footstool shown in Fig. 8.

Fig. 9 shows how four short legs should be nailed to the corners of a square soap box, with the tops projecting just enough to allow for the thickness of the cover, and Fig. 10 shows how the cover boards should be fastened together with the cross strips A, and how a triangular block B should be nailed to it for a rest to push the shoe against.

In covering the blacking case, it is best to omit the inside lining.

Remove Stains by Sponging.

Sponging is applicable to all fabrics, but especially to delicate materials or colors which ordinary laundering might injure in removing stains, says the bulletin issued by the United States department of agriculture, on the "Removal of Stains From Clothing and Other Textiles, Spread the stained article on a flat surface in a good light, and beneath the stain put a cloth folded into several thicknesses, or clean white blotting paper, to absorb the superfluous liquid. Change the pad for a fresh one as soon as it becomes soiled. Sponge with a clean, soft, lintless cloth (preferably of the same material as that stained) and renew it as frequently as may be necessary. Lay the stained material with the wrong side up and apply the water to the back, so that the foreign substances can be washed from the fibers onto the pad without having to pass through the material.

THE ORIGINAL CHEMICAL
Indoor Closet
30,000 SOLD—FIFTH YEAR
More Comfortable, Healthful, Convenient
Eliminates the out-house, open vault and cess-pool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

ABSOLUTELY ODORLESS
Put It Anywhere In The House
The germs are killed by a chemical process in water in the container. Empty once a month. No more trouble to empty than ashes. Closet absolutely guaranteed. Guarantee on file in the office of this publication. Ask for catalog and price

Avoid Mistakes

Profit by Experience of Others

By Alice W. Barland.

Dear Friends of the Family Circle: I have often remarked that one should live out a lifetime or two just to learn how. When I think over my own mistakes concerniug my own career, if just plain humdrum day by day life can be called a career, I feel moved to write to my young people and all readers of our paper what is in my mind.

To the young folk I would say as a first principle, strive to become good listeners and keen observers. Why is it I wonder we none of us profit very much by the experience of those who have gone before. I am reminded as I write how many times we used to allow our vegetables to remain out in the field, when we could as well as not have stored them in the cellar before frost came to injure them. In the state where I lived we nearly always had a good hard frost about September 15 and yet we would let the squashes and tomatoes stay in the field till warned by a sudden turn in the weather and we knew we must get them in or lose them and all hands would be called upon and rush around in one grand commotion.

Rushing to get the storm windows up is another habit. It would be much more comfortable to have them washed some nice warm day in the late fall and quietly and calmly put them up, for we always know the cold weather is sure to arrive.

Most of us women have had the unpleasant experience of having some pretty gingham or other wash goods shrink so it was practically useless or at least uncomfortable and we have vowed we would never again make up cotton goods without first shrinking it. Then we get careless and do the same thing over again. I remember so well the advice my father used to give me when I first began as a little girl to do housework. It was something like this: "Always start in plenty of time to get your meals. It takes just so long to boil your potatoes every time. You always have to have hot water to make them cook so put your kettle on first." This was just a plain simple way of saying that it is best to "get ready before we commence."

I am sure we could all get very much useful knowledge by observing the mistakes of others and avoiding those mistakes. I heard of a man who was sent to the legislature in his state term after term. He was once complimented by one of his associates on his habit of always voting the right way on bills as they came before the house. The member replied that he deserved no praise whatever because of his votes since he had a method which worked out fine. He said the member who occupied the seat just ahead of him was about the most contemptible person he had ever known and so he always watched how this man voted and then voted just opposite and thereby got on to the right side of most bills that came before the house.

I took this story with limitations as to truth, but there is a lesson in it for us. If we would hold ourselves at "attention" when people worth listening to speak, if we would study the methods of successful people and not be so rooted and grounded in our own ways we might avoid making many mistakes.

I am convinced that we do not take sufficient time for reflection. I happen to have a young niece who is a rather uncommonly "level-headed" young person. Many times I have found her sitting by herself and have said, "What are you doing?" Her answer is always the same, "Just thinking things out." If more of us would take time to "think things out" many less mistakes would be recorded against us. It is foolish and worse than idle to sit down and repine over mistakes made, that is not what I mean. Having made a mistake the thing to do is to remember it only long enough to be sufficiently impressed so as to avoid making the same mistake again.

We are living in sober, serious times. We do not know what will befall from day to day. The wisest men in the country are studying the great problems which confront the nations and giving us the very best advice they can arrive at. Let us "stand at attention" like good soldiers, let us heed the warnings, not thrusting forward our little petty opinions and stubbornly following our own desires. When we are told to conserve food let us do it; when to save on flour, sugar and fats of all kinds, let's do it. There is nothing to wait for now since our own dear American boys are in the trenches. It is right down now to where we save that our own may be fed.

A Few Good Recipes

By Ruth Gipson Plowhead.

Our family is more than satisfied to follow out the meatless day and the wheatless day. They promise not to mutiny at anything set before them, as long as they are not asked to observe "eatless day."

Split peas, lentils, beans and macaroni and cheese form some of our meatless day standbys, and a number have asked about cooking these. Split peas and lentils may be cooked practically the same as dry beans. We soak them over night and boil them until noon. Sometimes a slice of bacon and salt form the sole seasoning, but they are usually liked better if to this a half cup of tomato pulp and a grated onion are added. Split pea soup is made by running the cooked peas through a sieve and adding two cups of milk to each cup of the pea pulp, seasoning with salt, pepper and butter to taste. The ordinary potato soup is improved and made more nourishing by adding a cupful of mashed split peas.

A Splendid Squash Pie.

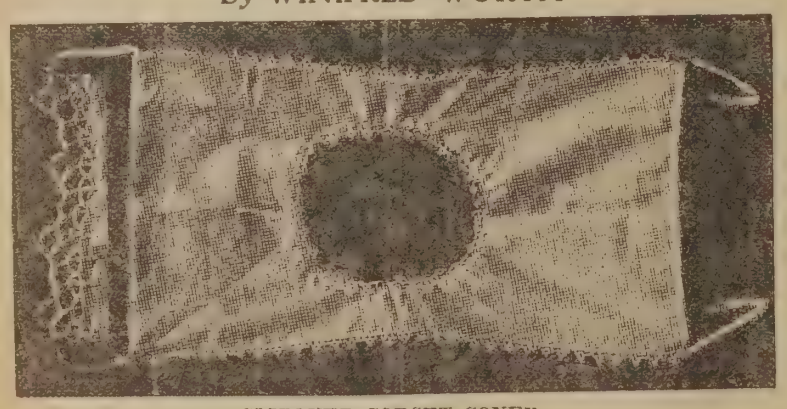
We think a thick, brown squash pie is hard to beat, and the following is a pie which most people think especially good. The pie is not exactly a "war time" pie, but contains enough nourishment to be of real food value, and may supplement a lighter meal. Line a very deep pie pan with rather thin crust. For the filling use:

One heaping cup of squash cooked dry.
Three-fourths cup of sugar.
One tablespoonful dark molasses.
One tablespoonful caramel (to give a darker color to pie).
One teaspoonful of cinnamon, nutmeg and ginger.
One-half teaspoonful salt.
One and one-half cupfuls milk.
Two well beaten eggs.
One tablespoonful melted butter.

Bake slowly until a rich brown. This recipe makes one large pie.

Economical Fruit Cake.

A fruit cake which is good and not too rich and extravagant to use oftener than special holidays is made by substituting dried apples and prunes for some of the more expensive fruits.



Cream 1½ cups of sugar with ½ cup of lard and ½ cup of butter. Add 1 cup sour milk, 4 eggs, 5 cups flour and 1 teaspoonful baking-powder. Fruit as follows: One box raisins, 1 cup dried prunes cut in small pieces and 2 cups of dried apples prepared as follows: Soak the dried apples in water over night, then drain, chop fine and boil two hours in 1½ cups of dark molasses, 1 teaspoonful soda dissolved in ⅛ cup of water, 1 teaspoonful vanilla and 1 teaspoonful each of nutmeg, cinnamon, cloves and grated lemon rind, ¼ pound of citron and 1 or 2 cups of nut meats are a good, but not a necessary, addition.

Most Powerful of Snakes.

One of the most difficult reptiles to capture is the regal python, a native of India, that giant snake that measures as long as 30 feet in extreme cases. This immense constrictor had in its wonderful coils the strength to crush an ox. A 10-foot python could shoot its head forward, strike a bag man in the chest, fell him and crush him bone from bone—and the pythons caught by the snake man are twice and sometimes three times as long.

Crochet and Tatting Designs

By WINIFRED WORTH

SLIPOVER CORSET COVER.

Here is a new idea in a corset cover which is becoming very popular.

Use one-half yard of lingerie batiste, or sheer lawn, 36 inches wide.

Cut circle for neck, 12 inches in diameter. Hem neck and sides, turn up ½-inch hem at both ends for ribbon drawstrings. It is a good idea to have your cloth in front a little wider than in back, and shape in toward neck.

The folowing details are for the crochet work used on this model (see enlarged picture at bottom of cut).

For edge on sides of corset cover: Ch. 7, skip space, 1 dc. in material. Ch. 7, 1 dc. in material, and repeat to end. Turn.

Nine dc. in first ch. of 7, 9 dc. in next, 4 dc. in next, ch. 9. Take out hook, put in 5 dc. of second shell. Draw ch. through 7 dc. 1 p. 7 dc. on ch. of 9. Five dc. in ch. of 7 of first row. This completes one point. Repeat until you have the desired number of points to complete each side.

For edge in neck: Five ch. all around neck, 2 rows of lacet to form beading as shown in enlarged illustration. Finish with edge, same as described for side trimming.

You might even add to the beauty of this corset cover by embroidering a dainty design on the front.

Still another suggestion for this cover is to use crepe de chine material and do the crochet work with silk thread.

A Match-Lighting Gasoline Lamp!

Here it is—a match-lighting gasoline lamp! No torch needed. Lights with matches like the old time oil lamp—but makes and burns its own gas from common gasoline, giving a remarkably brilliant, steady, white light of

300 CANDLE POWER

more than 20 oil lamps. Far brighter than the brightest electric light and costs less than one-third of a cent per hour. Thirty times cheaper than electricity. Safer than the safest oil lamp. Cheaper than the cheapest candles.

Guaranteed Five Years
Will Last a Lifetime

The Coleman Quick-Lite

Safest lamp in the world—Absolutely no danger of fire or explosion. Fuel can't spill—no danger if tipped over. No wicks to trim—No globes to wash. No dirt, grease, smoke or soot.

The Quick-Lite Lantern

—fit companion to the Quick-Lite Lamp. Storm-proof, wind-proof, bug-proof. Absolutely safe. Can't explode. Roll it over in straw—no danger. Most powerful and most convenient light for farm or home use known. Ask your dealer about it.

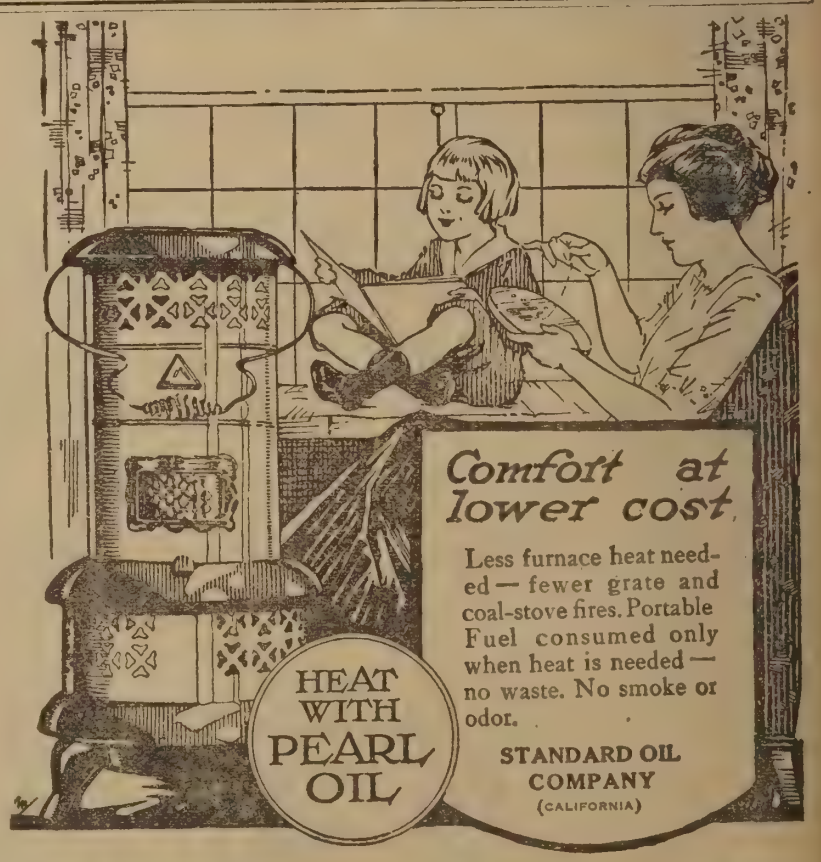
Get the Genuine

Success invites imitations. Be careful, therefore to get the genuine Coleman Quick-Lite Lamps and Lanterns. If your dealer can't supply you write us direct, addressing nearest office for Catalog No. 69.

COLEMAN LAMP CO.
ST. PAUL, WICHITA, TOLEDO, DALLAS, CHICAGO.

IWAN POST HOLE AUGER

has sharp blades of the best steel. Fastest of all augers. For post holes and wells. Sizes 3 to 16 inches; 8 inch $2.25, freight extra.



Write for booklet about Iwan post hole diggers, sickle edge hay knives ($1.75 prepaid P.P. if dealer will not sell you), ditching spades, drain cleaners, tile hooks, chimney tops, etc.

Comfort at lower cost

Less furnace heat needed—fewer grate and coal-stove fires. Portable Fuel consumed only when heat is needed—no waste. No smoke or odor.

STANDARD OIL COMPANY
(CALIFORNIA)

PERFECTION OIL HEATER

Patterns

1946—Girls' gymnasium suit. Cut in five sizes: 8, 10, 12, 14 and 16 years. It requires 3 3-4 yards of 27-inch material for the blouse and 3 3-8 yards for the bloomers, for a 12-year size. Price, 10 cents.

1964—Girls' one-piece dress. Cut in four sizes: 8, 10, 12 and 14 years. It requires 4 yards of 44-inch material for a 12-year size. Price, 10 cents.

2008-2010—A smart and serviceable dress. Waist 2008 and skirt 2010 are both cut in three sizes: 16, 18 and 20 years. It will require 6 3-4 yards of 36-inch material to make skirt and waist of one material in a 16-year size. Two separate patterns, 10 cents for each pattern.

2035-2020—Ladies' costume. Waist 2035, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2020, cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. The skirt measures about 3 1-3 yards at the foot, and will require 4 yards of 44-inch material for a 24-inch size. The waist requires 2 1-2 yards of 44-inch material for a 36-inch size. Two separate patterns, 10 cents for each pattern.

2132—Ladies' "cover all" apron. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. It requires 4 7-8 yards of 36-inch material for a medium size. Price, 10 cents.

2135-2131—Ladies' costume. Waist 2135, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure, and requires 2 7-8 yards of 44-inch material for a 38-inch size. Skirt 2131, cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 5 yards of 44-inch material for a 24-inch size, and measures 3 yards at the foot with plaits drawn out. Two separate patterns, 10 cents for each pattern.

2265—Girls' dress. Cut in four sizes: 2, 3, 4 and 5 years. Size 4 requires 2 3-4 yards of 36-inch material. Price 10 cents.

2266-2267—A good business dress. Waist 2266, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 3 1-8 yards of 36-inch material. The skirt pattern, 2267, is cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure, and will require 3 1-8 yards of 44-inch material for a 24-inch size. It measures 2 3-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2274—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 requires 3 1-2 yards of 44-inch material. Price, 10 cents.

2281—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 1-2 yards of 44-inch material. The skirt portions measure about 2 3-8 yards at the foot. Price, 10 cents.

2287—Child's night drawers. Cut in five sizes: 4, 6, 8, 10 and 12 years. It requires 3 yards of 36-inch material for a 6-year size. Price, 10 cents.

2298—A pleasing set of nursery toys. The patterns are cut in one size only. It will require 1 yard of brown flannel for the monkey and half yard of red flannel for his suit. The elephant requires 1 yard. The rabbit half yard. Price, 10 cents.

Where Miss Addams Is Right.

Were it not irreverent we would call Miss Jane Addams "a good sport." Miss Addams' views on war are well known, and we entirely disagree with them. But instead of sitting down with them in silent resentment in Hull House Miss Addams is going about the country speaking to women in favor of Hoover's plan of food conservation. Again she is an example to the rest of us.—Chicago Post.

WHAT TO SEEK
WHAT TO AVOID
IN BAKING POWDER

Send 4 cents in stamps TODAY for the NEW Crescent Cook Book which INTERESTINGLY DISCUSSES baking powders and baking powder ingredients. A entertaining, highly instructive piece of work. NOTHING ELSE like it. And the RECIPES it contains ARE SIMPLY GREAT. SEND for it today. Also CALL at YOUR grocers for can of the powder. It costs ONLY HALF as much as some baking powders, but SURPASSES any baking powder produced for raising dough or batter—having 20 to 25 per cent more leavening power. It's ABSOLUTELY PURE—wholesome—good. 25c a pound. Buy a can and send for the cook book TODAY. Dept. S., Crescent Mfg. Co., Seattle, Wash (B-56.)

Western Electric
Farm Light and Power Plant

Make This Christmas Brighter

and throughout the new year enjoy all the comforts and benefits of a Western Electric Farm Light and Power Plant. Thousands of installations are furnishing brilliant, safe light and providing power to do many farm chores.

The plant is so simple that anybody can run it. There are four units: the generator, which makes the electricity; the batteries, which store it up for use when the generator is not being run; the switchboard, which regulates the plant and lights; and the engine, which supplies the initial power for running the generator. If you already have an engine (gasoline or kerosene) you can use it to operate this plant.

The plant combines every possible feature that anyone could wish for. 40 years' experience in manufacturing electrical material makes the Western Electric Company well fitted to produce and guarantee an electric light and power plant. Whatever your requirements, we have just the type and size of plant suitable to your needs.

Make your whole outfit a Western Electric—the plant itself, the lamps, motors, pump, cream separator, washing machine, vacuum cleaner, electric iron—in fact, everything electrical for the farm and the home.

To get full facts at once, mail coupon to our nearest house.

Limited amount of territory open to agents with satisfactory references.

Boy Question

Depends a Good Deal on Farmer

More letters have been received from Washington with reference to an inquiry as to the part women and young folks are taking in supplying the shortage of farm labor, as well as the greater use of machinery on the farms:

J. C. BUSH, Chehalis: The past season has been a trying one with many farmers in this community because of the shortage of labor, but the weather was so favorable during haying and in fact all fall that a great deal more work has been done by the farmers than would have been possible in many seasons. In the early spring when everybody was talking about the shortness of farm labor there was considerable effort made in the towns to get town people to go out and help during the rush season on the farms, but not much help was secured in this way. The fact is the average business or professional man would not be worth much on a farm without some seasoning. School boys, especially those who were country raised, have proven the most satisfactory extra help that could be obtained. I had one farmer boy of 18 whom I considered the superior of nine out of 10 farm hands. He knew how, he was on the job early and did not complain if the work occasionally kept him late, he was aggressive and worked his brains as well as his hands, he went after results. Of course, this boy will not be a hired man long. He saves his money and next year I believe goes to Pullman. Would there were many more like him. I think the boy question depends a good deal on the farmer. If the latter knows how to handle boys he can get a great deal of work out of them. The secret is to get their interest and hold it. Of course, you must first find the boy, which is not always easy to do in these times. Women have not worked very extensively on farms in this section, although there have been some, and I know of a furniture factory which is using a lot of girls this winter at jobs formerly held by old men and boys. One farmer's wife was fortunate enough to secure a perfect treasure of a girl from a neighboring family, who liked to do housework. She not only cooked the meals and did the washing and ordinary housework just as though the place were her own, but she hunted up socks to darn and patching to do. With such help in the kitchen the farmer's wife went out into the field and was of much help to her husband, who was unable to secure needed assistance. She could drive the team to the disk, or the roller or the haying machinery or walk part of a day behind a drag harrow as well as any man. She could drive up and stable the cows and help milk or work in the garden and the temporary change in occupation was a great pleasure to her as well as a great relief to the better half, who could not find hours enough in a day to plant his crops or harvest them. Most women, however, are not so fortunate with their kitchen help, as a majority of the girls who work out like to get to town and shun a job in the country even when the wages are tempting. In this community there are no big farms or orchards like those of eastern Washington and the farmers, by standing together and helping each other, have been able to get through in some way. The larger farms are rapidly coming to the use of gas tractors. As long as the farmer can handle this class of machinery himself or has thoroughly dependable help he is all right, but when he must depend on "expert" assistance it might sometimes be better to have the reliable old team back on the job.

ROY G. ADAMS, Fairfield: There have been two conditions here this harvest and fall to help in the labor problem. The first was the very light crop of all spring sown crops and the second has been the unusually dry fall, which has prevented the farmers from doing any fall plowing. So it hasn't been necessary for the women to do any outdoor work out of the ordinary season's work.

JACOB HARDER, Ritzville: Women and young folks have to do the chores since labor got so scarce that we can not get anybody and the farmer himself simply has to work double shift. Women are not adapted to farm labor out in the field. There are few exceptions. My experience with labor for the last 30 years shows that they are getting every year a little more careless and where this will end is hard to say. Our younger generation are talking nothing but machinery, and I hold that armstrong labor is hard to beat.

L. F. DAVIS, Rainier: Many of the farmers here are in the dairy business and are shipping milk to the condenser.

The Pet Canary Sings.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. Is any one my twin? I have a light complexion, blue eyes and light hair. I am five feet two inches tall. I am 13 years old and in the eighth grade. I have one sister and two brothers. My sister's name is Anna, my oldest brother's name is Marius and my youngest brother's name is Rendit. We have nine cows and three horses and seven calves, three pigs, about 150 chickens, four cats and one dog. Our horse names are Flora, Queen, and our pony's name is Fred. My teacher's name is Mr. Albers. He has to go to the training camp, but I do not know when. I go to a country school, which is two miles off. There are 10 pupils in our class. We have two rooms in our school. Miss Zweegeman teaches the first four grades. We have a little pet canary. It sometimes sings a little, because it is quite young. We live four miles from town. I hope to see my letter in print soon and that some of the cousins will soon write to me.—Garetta Adriana De Boer, R. F. D. 1, Box 79, Lynden, Wash.

Play Ball in the Gymnasium.

Dear Aunt Nellie: This is my second letter to the Children's Corner. I enjoy reading the letters. Some are very interesting. I am 12 years old. I will be 13 years old the 21st of December. Have I a twin? I have to walk nearly two miles to school. Sometimes when it is raining I ride. We have a new gymnasium at our school. It is 75 feet by 40 feet. We have lots of fun playing basket ball in it. I am in the girls' basket ball team. My brothers have four little puppies. One of them is white and the rest are black and white. They are just getting playful and are very cute. I have lots of fun playing with them. My father has a new Dodge machine. I have lots of fun learning to run it. I would like to have some of the cousins write to me. I will close for this time and will write again soon.—Clara Lybeck, Box 6, R. F. D. 2, Kent, Wash.

Girls Should Help Win the War.

Dear Aunt Nellie: I am going to write about our Red Cross society. The girls of our school make candles, slippers, face cloths and anything we can. We are also going to make a quilt. I think if all the girls of the United States will help the Red Cross they will be helping to win the war. We can do Red Cross work instead of crocheting and tatting. I am going to learn how to knit soon. Our school is trying to raise $30 for the Y. M. C. A., which is about the same as the Red Cross. I had a sewing machine, which I loaned to the Red Cross society. All of us must do lots of Red Cross work, because it will soon be winter and the soldiers will need things. I read the president's letter which was in one of the papers, and I thought it was good. I am 14 years old and in the eighth grade.—Nellie Smith, Box 46, Albion, Wash.

Feed Our Allies This Winter.

Dear Aunt Nellie: This is the first time I have written to the Corner, but I hope it won't be the last. My subject is conservation of food. Our problem is to feed our allies this winter by saving as much food as we can. That doesn't mean to starve ourselves, but to eat more of the things we can't send the allies. There are lots of people who do not realize that we are at war. Two of my uncles were drafted, so it is pretty near home to the people around here. I am 10 years old. I will be 11 the 13th of February. Have I a twin? I wish some of the cousins would write to me. I read the letters sometimes. I like the Farmer. It is a very good paper. I have some pets. I have a dog named Bruce and a horse named Bell. My name is Elizabeth Hamilton.—Elizabeth Hamilton, Soap Lake, Wash.

Lucy Has a Little Baby Sister.

Dear Aunt Nellie: I am 7 years old and in the third grade. I have a brother and he 9 years old. He is in the fourth grade. We have a baby a month and seven days old today. Aunt Nellie, this is the first time I have written to the Children's Corner. My sister is 4 years old. She knows her A. B. C.'s and can count to 10. My birthday is the 23d of December. My brother's name is Lee and my two sisters' names are Opal and Rosie. Mamma, Lee and I are digging beets and onions, carrots, turnips and rutabages. Mamma is holding the baby now. Papa found a hill of potatoes that had 26 potatoes in it.—Lucy Smith, Route 2, Oroville, Wash.

Our First Letter From Louise.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I will be 12 years old the 24th of November and am in the fifth grade. I started to school when I was 7 years old. I have a brother and a sister younger than myself. My sister is 15 months old and her name is Margaret and my brother will be 8 years old the 23d of December and his name is Francis. I live on a 30-acre farm and have one horse and five cows and about 50 chickens. My father has been gone for about three months, but will be home again soon. If I have a twin I should like to hear from her.—Louise Weber, Box 133, Langley, Wash.

Lamb Dances and Plays Tag.

Dear Aunt Nellie: This is my first letter to the Children's Corner. I am a little girl eight years old. I have two sisters and two brothers. Their names are Arthur, Woodrow, Helen and Virginia. We live two miles from school. A big truck carries us to and from our school. I am in the fourth grade. I live on a farm of 450 acres. We have five horses, one colt, seven cows and five calves. We also have 70 sheep. We have a dear little pet lamb. His name is Pete. He can dance and play tag. Mama and I enjoy the children's letters very much and I like Aunt Nellie, too.—Ida Jones, Box 17, Tumwater, Wash.

Likes to Go After the Cows.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We live on a 160-acre farm. We have seven cows and six heifers and one calf. I like to go after the cows. I am in the fourth grade. I am 9 years old. We only have five children in school. I like to go to school. We are going to have an entertainment. I have a long piece. We had a good garden. My cow's name is Cherry. I hope my letter will be in the Farmer.—Leslie Peck, Republic, Wash.

Vera Likes to Go to School.

Dear Aunt Nellie: I have a cow named Nell. My cat's name is Muff. My name is Vera Dale Peck. I am in the second grade. I am 6 years old. I like to go to school. Our baby's name is Carrol Eugene. Leslie is writing tonight. I have three brothers, Leslie, Carrol and Vernon. I haven't any sister.—Vera Dale Peck, Republic, Wash.

Have Named Baby Sister, Ella Lucile.

Dear Aunt Nellie: This is the third time I have written to the Children's Corner and I hope it will not be the last. I have a little baby sister. She was born October 20. We have named her Ella Lucile. I have found two twins. Their names are Anna Straube and Effie Stayman.—Vera Allen, Box 26, Roy, Wash.

Lee Rides Five Miles to School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and in the fourth grade. My teacher's name is Miss Parsons. I ride five miles to school. I have three sisters.—Lee Smith, Route 2, Oroville, Wash.

Eveline Writes to Us.

Dear Aunt Nellie: Mama, papa and my two little brothers went to the Lewiston stock show, so they have not got home yet. I will be very glad to see them. I am 10 years old. I will be 11 the 29th of November. Have I a twin? I would like to correspond with anybody who would write to me, big or little, young or old. We have 35 children in our school. I have five brothers and two sisters. My brothers' names are Anton, Freddy, Carl, Melvin and Richard. My sisters' names are Violet and Delma. Dear Aunt Nellie, I hope we are able to keep our Corner a long time.—Eveline Vida Dahl, Grangeville, Idaho.

Save Food For the Soldiers.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I saw my letter in the Corner when I wrote. I have had no time to write until now. I love to read the Children's Corner. My subject is that we should save. I think we should save food for the soldiers. They are working hard every day. I am willing to do my part. I wish some little girl would write to me. I will be 11 the 20th of January. Have I a twin? If I have I wish they would write to me.—Helen Schoenberg, Prosser, Wash.

Boy Question

(Continued from the preceding page.)

I notice that a number of the farmers' wives and daughters are delivering the milk either with automobile or horses. I shall have to give to some extent my personal experience, which I think will apply to a number of others in a more or less degree. My wife has helped what she could in haying. It was very hard to hire any one to help hay this year. I was in town one day and asked three or four men about helping me, but they had many excuses and none wanted work. "Let the crops rot." Wages were not taken into consideration. It was help I wanted and I would have paid the price rather than have had my wife in the hay field, as she was not strong enough. This fall I had a job of carpenter work to make over a cow stable. My wife let her housework go as much as she could and worked at carpenter work with me five days and we got the job done. By the way, when we came onto this ranch 17 years ago, where stumps, logs and brush were everywhere, she and I built the house, barn and outbuildings and did not hire a person. She now helps milk, work she has not done before in years, and many other women are doing the same. Farmers are buying more machinery to help out in the labor situation. Women are good milkers and they take an interest in their work to make it go.

J. E. SHANNON, North Yakima: Due to the agitation and price paid for labor, more women offered their services than usual. Their work was generally performed with the aspect of an honest effort, although in most cases work was quite expensive, with but few individual exceptions. In most work the cost of producing and harvesting the crop would consume all profit. The place of most efficiency was found in the packing house, and even here men have to be supplied to wait on them, increasing the cost of operation. However, their efforts did relieve the labor situation and was of much assistance in taking care of the crops, for we found that efficient labor was very difficult to get on account of the best young men having been called to service in the army and those that were not called would not render decent service under any condition. Would say that our best labor was given by men of middle, and over age, who haven't in past felt the necessity of working, hence were not available. Question very much if exchange of work was in excess of past seasons, and owing to the amount of work that must be done within a definite time, cannot be carried on effectively to any great extent. Would add that farming is unlike many other industries in that it can easily be crippled by lack of efficiency.

Germans and Boxer Campaign.

It is a long time since the Boxer campaign, but the war department has no trouble in reaching into pigeonhole 23 and pulling out General Chaffee's manly protest to Field Marshal Waldersee concerning the looting of the Chinese observatory by German troops. Teutonic methods have changed since then only for the the worse.—New York World.

OUR MAIL ORDER SHOPPING SERVICE

Offers an Opportunity for

Christmas Shopping by Mail

You have practically the same facilities for selecting merchandise as enjoyed by our resident customers.

Orders by Mail, Telephone or Telegraph are given the same thought and care as would be exercised if you were shopping in person.

Just now the store is especially bright with useful, "givable" articles that suggest

Splendid Holiday Gifts for Men Women and Children.

Let us know your requirements. We will gladly send you full particulars regarding assortment, prices, etc., by return mail.

We prepay shipments on dry goods by parcel post to any point in the state.

Aged herd, young herd, calf herd, produce of cow and get of sire—First and second, Congdon & Battles.

Shorthorn Banquet

Eaters Should Work, Says Benson

"Our government has regulated the price of wheat and the price of bread and contemplates the regulation of other foodstuffs. It regulates many things, and with that we have nothing to say; the next and logical step to take is the regulation of labor," said Commissioner of Agriculture Benson of Washington, at the Shorthorn banquet at the Pacific International.

He went on to say that the demands of the army had taken comparatively few of our young men, if we considered the population of the United States, and yet there was an acute shortage of labor on the farms already. There were plenty left in the small towns. We saw them, doing nothing. He believed the time would come and come speedily when the old law that if a man would not work, neither should he eat, would rule. We must have work done, and he saw no reason why we should tolerate idleness.

On the other hand we must not neglect the laborer's side of the matter. They must receive good wages, and he was disposed to grant them many of their demands in the way of comforts.

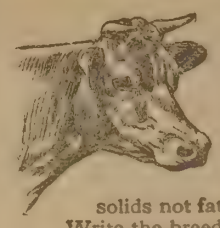
He related some of his personal experiences on his sheep ranch, where he could not secure help though it was plentiful in the nearest towns. Great loss threatened and so far no laws would fit the case. He was heartily applauded by the 200 Shorthorn men and their friends and allies who were present.

Professor E. L. Potter of the Oregon Agricultural college spoke of the firm foundation the beef cattle industry had reached and the sureness with which the beef sire brought profits. A quantity of Mexican cattle without beef blood in them brought $48 a head for beef in the San Francisco market recently; in Chicago a bunch of Shorthorn grades brought $240 a head in the same week.

Frank Brown touched on the advantages derived from shows and the success of the sales.

Alex Chalmers closed his remarks by saying: "I wish I were younger. I wish I were young and had wings. I'd fly over Germany and drop a bull on the kaiser."

Alex Macdonald explained how he had fitted his prize-winning steers in California.



Professor Iddings paid a glowing tribute to the California college people who were good losers and generous winners.

Other speakers filled the evening with good things. The gathering was the largest and most enthusiastic gathering of Shorthorn men ever held in Portland, and came as a fitting finale to the great Shorthorn show at the Pacific International, and the splendid sale staged during the week.

The Lapps.

The Lapps, who have been settled for centuries past in the northern parts of the Scandinavian peninsula and Russia, were originally nomads subsisting on their reindeer herds, but they are now settling among the inhabitants of the country and becoming "solid citizens."

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castillian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG. Buhl, Idaho.

724 Pounds Butter

and 11,076 pounds milk is the record the dam of a bull calf dropped Sept. 1, 1917. The sire, Dominus, is out of an 817-lb. cow and sired by a bull out of an 853-lb. cow. PRICE $125 for quick sale.

J. B. STUMP & SON, Monmouth, Ore.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM. Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Goldon Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.

HENRY STEWART, Prop., Albany, Ore.

Ashwood Farm Jerseys

FOR SALE—BULL CALVES; sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.

McARTHUR & STAUFF, Rickreall, Ore.

A Bit of Courtesy

When writing to any of the Jersey breeders advertising in these columns, you will confer a favor to the breeder and to the American Jersey Cattle club by mentioning this paper, as they want to be able to trace the exact source of their inquiries. Will you do this, please?

Waikiki Farm

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.
ROUTE 7, SPOKANE, WASH.

Mellow Lawn Jerseys

are promising to make a year's herd average of 700 lbs. butter, including every head from two to sixteen years old. Since June, 1916, none went under 612 lbs. butter. Junior champion bull calf at Oregon state fair, 1917, is our oldest male left for sale. Sired by our herd bull, Gertie's Poppy's St. Mawes.

F. A. DOERFLER. Silverton, Ore.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Dec. 3.—Bulls in corn had an advantage today, owing largely to acceptance of opinions that for the present the likelihood of enlarged receipts had been discounted more than enough.

Prices closed nervous, 3-4 to 1 1-2 cents net higher with January $1.20 3-8 to $1.20 1-2 and May $1.18 7-8 to $1.19. Oats gained 1 5-8 to 2 1-8 cents. The finish in provisions ranged from 10 cents decline to a rise of 2 1-2 cents.

Notwithstanding that rural advices told of heavier shipments coming and despite the fact that the trade continued to export much more liberal arrivals in the near future, the fact that receipts of corn today were of only moderate volume had an evident tendency to make sellers cautious. Offerings were scarce throughout the session and it was noticeable that predictions of excellent weather failed to bring about any change in pit sentiment. One reason was that strength of oats acted as an offset for all bearish developments.

Provisions averaged higher with hogs and grain. Realizing sales, however, weakened the market during the last half hour. Exports for the week showed a decided falling off, compared with last year.

1916-17	5791	1696	295	2693

The Wool Market.

BOSTON, Nov. 30.—The Commercial Bulletin will say tomorrow: "Except in a few instances, Boston wool merchants report a quiet market during the week. Values keep very firm for all grades, and especially so for wools adapted to military needs. The situation at the mills has changed very little, new business being exceedingly moderate."

Scoured basis:

Texas—Fine 12 months, $1.68@1.72; fine 8-month, $1.55@1.60.

California—Northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon—Eastern No. 1 staple, $1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.60@1.65; territory fine staple, $1.80@1.85; half-blood combing, $1.75@1.80; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Seattle Market.

SEATTLE, Wash., Dec. 1.—Wholesale jobbing and commission houses were notified today by the railway companies that all cars of foodstuffs must be unloaded within 24 hours after cars are spotted beginning Monday. As there is little available cold storage space this will reduce the volume of perishable foodstuffs arriving, stop price cutting that results from frequent oversupply, and strengthen prices.

Graded Yakima Gems are quoted at $36 to $37 per ton, with Puget sound stock at $33 to $34. F. o. b. prices have sharply declined and Seattle buyers have offers of $25@28 for locals and are playing for an $18 market. Jobbers are gradually rearranging their purchases on the no-grading basis, as demands for culled out stock have met with flat refusals. The stock is being graded here at a cost of $4 to $5 per ton and will be sold at that level.

The week comes to a close with one of the most singular features in the poultry trade ever known on Western avenue. All turkeys, geese and ducks were cleaned up and nothing in the way of a surplus was placed in the coolers.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 56c per dozen, pullets, 48@50c dozen.

Poultry—Live hens, fat, over 4 lbs., 21@22c per lb.; 4 lbs. and under, 18@19c; old roosters, 15c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 15c per lb.; springs, live, fat, 20c per lb.; hens and young tom turkeys, 28@29c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 16@18c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; heavy, 9@13c per lb.

Hides—Salted, 18c per lb.; flint-dry hides, 32@33c per lb.; salt kip, 18c per lb.; green hides, 15c per lb.; green calf, 28c per lb.; dry calf (under 5 lbs.), 34c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry full wool sheep pelts, 36@38c per lb.; salt bulls, 14c per lb.

Live Stock Quotations.

At Omaha.

OMAHA, Dec. 3.—Hogs—Receipts, 9300. Market, 10 to 15c lower; heavy, $16.90@17.25; mixed, $17@17.10; light, $17@17.25; pigs, $12@19; bulk of sales, $17@17.10.

Cattle—Receipts, 16,000; market steady, 10 to 15c lower. Native steers, $9@15; cows and heifers, $6.50@10.25; western steers, $8@13; Texas sters, $7@10.30; cows and heifers, $6@9.25; canners, $5.25@6; stockers and feeders, $6 12; calves, $9@12.50; bulls, stags, etc., $5.75@8.

Sheep—Receipts, 22,000; market steady, lower. Yearlings, $11.50@13; wethers, $11@12.50; ewes, $9@11.50; lambs, $11.75@17.75.

At Chicago.

CHICAGO, Dec. 3.—Hogs—Receipts, 47,000. Strong, bulk, $16.75@17.15; light, $16.20@17.05; mixed, $16.50@17.25; heavy, $16.50@17.25; rough, $16.50@16.70; pigs, $12.25@15.

Cattle—Receipts, 29,000; weak. Native steers, $7@14.75; western steers, $6.10@13.40; stockers and feeders, $6@10.80; cows and heifers, $5@11.30; calves, $7@13.25.

Sheep—Receipts, 22,000; weak. Wethers, $8.70@12.80; lambs, $12.40@16.80.

At Portland.

PORTLAND, Ore., Dec. 3.—Cattle—Steady to firm; receipts, 841. Medium to choice steers, $9.50@10; good to medium steers, $8.75@9.50; common to good steers, $7.25@8.25; choice cows and heifers, $7@8; common to good cows and heifers, $5.50@7.25; canners, $3@5.25; bulls, $4.50@6.75; calves, $7@9.50; stockers and feeder steers, $4@7.50.

Hogs—Lower; receipts, 3008. Prime light, $15.85@16; prime heavy, $15.90@16.10; pigs, $13.50@15; bulk, $15.85@16.

Sheep—Weak. Receipts, 785. Western lambs, $13.50@14; valley lambs, $13@13.50; yearlings, $12@12.50; wethers, $11.75@12.25; ewes, $8@10.

Portland market on shorn sheep 2½ to 3c under quotations.

Spokane Stockyards, Monday.

Hogs—Receipts 26, market steady. Prime light, $16.20@16.35; prime heavy, $16.15@16.35; pigs, $14.50@15.25; stockers and feeders, $12@13.50.

Cattle—Receipts 42, market steady to strong. Best beef steers, $8.75@9.25; good steers, $7.75@8.50; best beef cows, $6.25@7; ordinary to good, $4.75@6; canners, $3@4.50; best heifers, $6.50@7.25; bulls, $5@6.50; calves, $6@8.50; stocker and feeder steers, $5@7.25.

Sheep—Receipts none, market steady. Prime lambs, $13.25@14; good lambs, $12@12.50; prime yearlings, $11.50@12.50; prime weathers, $11.25@12.25; best mutton ewes, $8@10.

Portland Market.

PORTLAND, Ore., Dec. 1.—The country produce markets have been quiet since Thanksgiving. A large stock of live poultry accumulated over the holiday and this was worked off later by shading prices. Country dealers sent in a good many turkeys they had left over and these were cleaned up at 27@28 cents.

Eggs are tending downward as usual at the beginning of December. There has not been much of an increase in receipts, except of pullet eggs, but the supply is more than ample. The showness of the storage egg trade is also a weakening factor.

Butter continues scarce and prices are holding fairly steady. The trade expects the downturn at San Francisco to affect this market soon.

According to reports from the coast stocks of cheese there are heavy and a break in the market would occasion no surprise as the movement is far from good.

There is a very slow movement of potatoes and the market is on a weak basis. There is hardly any buying for shipment owing to the car scarcity. A nominal price in the country is $1.25. On Front street Oregons are quoted by jobbers at $1.40@1.75, and Yakima Netted Gems at $1.75@1.85. Onions are dull with $3 the top quotation on the street.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $53.50 per ton.

Millstuffs—Bran, $32 per ton; shorts, $35.

Barley—No. 1 feed, $54; brewing, $54.50; rolled, $57@59.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24; grain $24.

Eggs—Oregon ranch, case counts, 48@50c per dozen; candled, 53@57c.

Poultry—Hens, 17@19c; ducks, 18@20c; turkeys, live, 20c; geese, 13@14c.

Butter—City creamery, prints, 45@49c per pound; cubes, extras, 44@44 1-2c.

Cheese—Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 15@15 1-2c; pork, 19@19 1-2c.

Hops—1916, 14@15c; 1917 crop, 15@20c.

Potatoes—Oregon, buying price, $1.25 per hundred.

Wool—Eastern Oregon, 40@65c; valley, 58@60c.

Beans—Buying prices: Oregon navy, 9c; Lady Washington, 9c; colored, 8c.

Seattle Wheat.

SEATTLE, Wash., Dec. 1.—Considerable grain, a part of 1,000,000 bushels to go from the Idaho territory to the Minneapolis milling section, has been moved this week, according to reports received by local grain and milling authorities. The sale of Idaho wheat in preference to Coast terminal holdings was made possible through the differential in freight of about 15 cents per bushel.

There have been numerous inquiries through the week for Washington, Oregon and Idaho wheat by millers of Montana and as far east as Tennessee. Extension of the mixing of soft with hard wheats to a wider extent is expected by hard wheat millers of the east, and these inquiries are regarded as a natural sequence of this condition.

Portland Wheat.

PORTLAND, Ore., Dec. 1.—Business in the grain market is slack these days. There is an occasional sale of oats or corn at the exchange, but on the whole the dealers have little to do, and they are marking time awaiting developments. Prices move within a narrow range, influenced by changes in the eastern markets.

About the only activity is in the millfeed division. Most of the millers are sold ahead and some can not catch up on their orders for several weeks. The demand far exceeds the supply, but prices are maintained at $32 for bran and $35 for shorts on the advice of the food administration. The heavy demand is due to the fact that the feed grains are much higher in price than millfeed.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $1.50 cwt.; sweet potatoes, $3.25@3.50 cwt.

Apples—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.85@$2.25; Winter Bananas, $2 box; Jonathans, $1.25@1.75 box; Wageners, $1.35@1.65 box; Rome Beauties, $1.25@1.60 box; Spitzenburgs, $2@2..25 box; King Davids, $1.25@1.35 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 32@33c lb; brick cheese, 34c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

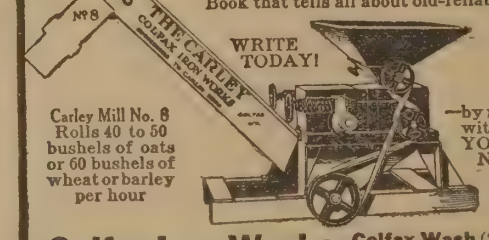
Eggs—White filler, guaranteed, $13.25 case; selected storage, $12.50.

Live Poultry—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 12c lb; turkeys, 22@25c lb.

Dressed Poultry—Hens, 18c lb; broilers, 20@21c lb; old roosters, 11c lb; ducks, 17c lb; geese, 14c lb; turkeys, 27c lb.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 15c; salted cured, 17c; green bulls and stags, 12c; salted cured, 15c; kip, 15 lbs. to 25 lbs., 20c; calf skins up to 15 lbs, 28c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.



Wanted Tenants

for one or two years with equipment to farm twenty-acre cleared tracts. Will furnish seed to plant and contract to take the crop. This is an exceptional opportunity for good farming.

Flush Out the Cow After Calving

Thorough irrigation of the uterus and vaginal tract with a reliable antiseptic, once or twice after a cow drops her calf, will give you the greatest insurance you can have against Barrenness, Abortion, Retained After-birth, etc.

B-K is more effective than lysol, carbolic acid, Lugol's solution and oily coal-tar disinfectants, which all make the uterus more acid, and do not clean. B-K heals the uterus and vagina by cleaning and removing the slime and acid. It kills the germs because it is much more powerful. The application of B-K as a douche is simplicity itself.

If your dealer does not have B-K—send us his name.

FREE BULLETINS—Send for complete information—"trial offer" and bulletins on Farm Disinfecting—Contagious Abortion—Calf Scours, Hog Sanitation or Poultry Raising. **Dealers wanted in every town.**

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO. 50. DECEMBER 13, 1917. ** WEEKLY.

ANNUAL POULTRY ISSUE

FOR some time the poultry industry has been approaching a major crisis. There has never been a period when it was not easy to lose money in chicken farming, as many a town man, with visions of a life of ease and opulence attained by the simple process of coaxing a few hens to shell out golden eggs, has discovered. With the increased financial and economic tension of the last two years, however, the ease with which even a poultry-wise man can be parted from his savings in the poultry business has increased amazingly.

This is a good time to face the actualities of the case. Feed is high, and there is no immediate prospect of its becoming much lower. By the irony of fate, the lowly hen is put into competition with the fighting men of all nations, who, like herself, must be fed largely on wheat. Labor is high, and it will be many a day before it becomes cheaper. Again the hen is competing for a prime necessity in the great world conflict: men who can do things efficiently. So far, the very fundamentals of the situation look black for producers of eggs and chickens.

Turning from the negative to the positive side of the case, there are certain very definite things which can and must be done. Labor must be conserved in every possible manner, whether it is the labor of the farmer and his family, or of hired assistants. This means that labor-saving equipment of every practical sort must be installed, and that the work of tending to the flock must be systematized as efficiently as the work in a big packing plant is systematized. Houses, runs and feed storage facilities must be built or rebuilt with this labor-saving ideal in mind.

The item of feeding must be supervised, keeping constantly in view the fact that wheat must go first of all to feed the human population of the world, and that other grains must be substituted as fully as possible in all the rations of animal husbandry. The department of agriculture and the state agricultural schools and experiment stations have realized this need, and are prepared to tell the open-minded poultrymen just how to substitute various other foodstuffs for wheat, in a large measure. Home grown feed must be utilized as far as possible, to save transportation.

A final adjustment which the poultry industry must make is in its relations to the consuming public. This is no time for bickering or misunderstanding. Poultry foods have increased 60 per cent in price in the last year, while eggs have advanced only three per cent.

Continued on page nineteen.

Winners Unconscious of Honors Due Them

Here are the five hens that won first in the All-Northwest laying contest held at Pullman, Wash., during the year 1916-17. The contest was held under the auspices of the poultry department of the State College of Washington. There were some 200 entries. The five birds shown here laid 971 eggs during the year, an average of 194.2 eggs per hen. They are owned by J. A. Hanson of Corvallis, Ore.

Pays to Bacon the Hogs?

Writer Says That Prices Paid by the Dealers Are Unsatisfactory; Believes More Is Made by Butchering on the Farm

DARRINGTON, Snohomish County, Wash., Nov. 26.—Weather conditions have been most favorable for clearing land and fall plowing in this part—almost everybody cleared more or less land and is still at it and more plowing has been done than usual, which will help a good deal toward getting crops in earlier in the spring. Not any of the crops were damaged to any extent by frosts this fall; everything was gathered in the best of condition. Some complaint is heard of potatoes rotting in the roothouse, owing to the blight, but only on a couple of farms. In my opinion, this was caused by carelessness in selecting the seed last spring. My experience has taught me not to plant any tubers that are in any way affected or damaged. Cattle are in good condition and pastures are still green, so, therefore, cattle can still browse around and save considerable feed. Farmers around here are not greatly elated over the net receipts they get when shipping beef and pork to Seattle. Some of us will cure and smoke our pork and then sell—we can afford to sell pork 15 cents per pound less than market price and then make more money than if we sent hogs to the commission man.

C. B. NEIDERPRUM.

Farmers See Many Changes.

CASTLE ROCK, Cowlitz County, Wash., Nov. 30.—Things have come to the farmer with such changes in the last few months that they have not fully decided whether it is the best thing to have the government take charge of the price regulation or not. To most of us it seems that if price regulation by the government is to be done at all, it should be carried through to the letter and not to touch it in spots. Public opinion is heartily in favor of more government regulation, having the prizes fixed on all farm produce sold to the consumer. We are told that there is plenty for all, but when we come to pay double, and, in some cases three times, as much for articles than we did a year ago, it looks like the government is not meeting the end that it intended to do.

The mildness of the weather has given some of the farmers a breathing spell as the grass has freshened up, making feeding slight with the exception of grain. In some places the stock was sold off, anticipating an early winter. Hay and grain being high, this precaution has lightened up and hay, especially, has not been any higher in price than it was a month ago. The stock held are amply provided for during the winter. To those having hay to sell, $20 to $25 per ton will give a good substantial profit for their trouble as the high price of labor does not last many days while harvesting, and with the aid of machinery the cost does not make very much difference on a ton of hay. Those paying $20 or $25 per ton for feeding cattle or sheep can make a profit even at these prices, if he uses judgment in feeding; that is, making the stock eat up the most of it before wallowing the hay under their feet. Some have a cutter and mix shorts with it after wetting. This has a tendency to stimulate the desire for a careful cleaning up of the scattered forksful of hay. There has been some radical changes among the farmers' homes since the draft took away from Cowlitz county over 50 of the boys who worked on the farms. Some were drafted, others enlisted, and it acted the same as though taking one of the teams in each home. In some cases they were the mainstay of the home and naturally the load shifted onto other shoulders. Some had to let the plans to put in more crops, milk more cows and clear more land drop. A man invested some money in farm machinery to make up for the boy who had done his share of the farm work and the small tractors have, in a few instances, done the work in the field. But another regulation is needed. Farmers should be helped by the government to put in their crops, market them, guard them against the small merchants who buy their eggs in trade and sell them sugar in small lots at a big profit, as well as shorts, flour, bran, and other staple articles.

C. C. BROWN.

Labor Hurts Next Year.

LACROSSE, Whitman County, Wash., Dec. 6.—We all submit to government rule almost without exception. Do doubt farmers are disappointed about the slowness and more so the uncertainty of the way the grain is marketed. They feel it very keenly and lots of complaint is made, but nothing unpatriotic. The uncertainty of farm labor for next year is cutting short much acreage for 1918 as farmers are already strained to more than capacity with the present labor situation.

M. E. SCHRECK.

Abandoning Silage?

PORT ANGELES, Clallam County, Wash., Dec. 1.—From a farmer's viewpoint of the government's regulation of prices on his products and purchases there is a divergence of views, but an observer would say that the majority of opinions favors government regulation. The exceptional mildness of the fall and early winter decidedly favors this section of the country for there is considerable more out-of-door feed for the stock, which is very acceptable in face of high prices. There is no export of hay and the quantity of hay shipped in has been lessened to some extent by root crops. Barley and potatoes have been used with excellent results for the hogs. Silage is on the decrease around the Dungeness country, where a dozen or more of our successful farmers have abandoned them. The army draft has probably taken about 20 farmers' sons from the county of Clallam and it works a hardship on the small farmer as the hired help is hard to get and this class of help balk at long hours. The prevailing wage for a potato digger is from $3 to $4 per day and board.

J. P. CHRISTENSEN.

Flour Mill Will Help.

TWISP, Okanogan County, Wash., Nov. 26.—The fall work is including very little seeding and most of the fall plowing has been done since November 1 in this district. We have had no crop losses due to cold or wet weather. All seem to be Hooverizing in this vicinity. There is a sharp demany for honey, that there might be some economizing in the use of sugar. A great many are consuming more potatoes and fruit and less flour and meat than usual. Barley is being used instead of wheat by some for hog feed and if properly prepared gives equally as good results. Some of our grain farmers are growing impatinet waiting for the government to establish its unit for handling wheat. A flour mill is being built and is nearing completion at Twisp that will eliminate some of our trouble. The seasons have all been late this year, and stock raisers that are short on feed are hoping for a different schedule for the seasons for 1918.

GEORE LA RUE.

Expect Labor Shortage.

CHIMACUM, Jefferson County, Wash., Nov. 30.—We do not seem to notice the effect much yet of the government reglating the prices on farm products bought and sold in this community, and public opinion seems, so far to favor it or anything to help this great war. We are having such a mild fall and stock and milch cows are on pasture yet and have not been in the barns at night yet, which is six weeks later than the average year. Very little or none of the hay has been fed yet, which is going to help out the farmers who are short of hay out. At the prices of hay now I do not think that there can be a profit made on it by feeding to stock. This coming winter most of the straw that is of the best will be used for feeding young stock. Many of the farmers' sons have gone into the army and navy; also many of the experienced farm hands, such as milkers and creamery men, which has made farm work a little backward, but fall plowing is under way at present and all lands fit to plow will be worked up this fall so as to have it ready for spring work, as the farmers expect a shortage of labor in the spring and are going to be prepared for it as much as possible.

JOHN VAN TROJEN JR.

Shorts Saves Money.

HUNTERS, Stevens County, Wash., Dec. 3.—Because of continued good weather there has been an unusual amount of fall plowing done. Stock has run on stubble fields through November and a saving has thus been made on the winter feed. Farmers are quite generally falling in line in the matter of "Hooverizing." Hog feeders have this season made use of shorts in fattening and this mill product has thus, to a larger extent, taken the place of ground wheat. Shorts are used in the fattening pens at the start and a little ground wheat fed at the finishing. In this section ground wheat has been the main fattening ration for hogs. The use of the shorts reduces the cost of the fattening.

Red Cross Seeks Ten Million New Members

Greatest Campaign in the History of the Organization Marks the Approach of Christmas

THE addition of 10,000,000 members to its roll is the aim of the American Red Cross in the most gigantic membership campaign in its history, now in progress. Though membership is now being added in ever-increasing numbers, and though the books never close to those who wish to join in the great humanitarian movement, the great drive will feature the week before Christmas, culminating on Christmas eve, December 24. On that evening it is hoped that in the windows of several millions of American homes that never before took interest in the organization the red cross on a white square, bordered by a line of blue, lighted by a candle from behind, will shine for the declaration that that home is enrolled in the greatest propaganda of mercy that the world has ever known. These window signs are provided by the Red Cross workers. Each home where a person is a member will receive a sign with the large cross in the center. For each additional member of the family who joins an additional, but smaller, cross will be given to be pasted onto the window sign.

The campaign is a nationwide one. Every city, every town, every country precinct will be invaded by the campaigners. While membership dues in the organization are one dollar a year, the present campaign is not being made primarily, or even secondarily, for additions to the funds. "It isn't your dollars, but your membership we want," says the message sent out from national headquarters. As was the case in the Liberty bond campaigns, it is the desire that as many individuals as possible take part in the great movement.

In the state of Washington little is being said about the number of members the national association has announced as the state's share in the grand total of 10,000,000 new members. The aim has a far greater goal. The slogan being repeated everywhere is, "Every man, woman and child a member," and it is the intention of the leaders to make the total number approach that goal as nearly as possible. Everywhere the workers are striving to increase the number allotted to their given districts, and it need not be surprising if, when Christmas day dawns, the total membership in the state will have reached several hundreds of thousands and the grand total for the nation have been "oversubscribed" far above the 10,000,000 goal, just as the two Liberty loans were oversubscribed by the loyal citizenry of the land.

R. R. Fox of Seattle is campaign manager for this state, working with a corps of other officers and volunteer workers. For the three northwestern states and Alaska Harvey Lindley of Seattle is the Red Cross chairman. Speaking of the campaign recently, he said:

"This is a highly important service, and one in which every citizen can join. It means so much to the boys in the trenches and to the thousands of others soon to be in active battle, that I can not imagine any citizen refusing to join.

"We are not after money, but after members, entailing a cost of $1 each for the year—mighty small when measured by the benefits of our soldiers. This money is necessary, but of far more importance is it to have a compact body of citizens at home joined together to carry out the loftiest patriotic aims and ideals. We intend to make it possible not only for citizens to join in this movement, but to take memberships in the Red Cross for the boys in the trenches. When the Oregon list is exhausted there will be memberships for other soldiers."

The people of the country are awakening to the great need of the services rendered by the Red Cross. Never was that need so great as it is at the present time, and it will be yet greater when more American soldiers reach the battle fronts of Europe during the present winter and the coming spring and summer. The object of the Red Cross is the relieving of suffering and the saving of life. It goes onto the battlefields with nurses and ambulances and medical and surgical appliances, rescuing wounded soldiers, comforting them during their dying hours or saving them from death or hopeless invalidism.

The great scope of the work of the Red Cross is indicated by a statement recently issued from national headquarters, showing the effects being made. The following paragraphs are extracts from that statement:

The principal purposes of the work of the American Red Cross abroad may be summarized thus:

1. To do everything possible to assist our army and navy in insuring the health and comfort of American soldiers and sailors abroad, and

2. To relieve suffering among the armies and destitution among the civilian populations among our allies.

Work for the American army is the first and most important part of the Red Cross program in France. More than 12 base hospitals organized by the Red Cross and now mustered into the army medical corps, are in service in France.

Fourteen thousand Red Cross nurses have been enrolled for duty, and approximately 3000 have already been called into active nursing service, of whom 2000 are working abroad.

Relief of refugees throughout the devastated zone has been undertaken by the Red Cross. Relief warehouses have been placed at strategic points behind the lines, from which food, clothing, household goods, agricultural implements and tools are being distributed to the returning refugees. Foodstuffs to the value of $2,870,300 have already been bought in France or shipped there for military and civilian relief.

The commission to Italy used an appropriation of $200,000 for immediate relief in that country. The Red Cross acted promptly when the Italians were forced to retreat, pledging its aid through Ambassador Page and placing a special relief fund of $250,000 at its disposal. This was later raised to $750,000.

Commissions are at work in Rumania and Serbia. A commission and deputy commission have been assigned to England, and a special department has been set up for Belgium.

In Belgium the work of the Red Cross, which is confined to the part of the country still held by the allies, is chiefly in cooperation with the relief interests of the king and queen. The Red Cross is assisting Belgian hospitals and children's refugees, aiding Belgian villagers to reestablish themselves in the devastated zone left by the retreating Germans, and helping to care for Belgian children, both in Belgium and in France and Switzerland.

Forty-nine army base hospital units and five for the navy have been recruited, organized and equipped by the Red Cross. More than 12 of the army units and two of the navy units have now been mustered into their respective medical corps and are seeing service. These units can care for a 500-bed

(Continued on page seven.)

Wheatless Wednesday

More beef, mutton and pork and more wheat must be saved to relieve a critical situation in the national food supply. The situation in the state of Washington is more acute than the people of the state have been led to believe, according to Charles Hebberd, federal food administrator for Washington.

"In addition to the one wheatless and two meatless meals each day, I request that every family observe a wheatless Wednesday," says Mr. Hebberd. "At no time was it contemplated that the hotel and restaurant program of wheatless and meatless days should cancel the one wheatless and two meatless meals each day requested of every family. Beginning November 21, every family in the state should observe a strictly wheatless Wednesday in addition to one wheatless and two meatless meals each day."

Herbert Hoover of the national food administration has advised Mr. Hebberd that all combination sales of food commodities are forbidden, except that a dealer may sell sugar in combination with cornmeal at the rate of one pound of sugar to two pounds of cornmeal.

"The sale of one or more food commodities upon condition that the purchaser shall buy one or more other food commodities from the seller is regarded as a combination sale within the meaning of the ruling," says Mr. Hoover.

Wants Schoolless Days.

Bobby had often heard his parents talking of wheatless days. Having been to a party with them the other night, and having arrived home late, he was pretty tired. In the morning when his mother called to him to get up and get ready for school, he said: "Aw, gee, ma, when is schoolless day?"

Farmers in Session

Large Problems Under Discussion

As The Farmer is going to press there is a meeting in Spokane, Wash., the annual convention of the farmers' union of northern Idaho and Washington state. Problems of vital interest to the farms and to the country as a whole are being discussed and actions taken concerning them.

Probably the two outstanding questions are those of farm labor and the grading and marketing of grain under the government regulation. There is a strong feeling that the government should devise some plan to permit experienced farm help to remain on the farm and not be drafted into the army. Many reports of serious handicap to individual farms are made among the delegates due to loss of young men who have enlisted or have been drafted into the service.

Much dissatisfaction is also being expressed with the situation in the grading and marketing of wheat. The farmers of the northwest feel that they are the victims of an inequitable system under the government regulations as they are being worked out in the northwest. One of the features of the week of the convention is the conference with a federal representative of the grain department with a view to solving to some degree the question of grades and grading methods.

Next week's issue of The Farmer will contain comprehensive reports of the farmers' convention and the grain deliberations.

One of the most enthusiastic farmers' union conventions in the history of the country was that held at Pendleton, Ore., last week, the annual convention of the Oregon-Southern Idaho union. Patriotism was the dominant

(Continued on page nine.)

War Makes Meat Breeds of Poultry Popular

The Old Plymouth Rocks, "Made in America," Are Still the Dual Purpose Breed

By JAMES DRYDEN

While the Leghorns have a deserved popularity on the special poultry farms, the Plymouth Rocks are equally popular on the general farms. The average farmer takes very kindly to the barred Plymouth Rock. It is a general-purpose breed, and the farmer wants meat as well as eggs. In the present war emergency there is an additional reason why the farmer should prefer the general-purpose breed; that is the shortage of meat in the world. There are a number of varieties of Rocks, the only difference in varieties being a difference in color of plumage. The varieties are the Barred, White, Buff, Partridge, Silver Pencilled, Columbian. The first two are the most popular and most desirable as general utility fowls. The Rocks are good sitters, lay brown or tinted eggs and have yellow skin and shanks. They make a very desirable combination of meat and eggs when properly bred.

The picture shows a good type of Barred Plymouth Rock male. It has the characteristic shape. It is a 10-pound male, bred at the O. A. C. station from a 214-egg hen. He is rather large, however, for a strictly egg-laying strain, and is rather large for a general-purpose fowl.

The photo above represents a better type to select for breeding good egg layers. He is finer in bone and not so large as the first one. He is a good type of Rock, but lacks some of the color points for a show birds. He was bred at the Oregon station from heavy laying strain. Notice his alert, vigorous appearance.

The picture at the top of next column shows a Barred Plymouth Rock with exhibition barring. The bars are distinct and close.

The Barred Plymouth Rock was the first breed of chickens "made in America," and it is still, after more than half a century, the most popular of American breeds.

Light Brahmas.

The light Brahma is the largest breed of domestic fowls. It is a native of Asia, but the type has been considerably changed by breeders in this country. It is the slow-going breed, which accounts in part for its activity in the meat-producing line and for its reputation as a slacker in the egg line. It frequently attains a size of 12 pounds in the male. There are good layers among them, but on the average we can no more expect the most profitable egg production from Brahmas

than we would expect the highest milk production from the Hereford. The Brahmas have a special field to fill in furnishing the demand for large roasting chickens, and good prices are paid for them. It is a meat tyye of chicken strictly. A Brahma picture is seen in center of column four.

The Wyandottes.

The Wyandotte is a general-purpose breed, made in America. It is a very attractive fowl when bred to the standard. The hen shown in photograph

here is a typical exhibition specimen, with small rose comb, blocky in shape and fluffy in feather. Good layers, however, are usually more closely featured and have a little more comb and a little more range. In the laying contests the Wyandottes have given a good account of themselves. The winning pens, however, have usually been of the English type, a type that would get small consideration in our poultry shows. If the Wyandotte is to be bred strictly for eggs regardless of show standards, it will soon lose its distinctive type. The general-purpose breeds must maintain their general-purpose characteristics at the sacrifice, if need be, of some egg-laying qualities. There are eight varieties of Wyandotte, the differences being of color only. The Whites are the most popular breed. At the foot of the last column is a typical White Wyandotte cock.

White Leghorns.

Above is shown the first prize cockerel at the Panama-Pacific exposition, owned by Mrs. E. B. Martin, Downey, Cal. Below is the first prize pullet at the same show, owned also by Mrs. Martin. These photographs do not show the relative sizes, the pullet being taken larger than the cockerel. They are splendid specimens of the exhibition White Leghorn. It will be noticed that the male carries his tail rather low. A low tail is required by the standard. The comb is rather small, with five distinct points, the rear of the comb preserving a horizontal position instead of following the curve of the head. These are also show points that the judge pays particular attention to in the show room. These points, however, are not important from an egg-laying standpoint.

Good layers are just as likely to be found with a high tail and a large comb. The Leghorn is a sprightly, active bird, built on trim lines. Females weigh from three to three and a half pounds. The Leghorn is the popular breed on the special poultry farms. Their early-maturing qualities and small consumption of food are largely responsible for their reputation as egg producers. They lay a white egg and have yellow skin and shanks.

The Rhode Island Red, possibly next to the Plymouth Rock, is the farmer's

general-purpose fowl. It is pretty much of the same type, though somewhat smaller, bred to the standard. In Rhode Island and other New England states there are sections where it is more numerous than all other breeds together. It is a good utility fowl when bred along utility lines.

A Light Brahma Cock.

Washington Hens Lead at Storrs.

A pen of White Leghorns entered by the Hollywood farm, Hollywood, Wash., at the Storrs laying contest, is leading all other pens for the first two weeks of the contest. This is a good beginning, and a good begining in an egg-laying contest is a pretty good indication of a pretty good ending. The eggs laid by this pen in the two weeks numbered 74, while the average of all the pens was 17.32 eggs. J. D.

To mend a thimble drop a small quantity of sealing wax inside, dip the middle finger in cold water and press the thimble on. When this is finished polish the thimble up with a piece of chamois and you have a new silver thimble set with coral.

You Cannot Judge Layers by Their Appearance

The trap nest is revolutionizing the poultry industry. It has shown that the poultry breeder is going it blind in judging of egg laying qualities by external appearances. It has shown also that no breed has a monopoly of

heavy layers, nor of poor layers. Here are two good looking Barred Plymouth Rock hens of about the same shape or type. One laid seven eggs in a year, the other with the same care laid 220. Can any one pick out the best and give a satisfactory reason for the selection?

California's Land Settlement Board

To Give People With Small Means a Working Chance for a Home

By RAY W. FELTON

What California is doing and what the nation as a whole may do to assist worthy land settlers, overcome the farm labor problem, keep boys and girls on the farm and thereby insure the permanency of American agriculture, formed the subject of an address by Dr. Elwood Mead of the University of California at the fifth annual meeting of the Washington Irrigation institute at North Yakima, Tuesday, December 4.

Dr. Mead's remarks impressed his hearers in no uncertain manner. They seemed sound, practical and worthy of most careful consideration and the message he brought to Washington is of more than ordinary interest because we are confronted at this time by problems just such as he described and which California is attempting to solve much after the manner in which they were handled by Australia, a country which has undergone during the last six years a change in rural life which gives promise of an everlasting state of democracy and a peace of mind for its people hardly dreamed of under the old system of huge estates and tenant farmers.

Dr. Mead prefaced his talk by declaring nothing desirable nor worth while can come by chance. The artist must have the vision before he paints his picture. To the extent that he plans his work is the final result determined. The same is true of our state and national plan of rural development. We must fix upon a definite plan of procedure and then pursue it with utmost care and diligence.

"When the free land disappeared in this country nothing was provided to take its place," said Dr. Mead. "Even now with the overpowering need of increased agricultural production we still find the drift toward the city. It is for the purpose of making rural life possible and attractive for the man of small means that California has undertaken to solve the settlement problem."

California, Dr. Mead explained, has passed a law establishing a land settlement board which has authority to buy 10,000 acres and settle it with people with small means, and a working chance to provide homes for themselves and to complete their payments with the revenue derived from the land. Two hundred thousand acres have been submitted for the consideration of the board. The state soils expert is now examining the various tracts proffered. When the land is purchased the board will have it subdivided. Then it will be sold to applicants at 5 per cent down with 56 years to complete payment. Interest at the rate of 5 per cent will be charged and 1 per cent will be paid each year on the principal. The state of California will use the federal farm loan plan to secure money with which to finance the scheme.

The state will prepare the land for irrigation. Architects throughout the commonwealth are donating their services in order that desirable plans for dwellings and outbuildings may be furnished settlers when they come. The state will erect the buildings and the occupants will be required to pay one-third of their cost and one-third of the cost of preparing the land for irrigation. Applicants will be required to have capital of at least $1500 to give them a working chance to make good. This may bar a number of worthy settlers, but it will be remembered that many failures on western homesteads have resulted because the settlers attempted to go on the land and settle up without what is popularly known as a "grubstake." Such a system really is no kindness to the settler.

"We are figuring on encouraging a kind of agriculture that will maintain soil fertility so that it can be handed down to posterity in as good shape as it was found," said Dr. Mead. "Live stock will be encouraged and purebred stock will be insisted upon in so far as it is practical. We know the value of sheep and we will see to it that they have a place in this colony."

Farms of different sizes are planned in order that individual needs may be provided for.

"We feel we have formulated a plan which will be of real service to our people and one which, while it may appear socialistic at first, has now received the indorsement of nearly every one who originally was opposed to it," said Dr. Mead. "It works no hardship on the taxpayer as all the money the state advances will be repaid with interest.

"One of the greatest fields for work of this kind is under the reclamation project here in the west. When the reclamation act became law it was entirely an emergency measure. The social and economic side of farm life was entirely overlooked. It contained provision for getting water on the land, but that is not enough. We need a change which will take care of those conditions and give us intelligent supervision and management of projects which will insure to the settler all the best there is in country life.

"Australia has so changed its conditions that it is no longer a country of great estates. After six years of the new order of things it is a country of home owners and happy people. The government has so arranged things that I have seen families travel 12,000 miles and be on their land making a living 30 days after their arrival.

"The old way was to compel the people to pay the productive value of the land before there was any production. High interest rates and short periods of payment have resulted in a condition that only the speculator profited by.

"Our public lands have been thrown open under the homestead act which did nothing to ascertain the character nor the adaptability of the prospective settler. Nothing has been done to keep out the speculator. Lands have not been classified. The settler, inexperienced and often unfitted for the business, has been left to work out his own salvation. We haven't thought this thing out as we should have. We need to begin to plan that we may realize the results hoped for. It is just as necessary to get the lands ready to farm and the houses up as it is to get the water on. Much time has been lost and with such a system somebody's going to lose always—sometimes it's the settler and sometimes it's the government.

"In Australia they discovered that farm labor—desirable farm labor—was as necessary as the farm itself. They realized they must have appealing conditions to attract desirable laborers. So they built homes for the laborer and his family and provided each with a two-acre block of land on which they could do light farming sufficient to produce necessities for their household and give them a place to live where they might be happy and contented. In the state of Victoria 8800 acres have been given over to the farm help and they are given an opportunity to pay for their acreage.

"Before this system was established Australia experienced the same labor troubles we are having. The average farm laborer had no idea of thrift nor of home responsibility. Go to Australia today and you will see what this system has done. It has given the country a thrifty set of farm hands, happy and contented because they are surrounded by their families and are being given a chance to acquire something of their own and live decent, respectable lives. Only 15 per cent of this class have been unable to pay for their homes during the six years the system has been in existence. This two-acre tract for farm help is a part of the California plan.

"There are 32 countries in the world where the government has taken actual charge of farm settlement. America is one of the few that has done nothing. Australia has just appropriated $100,000,000 to extend this work in spite of having to send 350,000 troops to war from a population of only 5,000,000.

"If we are going to create more desirable conditions affecting rural life we must take action similar to what I have had occasion to investigate in Australia. Farm tenantry in America is growing. It is now nearly 40 per cent. If we are going to save our country from being over-ridden with an undesirable lot of outsiders accustomed to sordid conditions, but willing to pay the highest rent for our lands, we must act now and make our rural life fit to live by our own people."

Must Dig Down in Pocket to Pay Loss

By PAUL E. TRIEM.

J. P. Johnson of Silverdale, Wash., is one of the old settlers in the valley. Some 33 years ago Mr. Johnson homesteaded his original farm in this locality. During the last 15 years he has been a poultryman, and has succeeded in building up a productive flock.

Mr. Johnson looks back with considerable longing to a time when poultry feed could be bought for $14 a ton, and when, as a direct consequence, eggs could be sold profitably for nine cents a dozen. There was a moderate amount of money to be made in those days.

'It's a different matter, this year," he comments. "With wheat and other grain feeds where they are, it is almost impossible to come out square with the game. Our poultry plant, for instance, represents an investment of at least $3000. We get up at 4 in the morning and work till 8 at night. We feed carefully. We have the association cooperative store, through which to do our buying, at a big saving. And with it all, we have to dig down in our pockets every month and make up the deficit. Appreciating to the full, as we do, the necessity of doing our part to feed the country, and desiring whole heartedly to help to the extent of our ability, the fact remains that many of us face the alternatives of selling our chickens or of paying for their board out of our pockets."

In connection with the suggestion that wheat be eliminated from the ration and roots and kale put in its place, Mr. Johnson calls attention to the disastrous result of adopting this policy in Europe. The drop in production is reported to average 90 per cent.

Likes the Farmer.

To The Washington Farmer: Herewith I enclose 50c (fifty cents), for which please send me The Washington Farmer according to your rates, three years for fifty cents. We like the Farmer very much.

JOHN BYERS.
Clarkston, Wash.

To Form Council

Will Work With County Agent

A movement has been started to effect the organization of a county council of agriculture in Okanogan county. It will help to unify the efforts of the existing organizations and to strengthen the work they are doing. It is a nonpartisan, nonsectarian, nonsecret organization representing the whole farming population, men and women alike, and acts as a clearing house for every other association interested in work with rural people.

The purposes of the organization are:

1. To bring to the county agent the counsel and advice of the best farmers in the county as to what ought to be done and how to do it.

2. To provide an organization for quickly and easily reaching every community in the county with information of value to that community or to the county as a whole.

3. To provide a plan for organized self-help, enlisting the cooperation of all farmers interested in carrying out a county agricultural program of work.

Letters have been sent to every group of organized farmers in the county, setting forth the aims of the plan and asking that each organization select a representative to be present at the first annual meeting of the council and to represent the organization and district from which he comes.

Detailed plans for the first annual meeting will be published later, but they will include lectures by farm specialists, stereopticon views of special agricultural operations, business sessions to work out plans for the coming year's work in addition to entertaining features. The farming public will be invited to attend the entire session.

Walter A. Holt is agricultural agent for Okanogan county.

WANT MORE HOGS

Demanded by War Necessities

J. R. Shinn, county agriculturist for Spokane county, in conference with Charles Hebberd, federal food administrator for Washington, and the agricultural committee of the Spokane Chamber of Commerce proposes a working plan for a greater production of hogs in the Inland Empire.

Every farmer who has been drafted but not called, according to Mr. Shinn, should do his bit by raising sows. The Spokane county agriculturist declared such a plan to be workable. The chamber of commerce hopes to accomplish at once something to prevent the wholesale slaughter of hogs, and looked with favor upon Mr. Shinn's suggestion.

The vital necessity of more hogs on the farm immediately was urged by Mr. Hebberd.

"Patriotic citizens are carefully saving every little bit of bacon in their desire to help win the war by conserving food for our allies," says Mr. Hebberd. "That is a splendid movement on their part. Yet we are failing to produce the hogs we should. One brood sow on the farm will mean more in winning the war than the pork saving of 100 people. It is vitally important that hog production be increased at once. We are facing an emergency."

B. E. Smead, working in conjunction with Washington State college and the Spokane Chamber of Commerce, has been named to work in the country districts in organizing boys and girls' pig clubs.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

The Call to the Poultryman

The poultryman, like the man in almost every other productive industry, faces problems hard to solve. He is urged by the government to increase his output of meat and eggs to help feed the hungry world in a time when so much of the world is in the business of destruction instead of production. Yet the costs of poultry production have gone up in recent months far above the proportionate increase in the selling prices of poultry products.

Wheat is not only the staff of life for man, but it is the staff of life for hens as well. Yet it is so high in price that the poultryman can barely afford to feed it, and the allies need it so badly that the government urges him to substitute other feeds wherever possible. Both patriotism and necessity impel the producer to eliminate a large percentage of his wheat ration, and the great danger follows that he will be unable to maintain a profitable standard of production while making the experimental changes to other feeds. Furthermore, other feeds are no less expensive.

There is no specific remedy for the trouble. Would that there were. It is another case where personal judgment will have to be relied upon. The poultryman must save wheat when he can; he must use it where good results require it; he must buy as cheaply as possible and market with ever increasing study and care.

Keeping a Good Reputation

In a recent address a speaker said: "It is just as hard to lose a good reputation as it is to get it."

That is a higher concept of man's confidence in his fellows than most of us have. It ought to be just as hard to lose a good reputation as to get it, but is it? Do not people work long years to establish themselves in the confidence of their fellow men and then suddenly, by one careless or thoughtless or unfortunate act, bring everlasting suspicion upon themselves? If a neighbor has lived beside you for a decade and established himself in your opinion as honest and truthful, how long does it take you to become suspicious of him if he tells you one small lie, and how long does it take to remove the suspicions from your mind? If the store that has treated you squarely ever since you located in the community suddenly dumps a shoddy bill of goods on you when you expected your usual fair treatment, do you look at your purchases a little more carefully thereafter?

No, unfortunately for mankind, there is too little tendency in the human heart to believe its fellows; there is too great tendency to distrust. One lie, one cheating, one misrepresentation, even one bit of circumstantial evidence sometimes destroyes the work of a lifetime of reputation building. And a good reputation once lost is as difficult of reestablishing as is the drop of water that vanishes into vapor.

Eternal vigilance is the price of trust and confidence. How vital it is that the honest man be always honest and avoid all appearance of dishonesty! And how good it would be if neighbors and friends and acquaintances and patrons would strive to develop in their hearts more willingness to overlook small faults and see instead the record of honesty and trustworthiness in those with whom they come in contact.

Load Cars to Full Capacity

Comparatively few farmers order any considerable number of cars during a year to ship their produce. Many, however, do. Every such farmer and every warehouse or storage company, every cooperative association, every grange, every shipper of any kind or degree, should ship cars loaded to full capacity whenever it is at all practicable.

When a car is hauled in a freight train with only half a load, nearly half the transportation value of that car and a part of the engine power are wasted. It is a very real and serious waste, for every day producers and consumers are losing real value because of inability to send or receive produce.

There is real loss occurring at this time because of insufficient cars to handle the produce, manufactures, fuel and munitions in this country. Yet it is the exception rather than the rule for cars to be loaded with all they will safely carry.

Of course, the farmer with half a car of hay or stock or potatoes, or the like, can not fill a whole car, but somebody else in the community probably has something to ship that could be put in the same car, or the shipment could be so billed that a neighboring station could complete the car. Every effort should be made to eliminate this waste of carrying capacity while the whole world cries for transportation facilities.

Worth a Name

Years ago the writer knew a young lady whose name was "Babe." That was all the name she had. Her parents had been unable to decide on any name suitable for her, and so she had drifted along through childhood and young womanhood without any other title. To her acquaintances custom had dulled the absurdity of it. To strangers it seemed like a monument to the silliness of her father and mother.

Think of traveling through life without a name! We are tempted to sympathize with the prisoner who is designated by a number only; but he is better off than the person who hasn't anything to distinguish him from those about him.

Is your farm unworthy of any distinguishing name? Is it just like everybody's farm? Hasn't it anything that makes it stand out by itself? Isn't it better than other farms in some way? If you have anything good to sell, do you not think it would be fine to give the farm and the people of the farm the credit?

The name establishes the product as of a certain quality and value. A good name is worth money, and if you should sell out, the name would figure in the price, or ought to.

Apples a Necessity of Diet

Food Administrator Hoover, from the depths of actual experience, insists that the apple crop must move and that the apple is a real food. While helping starving people in Belgium he discovered that one cause of severe suffering was lack of fruit. Apples contain some vital and important principle of nutriment.

The great apple districts of the northwest will feel that renewed confidence that comes to those who realize that their worth is recognized and their virtues are not to be slighted by ignorance.

Washington Gleanings

M. J. Newhouse has taken up his duties as county agriculturist of Clarke county.

R. D. Williams of Pomeroy has received for wheat and barley sold off of his place this year, $15,993.23.

The school children of Olympia are making good progress with the fruit drying for the allies in Europe.

Products of the vine, tree and soil will pay people of Walla Walla valley approximately $14,000,000 this year.

One thousand tons of sauerkraut are being manufactured by the Interstate Products company at Vancouver.

Farm women of the North river country are giving 1000 quarts of canned fruits and vegetables to the Aberdeen Red Cross.

The report of the bureau of crop estimates of the United States department of agriculture places this state's potato crop at 9,880,000 bushels and amounting to more than $11,000,000.

Forty thousand pounds of hops to be grown by Andrew Slavin of North Yakima were sold to G. N. Grafton to be delivered during 1918, 1919, and 1920. The price next year is to be 16 cents, and for the following years is 15 cents.

The Yakima Fruit Products company has accepted a second contract to furnish cider vinegar to the government, this one calling for delivery during February of 30,000 gallons. This is in addition to 20,000 gallons sold already to the federal authorities.

Yakima valley crops for 1917 are expected to come close to $20,000,000. It is estimated that the present fruit crop will bring $500,000 more than last year, that fruit products will add $900,000, hops $50,000, hay $50,000, sugar beets $1,000,000 and wool $400,000.

It is the belief of officials of the Wenatchee Orchard Land company of Moses coulee, and also of coal experts who have visited the property, that enough coal underlies the holdings of the company in the coulee to supply all north central Washington with a high-grade product.

S. S. Kennedy of Chehalis has started to take out a large quantity of mint roots, which will be planted on a large acreage two miles east of Lakeview, for the North Pacific bank of Tacoma. The demand for mint roots is much greater than the present supply, according to Mr. Kennedy.

In a bulletin just issued by the department of agriculture it is shown that up to date 31,962 carloads of apples have been rolled over the country, of which 6369 were shipped from Washington alone. It is the largest amount from any one state, surpassing its nearest competitor, Illinois, by 1389 carloads.

Carl Greif, a farmer of the Uniontown district, purchased four head of purebred Shorthorns at the Lewiston stock show as a foundation for a purebred herd. He paid $600 for a bull from the Harry Sommers herd, of Bozeman, Mont., and $515 for one heifer from W. O. Minor's herd, paying the top price at the female sale.

E. M. Long of the Wenas raised 126 tons of No. 1 potatoes on his six-acre patch. They were sold at $30 a ton, making a return of $3780, or $630 an acre. Amos Ross of Tleton Drive, another root crop farmer, on his one and three-quarter acre tract, grew 27.5 tons of carrots, which he sold for $495, the price of $18 a ton.

What Others Say

Review, Toppenish: The sugar beet grower need not take a back seat for the grain grower when it comes to a question of patriotic service. Sugar is almost as important to the soldiers in the trenches as flour.

Banner, Buckley: Humanity, christianity and civilization, to say nothing of the great need of saving domestic animals for meat, leather and wool supplies, ought to prevent a single animal from dying by cruel neglect.

The Daily Hub, Centralia: The matter of a good rural credit system is only partially understood in the west, and any movement which will tend to get the banks and the farmers on a firm basis of understanding will be of benefit to the community.

Advocate News, Sumas: All Europe is short by many millions of hogs, as well as in other live stock, and it is estimated that it will require several years, even after the war is over, for those countries to get back to their normal production. That means high prices for pork for several years to come.

More Land Needs Water

Irrigation Institute Digs into Problems

By RAY W. FELTON.

If the food production of the United States is to play the all-important part in winning the war then the United States as a government should lose no time in getting every available foot of land under cultivation. Such was the substance of a resolution adopted by the Washington Irrigation Institute at its fifth annual session held at North Yakima December 4 and 5.

Uncertainty as to the government's policy of pushing to completion large irrigation projects in the northwest has prevailed for some time. The resolution adopted at the irrigation institute expresses the conviction that failure of the government to complete such projects without delay will be a serious detriment to the food situation and the department of the interior is appealed to in the hope that proposed projects may be speedily carried forward.

Want Long Time to Pay.

Having a bearing also on the war situation and what our farmer boys are to do when they return from the front was a resolution asking congress to amend a bill by Senator Chamberlain of Oregon proposing a method for the raising of funds for the reclamation of arid lands so as to provide for long-time payments for land purchased from the United States. This is hoped for because the institute believes such a plan will give the man who actually will live on the land an opportunity to acquire a home. The resolution refers to "our home-coming soldiers," urging that opportunities be opened to them to find a vocation and to make homes and firesides for themselves which will in part repay the great debt the nation will owe to them.

Resolutions were adopted asking the legislature to provide a measure which will prevent the contamination of streams from which water is taken for drinking purposes; requesting a law requiring state lands to pay assessments for benefits derived by reclamation work; assuring the support of the institute to the efforts of the state labor commissioner in his effort to improve housing, sanitary and social conditions for those engaged in regular seasonal farm work, and requesting the reclamation service to send its experts to the annual sessions of the institute in order that those present may have the benefit of their knowledge and their assistance in spreading the gospel of better farming.

Officers Are Elected.

Officers were elected for the ensuing year as follows: President, E. M. Chandler, Yakima; first vice president, E. F. Benson, commissioner of agriculture; second vice president, Walter N. Granger, Zillah; directors, Professor O. L. Waller, Washington State college; H. M. Gilbert, North Yakima.

The untiring efforts of the retiring president, Commissioner Benson, were recognized in a vote of thanks extended him and in various addresses delivered by members of the institute. The session closed with a banquet and a good fellowship meeting, after being pronounced one of the most successful meetings of the organization.

Mrs. Wallis Williams of Yakima, a representative in the last legislature, described some of the efforts she and her colleagues had put forth to get the water code "over the top." Senator D. V. Mortland discussed irrigation district and drainage laws. Attorney Ralph Williamson of the reclamation service told of legislation which had been secured to make the water code conform to existing local reclamation projects.

The address of Dr. Elwood Mead, of the University of California, on California's plan for rural development, occupied much of the time Tuesday afternoon and proved highly interesting and decidedly beneficial.

In the absence of R. H. Thompson of Seattle Captain Doane discussed the state's interest in the development of its water resources. S. J. Harrison of Benton City described his experiences in securing aid from the reclamation service for arid lands. Eck Baughn told of successful small pumping plants for irrigation purposes.

O. M. P. Goss of Seattle told of the uses of woodstave pipe for irrigation purposes and illustrated his talk with lantern slides. The development of the fruit byproducts industry was a most interesting topic handled by Ira D. Cardiff, until recently director of the state experiment station, but now head of a large fruit and vegetable evaporating plant in North Yakima.

Dr. T. D. Tuttle, state commissioner of health, opened the Wednesday morning session by talking on the use of irrigation canals as a domestic water supply.

Sheep on irrigated farms was a topic in which there was more than ordinary interest. It was ably presented by I. D. O'Donnell, the well-known farmer of Billings, Mont., who was given an ovation when he appeared. Discussion of Mr. O'Donnell's methods and the profits to be derived during these war times continued throughout the afternoon, and the topic was reentered for discussion whenever opportunity presented itself. Roy P. Bean, agriculturist for the Tieton project, took an important part in the sheep discussion.

Professor I. A. Balmer of Cle Elum related experiences with fertilizers.

C. H. Swigart read a paper by Engineer R. K. Tiffany of the reclamation service, giving data as to the amount of land under water in the Yakima valley and describing future projects. The paper stated that 202,000 of the 403,000 acres for which irrigation plans had been made were under cultivation in 1917.

Vaughan Morrill of the American Wood Pipe company, Tacoma, and George Royer of the Coast Culvert and Flume company, Portland, addressed the meeting Wednesday afternoon.

At the banquet I. D. O'Donnell presided as toastmaster, and toasts were responded to by C. J. Smith of the Union Pacific system; Howard A. Hanson, representing the Seattle Chamber of Commerce; J. H. Allen, state highway commissioner; R. M. Coglon, state leader of county agricultural agents; Lee M. Lampson, agriculturist for Benton county; Victor J. Garber of the Utah-Idaho Sugar company; Professor O. L. Waller, State College of Washington; Joseph T. Hinkle, president Oregon Irrigation congress; E. C. Burlingame, Walla Walla; Attorney Ralph Williamson, North Yakima; President-elect E. M. Chandler of the irrigation institute; the Rev. Dr. Bragon, Grandview; Attorney L. O. Meigs, North Yakima; Attorney John P. Hartman, Seattle, and Miss S. I. Anthon of the Yakima Republic.

Among those present at the convention were the following:

North Yakima—Eck Baughn, Mrs. J. R. Vincent, J. E. Forman, R. D. Rovig, J. G. Terry, W. L. Flagg, J. B. Fink, C. E. Hewitt, W. D. Wrighter, T. A. Noble, F. E. Maxley, A. B. Weed, R. S. Calland, R. I. Burrill, John Borgeson, J. O. Greenway, M. F. Thornton, J. N. Price, H. P. Vermilye, C. L. Darling, J. D. Storrs, W. L. Wright, C. M. Hauser, F. E. Ross, J. V. Ellis, Thomas Hope, L. O. Humphrey, W. L. Huxtable, G. W. Welkel, R. H. Hayden, E. P. Sanford, H. W. Hallowell, O. G. Steward, Mrs. Ina Williams, W. H. Johnson, D. V. Morthland, A. B. Cline, A. C. Volenback, H. S. Coffin, C. R. Villaume, N. C. Richards, H. Nelson, A. G. Pollock, R. F. Brindley, Frank Huston, R. H. Warnick, A. E. Larson, A. L. Strong, C. F. Vandewater, W. R. Rowe, O. E. Brashears, C. H. Hinman.

Sunnyside—C. E. Edwards, G. D. Hall, O. D. Lindgren, J. G. Heinz, W. B. Bridgman, W. R. Tuttle, C. E. Johnson, Bert Robbins.

Wapato—J. E. Childs, W. P. Sawyer, F. P. Lea, Ben Forman, P. E. Wise.

Zillah—J. W. Fitts, William Clark, J. A. Cheyne, W. H. Alsbury, K. A. Olsen, A. C. Lewis.

Grandview—Farwell Morris, M. R. Foisy, E. J. Brand, C. A. Christenson.

Kennewick—R. M. Freeman, J. J. Rudkin, L. M. Lampson, John Starhand, H. H. Davis.

Selah—Milo Erlandson, F. H. Walters, J. N. Dean.

Pullman—F. J. Seivers.

Beverly—F. W. Kellogg.

Seattle—O. P. M. Goss, E. J. Bartells, C. W. Nessley.

Okanogan—Calvin Casteel.

Tieton—M. E. Guptail.

Mabton—F. C. Story, W. A. Kelso, P. P. Maddocks.

Outlook—P. J. Quesinberry.

Portland—W. E. Douglas.

Toppenish—F. A. Wiggins, W. B. Meyers.

Naches—J. S. Moore, G. E. Mehl, T. E. Forsythe, E. Y. Robinson, O. Kail.

Benton City—L. L. Todd.

Prosser—S. W. Fristed, Luke Powell, J. C. Mathews, H. L. McClain, F. R. Schoenberg, B. B. Sherman.

Two Rivers—G. W. Chute.

Rimrock—T. I. Thoman, C. F. Gleason.

Granger—R. I. Mayer, Oscar Nelson.

Attalia—A. H. Hawkins.

Outlook—S. A. Shockley.

Kiona—W. A. Kelso.

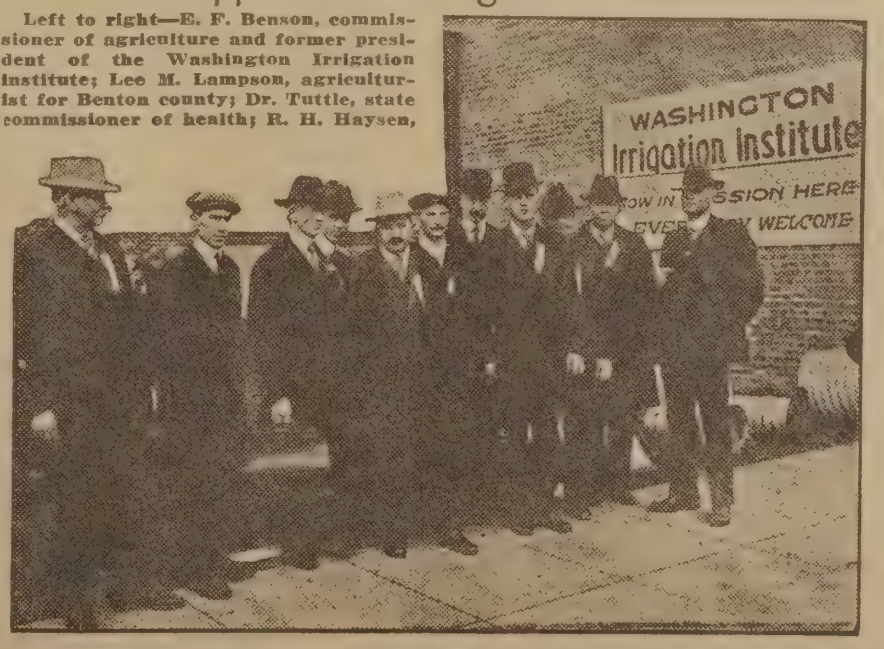
Yellum—C. M. Mudd.

Billings, Mont.—I. D. O'Donnell.

NOTES OF THE INSTITUTE

Mrs. Ina Williams, Washington's only woman representative in the last legislature, created merriment at a session of the irrigation institute when she grew reminiscent and recalled some of the pioneer gatherings in the Yakima valley. It followed a recital of her experience at the last legislative session. "They (the pioneers) used to tell of the wonderful progress the county had made since their arrival in the valley," said Mrs. Williams. They told of the enormous waste places that had been turned into veritable Gardens of Eden, and so on and so on—the homes they had built and the children they had reared; but not one word about their wives. You would have thought they did it all themselves—even to the children. They told of the wonderful achievements of the late Jack Splawn and of the splendid work of Ben Snipes. It was all fine and interesting, but I used to wonder what Mrs. Jack Splawn and Mrs. Ben Snipes and all the other pioneer women had been doing all this time. But I finally came to the conclusion that, after all, we pioneer women must be very wonderful women to be the wives of these very wonderful men."

Lee M. Lampson, agriculturist for Benton county, started a lively discussion at the session of the Washington Irrigation institute by asking Farmer O'Donnell what he had done to overcome bloat in sheep and cattle. O'Donnell had been telling of the excellent results obtained by pasturing sheep on alfalfa. Lampson said this was one of their troubles in Benton county. O'Donnell said he had experienced little trouble. Roy P. Bean, agriculturist for the Tieton project, got into the fireworks in the afternoon. Bean is an acknowledged authority on animal husbandry. O'Donnell says Bean has him "skinned to death." Well, Bean's remedy for bloat, both in sheep and in cattle, is to keep them off the green alfalfa. E. C. Burlingame of Walla Walla and others told of stockmen who made a practice, like O'Donnell, of running sheep and cattle on green alfalfa without bad effects. Burlingame declared it was largely up to the man and the way he handles the situation.



The labor problem has been especially acute this year in Northwest districts where sugar beets have been raised. I. D. O'Donnell was asked at the recent session of the Washington Irrigation institute what they had done in his state (Montana) to overcome the trouble of getting reliable help to stick to the sugar beets. He said the Russian had been found to be the best labor. "He is thrifty and he will bring his whole family and stay with you the year 'round if you need him," said Mr. O'Donnell. "I have several Russian families on my farm and they have proved highly satisfactory. They are much better than either the Mexicans or the Japanese, and they know the sugar business."

Speaking of conserving what ordinarily are farm waste products, I. D. O'Donnell, the Billings farmer, says he makes more off the waste products of his farm than the entire crop of the average North Dakota farm. Waste products, he says, can be made to produce from $7.50 to $15 per acre. During these high prices most any farmer can make money, O'Donnell asserts, but in ordinary times money is not so easily made, and the real "velvet" comes from utilizing what ordinarily is thrown away or left to decay. Mr. O'Donnell says they make excellent "maple" syrup on his place out of a combination of sugar beets and corn cobs.

Discussing the paper read by R. K. Tiffany, manager of the reclamation service in Yakima, F. A. Wiggins of Toppenish, at the irrigation institute, made an eloquent appeal for extension of all irrigation projects, but referring especially to the idle land on the Yakima Indian reservation. Mr. Wiggins declared the nation's war debt must be paid by the soil, but the soil can't pay it unless a lot of the land now idle but capable of big production, is placed under cultivation.

Snapped at the Irrigation Institute

Left to right—E. F. Benson, commissioner of agriculture and former president of the Washington Irrigation institute; Lee M. Lampson, agriculturist for Benton county; Dr. Tuttle, state commissioner of health; R. H. Haysen,

secretary of the Washington Irrigation institute; Marvin Chase, state hydraulic engineer; I. D. O'Donnell, well-known Montana farmer; F. F. Morris, Grandview; F. W. Kellogg, J. G. Heinz, Manager T. R. Horne of the Utah-Idaho Sugar company, W. W. Robertson of the Yakima Daily Republic.

Red Cross Seeks Ten Million New Members

(Continued from page three.)

hospital each, and some of them have been reenforced to enable them to take over larger hospitals.

The Red Cross has also organized 45 ambulance companies, with a total personnel of 5580, all of which have been taken into the army medical corps, some for service abroad, others for the camps and cantonments. A general hospital for the use of the navy has been established at Philadelphia. Convalescent homes have been built.

Through its sanitary service the Red Cross is cooperating with local health authorities in maintaining the best possible sanitary conditions in the zone just outside military jurisdiction at the training camps and cantonments. Twenty sanitary units have been organized for this purpose.

The Red Cross has placed field directors of camp service at 38 camps, cantonments and naval stations. The purpose of the camp service is to cooperate with all the agencies that are advancing the welfare of the enlisted men.

My Experience With Poultry

By J. M. SIGNOR, Buckeye, Wash.

The Farmer is a welcome visitor at my house every week and I find many helpful ideas and much valuable information in its various departments. Ideas worked out into real experiences make interesting reading and are much more valuable than just theories. As I have had some experience this past year in chicken raising I pass on a few things which may help some reader of the poultry page. In my article last spring telling of my progress in reducing tall timber land into a working poultry and hog ranch, I mentioned a poultry house in process of construction and I have it nearly finished now.

It is 86 feet by 16 feet, 5 feet high in front and 4 feet high at the rear. It is constructed with a jog in the roof and there are seven windows in that jog in the drop front facing the south. There are also seven other windows on the front fitted up with curtains and screens for the purpose of letting in fresh air.

There are windows along the rear of the building also which let in light under the dropping board. This allows about double space for scratching. The fresh air space and the number of windows required for most satisfactory results was figured out and arranged by the poultry department at the state college at Pullman, Wash. There are windows enough to furnish all the light needed when there is any daylight, but during the short days when darkness come on so early and the days are short, too much of the time of the hens is spent on the roosts and that is just the time when eggs are high and we want the hens to keep strictly onto their job. That any self-respecting hen is perfectly willing to do that has been proven beyond a doubt by those who have furnished hens artificial light. Therefore acting upon this experiment, my poultry house is fitted up with lanterns which will furnish light during the short days and during that period the artificial lighting will have to begin about 4 o'clock p. m., and I shall not turn it off till about 8 o'clock in the evening. I don't happen to live on an electric line; any one who does could have the poultry house wired, which would make less work.

I have just finished my poultry house and as my laying stock of fowls are all very young I have no great results to report as yet, but I am planning to get results which will be worth while. Even now my flock of young pullets are worth mentioning. I raised 300 White Leghorn single combs, Wycoff strain. My first hatch came off April 15 and my second hatch May 15. They commenced to lay at the age of six and a half months. Of course they are not yet up to their best by a good deal, especially the second batch, but even so I am getting from the young flock of 250 from 50 to 60 eggs a day. I will give the daily ration and cost:

Sprouted oats before wetting	15 lbs. cost 26c
Potatoes, carrots and mangels boiled	15 lbs. cost 23c
Mixed with the above vegetables	
Egg mash	5 lbs. cost 20c
Bran	5 lbs. cost 20c
Cracked corn	15 lbs. cost 40c
Wheat	10 lbs. cost 28c
Oyster shells	cost 10c

This makes the daily cost for feed....$1.47

For 31 days, the expense will be $45.57, and as the price of eggs is now so high that I am getting 55 cents cash, even though my flock is only producing five dozen a day my profit, over the price of the feed, amounts to $39.68. This is not so bad for a beginner in the poultry business. Of course I expect to get more eggs when the whole flock of pullets get started at laying. I have not a very wide field of experience in raising chicks, but I learned some things this last spring that are worth mentioning.

I have an oil heater in my brooder house and I learned in handling my young chicks that they require a temperature not less than 84 degrees within 10 inches of the floor, where they hover at all times of the day and night. They need this degree of heat to keep them from piling up and preventing the under ones getting sufficient fresh air. They also need this amount of heat to keep them contented and lively so they will scratch and keep busy and healthy. Another thing I learned by experience is how to keep their bowels regulated. First and always the house must be kept dry all the time. There is nothing worse than dampness for young chicks. Don't get a mistaken idea that they should run out on to cold, damp ground even though the sun shines. Keep them dry, but see that they have fresh air inside the house.

I watched the droppings carefully and found I could keep their bowels regulated by careful feeding of the prepared chick feed. My trouble was to avoid feeding too much. I found that a low pan of fine grit was very essential to their health and when their bowels showed signs of becoming too loose, I added more charcoal to the chick feed. There is nothing better for either hens or chicks. I watched my young chicks closely, looking them over twice a day, and if any were ailing I took them to the house where I had a little hospital. If they were bound up in their bowels, I gave them a couple of drops of sweet oil and a little bran till they came out all right, when I took them back to the flock.

I noticed if the chicks ate feathers they stopped as soon as I gave them plenty of bone meal. This is worth taking note of as when chicks take to eating feathers they will pick each other and I have known a whole flock to literally be eaten alive, the stronger ones getting away with the weaker ones.

The demand for eggs and the price which holds up from year to year keeps interest keen in best poultry methods. I have been engaged in about all kinds of farm business and am free to say that poultry raising seems to me to be the most interesting.

Quicksands are not caused by water constantly flowing over sand. It is only where there is an upward current that they are found. Imagine, for instance, a bucket filled with sand. Water poured on that sand does not make it "quick." If, however, the bucket had a hole in its bottom and water was forced through the hole quicksands would be formed.

Artificial and Natural Incubation and Brooding

Have everything ready beforehand and start your hatching operations early in the year, says Harry M. Lamon, of the United States department of agriculture in Farmers' bulletin 528.

A well-ventilated cellar is the best place to operate the incubator.

The machine should be operated according to the manufacturer's directions.

See that the incubator is running steadily at the desired temperature before filling it with eggs. Do not add eggs to a machine during incubation.

Turn the eggs twice daily after the second and through the eighteenth day. Cool the eggs once daily according to the weather, from the seventh through the eighteenth day.

Turn the eggs before caring for the lamp.

Attend to the machine carefully at regular hours.

Keep the lamp and wick clean.

Test the eggs on the seventh and fourteenth days.

Do not open the machine after the eighteenth day until the chickens are hatched.

Eggs saved for hatching purposes should not be subjected to high or low temperatures.

In cold weather place from 10 to 13 eggs under the hen; in warm weather from 13 to 15.

Always test the hen on china or nest eggs before setting.

Given proper care and attention, the hen is the most valuable incubator for the farmer.

Use insect powder freely to exterminate lice when necessary.

February, March and April are the best months for hatching.

If several hens are set in one room, it is desirable to confine them in good nests.

Straw and hay make good nesting material.

Broody hens should be moved to the permanent sitting nest at night.

Whole corn is a good feed for sitting hens. Water, grit, and dust baths should also be provided.

All eggs should be tested by the seventh day, which often makes it possible to reset some of the hens.

Toe-mark the chicks as soon as they are hatched. This enables one to tell their ages later.

Powder the chicks occasionally during the first eight weeks.

Start the brooder a day or two before putting in the chicks to see that the heating apparatus is working properly.

Brooder lamps should be cleaned every day.

A record should be kept of each hatch, showing the date set, number and kind of eggs, number tested out, and the chickens hatched.

Chicks should not receive feed until they are 36 hours old.

In cool weather 10 to 13 chicks are sufficient for one hen, while in warmer weather 15 to 20 can be cared for successfully.

Never mix chicks of different ages.

Confine the hen until the chicks are weaned.

The coop for hen and chicks should be well ventilated, easy to clean, and of sufficient proportions to insure comfort.

The early hatched pullet is the one that begins to lay early in the fall, when eggs are high in price.

The cockerel that can be marketed as a broiler in March or April brings more money than the one marketed in June.

Tough meat or fowl should not be fried or roasted unless parboiled first.

184 Chicks From 187 Fertile Eggs

Mrs. Adolph Denis of Brainerd, Minn., has achieved that success with an X-Ray Incubator. And the 1918 X-Ray Incubator is better than ever. Possesses 20 exclusive features—including X-Ray Gas Arrestor that prevents lamp fumes entering egg-chamber; X-Ray Nursery Tray that assures sanitation—protects chicks; X-Ray Egg Tester, most perfect, handy tester ever conceived; Handy Height; Quick Cooling Egg Tray. All features that make poultry success surer.

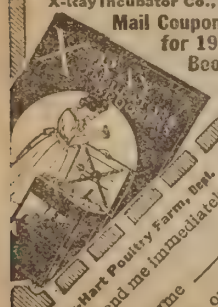
1918 X-RAY INCUBATOR

Needs to be filled only once during the entire hatch. Has X-Ray Automatic Trip that regulates flame and prevents both chilled eggs and overheated sides.

Express Prepaid

Shipped Express Prepaid to Practically all Points.

1918 X-RAY BROODERS



Express Prepaid

Built now with famous X-Ray Duplex Heater, insuring uniform and properly distributed heat. Canopy top that protects chicks against draughts and excessive sunlight.

Somewhere in America

Laying submarine cable, hundreds of miles of it, to scores of isolated lighthouses is one of the telephone tasks made necessary by the war. The Bell System has also built lines connecting some two hundred coast guard stations.

It has built complete telephone systems for fifteen National Army cantonments and fifteen National Guard camps, each a city in size, and also at many naval, officer's reserve, mobilization and embarkation camps and at army and navy stations.

It has provided an enormous increase in long distance facilities throughout the country, that satisfactory service may be maintained between cantonments, training camps, guard outposts, military supply stations, war industries, the National Capital and other centers of Government activity.

The Government facilities at the National Capital have already been increased three-fold and there has been a tremendous increase in local and toll facilities.

Fifteen thousand miles of telephone wire have been taken from other use for the exclusive service of the Government and some 20,000 miles of telegraph facilities also provided.

Meanwhile the Bell System has given generously of its man power, until over seven thousand men are in service or recruited for military duty.

Members of the Bell System whether they have already gone to France or whether they have stayed at their posts to help mobilize the country for victory, are equally in the service of the Nation.

Halifax Destroyed

Munitions Cargo Is Exploded

It is estimated that something like 4000 persons lost their lives in Halifax, Nova Scotia, last week, when a large freight steamer, Mont Blanc, loaded with a cargo of munitions and other explosives, blew up in the harbor. The explosion was caused by an accident in which a smaller vessel collided with the munitions ship. The shock was so great that all the buildings and shipping within a radius of two miles were either totally destroyed or badly damaged. The property loss alone will run into many millions of dollars. Following the destructive explosion fires began burning in scores of places and much of the loss of life was due to them. A large percentage of the loss was due to the stunning violence of the shock. To add to the horrors of the situation a severe blizzard swept the stricken city and surrounding country following the disaster. Aid has been rushed from all directions. The American Red Cross was among the first to respond, supplies, medicines and nurses and doctors being rushed to the city by special train as quickly as possible. Owing to the enormity of the disaster the progress of rescuing injured persons and the bodies of the killed has been slow and it will probably be several days before the exact number of victims will be known. Many were injured, some fatally and some only temporarily. It is reported that the explosion was caused by fire aboard the munitions ship resulting from the collision. It is said that the explosion did not occur until 15 minutes or more after the collisions. In the meantime the crews of the ship in large part retreated to places of greater safety, but many of them lost their lives in like manner as did the residents of the city.

U. S. Vessel Destroyed.

A German submarine last week did the first serious damage yet reported to the United States navy when it torpedoed and sank a U. S. torpedo boat destroyer, the Jacob Jones. It is reported that about 70 lives were lost in the sinking.

The Jacob Jones, one of the largest and newest American submarine chasers of her type operating in the Atlantic, was the first American warship to fall a victim to a German submarine, but was the second American destroyer to be lost in foreign waters. The Chauncey sank with her commander, two other officers and 18 enlisted men, after being cut in two by the transport Rose early on the morning of November 20.

Work Eight Hours.

The Western Pine Manufacturers' association, one of the greatest lumbering organizations in the west, has agreed voluntarily to put into effect in their plants an eight-hour day. This is said to be the first action of this kind ever taken by a lumbering concern in the United States, and follows a movement by the United States department of labor and the council of national defense started with a view to solving in so far as possible the laboring problems affecting the industry. Secretary of Labor William B. Wilson is now in the west, and when the association took the action it did he telegraphed President Wilson, who immediately wired an expression of his appreciation of the agreement. The association has organized within itself what it terms an association for labor efficiency.

The association for labor efficiency, with 16 of the largest lumber companies of western Montana, Idaho and eastern Washington and Oregon as its members, will have at its head an "employing manager expert."

The members of the Western Pine Manufacturers' association, which has its headquarters in Spokane, carry an annual payroll between 25,000 and 30,000 men, according to Secretary A. W. Cooper. Its production is 1,250,000,000 board feet a year, which is slightly less than 3 per cent of the entire output of the nation.

War on Austria.

In another part of this paper is given the address of President Wilson to congress when that body met last week. In that message the president recommended that this country declare war on Austria, the principal ally of Germany. Following that advice, congress, with but one dissenting vote, that of the lone socialist member in the senate, voted that this country should declare a state of war to exist between the two countries. The action was specially recommended by President Wilson in order to permit the vigorous control of Austrians in this country, who will, by the declaration of war, become alien enemies, and can therefore be controlled under military authority.

Can Italy Stand?

The eyes of the world are still on Italy and the gigantic struggle she is making to withstand the invasion of the German armies. It is believed that the Germans are massing their troops on the Italian front with a view to undertaking one of the greatest offensives of the war with a view of crushing that country if possible. As a result, Italy is preparing her utmost for defense, and the allies are rushing what aid is possible to her without weakening other battle lines dangerously.

Farmers in Session

(Continued from page three.)

note, but there was also the note of determination on the part of the farmers to prepare to maintain what advantage war legislation gave them, and to press to a "successful conclusion" the age-long fight for equitable treatment.

Indorsing by unanimous vote the action of the national convention in Arkansas last month, the convention at Pendleton adopted a resolution pledging their loyalty in the following words:

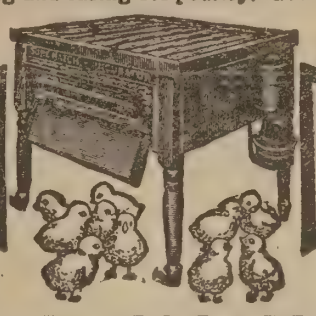
"Resolved, That we pledge the support of our union; we pledge our property, our lives and dedicate our sons to the support of President Wilson for the successful prosecution of the war."

This loyalty extends not only to the giving up of sons to the service of the army and the navy, but to the putting forth of the utmost effort for increased food crop production. There was manifest at the meeting, however, a pronounced sentiment favoring federal ruling whereby labor for the farms of the country might be insured without handicapping the recruiting of the military forces. A resolution was presented urging the exemption of farm laborers, but this aroused opposition on the ground that it would appear unpatriotic on the part of the farmers, and at the same time establish something in the nature of a favored class for exemption. The resolution was finally framed so as to provide not for exemption, but for draft of farm labor to be placed on the farms under government orders instead of being sent into the army.

To Solve the Sack Problem.

The war promises to do what the farmers have been trying to accomplish for many years—solve the sack problem. The demand for grain bags for defense work in the trench fighting in Europe, promises to take the entire supply and leave none for the farmers and they will be forced to handle grain in bulk next year. This is the opinion of men well posted on conditions as they now exist and the prospect for the future. Dr. H. McIntosh of Oregon Agricultural college, sounded a warning to the farmers on Thursday afternoon when he announced that some of the leading importers of grain bags are not handling sacks and will not take contracts for future delivery. Mr. McIntosh stated that what few contracts have been made are at the rate of 19 cents for sacks in 50,000 lots at Portland, for March delivery.

Dr. McPherson gave same interesting statistics on the bulk grain situation in Washington, Oregon and Idaho. He said: "Oregon produces in round numbers, 35,000,000 bushels of wheat, oats and barley and we have 17 elevators with capacity for only 1,250,000 bushels. Idaho has 125 elevators, but I have not their capacity. Washington has 79 elevators. Oregon is far behind and must act quickly in order to handle the crop of 1918."



G. B. Hebgardt, engineer of the port of Portland, also advised farmers to prepare at once to handle their grain in bulk next year. He said the government has already commandeered 60,000,000 sacks for trench building in Europe and it will be next to impossible to secure sacks for grain next year. The price of sacks will be so high that farmers can not afford to buy them, he said, even if they were certain of getting them at any price. Mr. Hebgardt said that the government is cooperating with the farmers in order to help them handle their grain in bulk and had allowed the steel for the new $3,000,000 elevator at Portland to be rushed through to the exclusion of other freight, in order that it may be built in time to handle the crop.

Wives—Here's Your Chance To Make Money Easily

Every married woman who reads this should send for our big catalogue and poultry book **Today**. There are big profits raising poultry, bigger profits than ever, because of war prices for chickens. This book tells you how **you** can make money sure. How to secure valuable poultry feed **cheap**. It's no trouble to raise chickens or ducks or turkeys when you have a **Sure Hatch**. Safe and durable. Lasts for years. Hatches sound, sturdy chicks. Makes big, sure profits. Thousands of wives are getting big independent profits every year with Sure Hatch.

Here is what Mrs. Thomas Tucker of Illinois, says:—"I write you a few words in regard to the Sure Hatch I purchased from you nine years ago. It certainly has been a sure hatch for me and I don't think I can farm without it. I have always had good hatches." We have hundreds of letters like this. Read them in our big catalogue. See how others have made big profits with **Sure Hatch**. You can do as well or better. The big poultry book tells you how. Lots of valuable money making information, all about raising and caring for poultry. Get this book today—sure.

FREIGHT PAID ANYWHERE

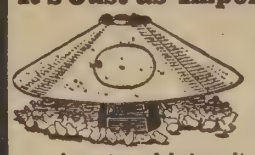
BIG POULTRY BOOK FREE



Strong, Sturdy Chicks Make Money

Nearly $700,000,000 was paid last year to Farmers, Farmers' Wives and Poultry Raisers for Poultry and Eggs. What share of this year's greater amount are you going to get? Get in this big, profitable business **now**. Get in **right**. War is bringing bigger profits in poultry **now** than ever before. Chicken meat must replace all the beef and pork that is being exported. There is a shortage now. Help supply the demand.

300,000 Owners of Sure Hatch—20 Years Experience

Don't waste time and money experimenting. Sure Hatch chicks make money sure because they are strong, sturdy and healthy. The hen herself can't raise better nor anywhere near as many. **Sure Hatch** is easy to operate. The children can take care of it—it's so safe and simple. Will last for years. It will pay for itself many times over in a year. Some wives have made 1000% profit the first year—over ten times the cost of the incubator.

It's Just as Important to Raise Chicks as to Hatch Them

The *Sure Hatch Fresh Air Colony Brooder* raise all Sure Hatch chicks hatched. Self-feeding, self-regulating, simple, safe, enduring. Costs less than 6 cents a day to operate. Saves little chicks from cold, smothering, etc. Raises all Sure Hatch chicks.

Don't Wait—Get Our Big Book Today—FREE

A post card brings it to you promptly. You can see then what others have done—what you can do. Learn how to prepare and secure cheap poultry feed. The Sure Hatch comes to you complete, fully equipped. No extra charges, no freight to pay. Write for the book **today**. It means money for you. It's Free. Mail a post card today.

SURE HATCH INCUBATOR CO. Box 60 **FREMONT, NEBR.**

Trap-Nested Barred Rocks Why?

A low fence holds them.
Their combs do not freeze.
In cold weather less colds and roup and more eggs than small birds.

Our breeding hens have trap-nest records of 160 to 264 eggs in 12 months, averaging 177. At 1917 prices that is over $5 per hen. When the hen is marketed the average price for meat is over $1.

Our breeding males are from dams, granddams and great granddams with trap-nest records of 207 to 264.

MALES. EGGS. BABY CHICKS. WRITE FOR FOLDER.

Succulence

Most Important for Dairy Cows

As winter draws nearer our dairy feeding problems become harder. A good thing to remember at this time is never to get out of green feed. A good dairy cow can make good use of the dry hays and concentrates she is given, but she can make better use of them if she is given some succulent feed in addition.

Such crops as roots, kale, silage, etc., should not be relied upon to furnish all the nutriment the cow needs. The cow can not make much milk on such feed alone because they are too high in water content. But when this sort of feed is given in addition to the regular ration of hay and grain the cow will produce her maximum.

Figure out the number of tons of succulence you will have available between this time and the time your new pasture is ready in the spring. Then calculate how many individual rations of succulence you must supply, by multiplying the number of cows by the number of days you will need to feed, and then apportion the green feed accordingly.

As an example of the above suppose we have 10 cows in the herd and we must feed from December 1 to May 1 approximately 150 days. This requires 1500 daily feeds. Now suppose again that we have only 18 tons of succulence available until our new supply is ready in the spring. The 18 tons is equivalent to 36,000 pounds, and by dividing this by 1500, giving us 24 pounds which is the average daily allowance we should give our cows. This amount is to be varied to suit the individual need of each cow.

The point I wish to make is that it is better to provide a little green feed all the time than to give large portions a part of the time and none at all part of the time. The cow can not do her best work unless she is given this feed of a high water content. Giving her dry hay and then a bucket of water will not answer the purpose. She likes to have the water in its original state.

The cow needs roughage, concentrates, and succulence, and the most important of these is succulence.

A. B. N.

Cow Testing

First Association in Michigan

The first cow-testing association was organized in Newayge county, Michigane, January, 1906, is still in existence and now has 30 herds with a total of 304 cows. The following year three new associations were organized in that state. In 1908 three were organized in Maine and one in New York. The next year five other states entered the list.

Wisconsin now leads in the number of associations, 81 being in operation in that state. Other leading states are Vermont with 47, New York with 43, Iowa and Ohio with 30 each, Minnesota with 26 and Pennsylvania with 24. During the year ended June 30, 1917, 95 new organizations were established.

Yamhill County Records.

Following is the honor roll of Register of Merit cows making 50 pounds or more of fat in the Yamhill County Test association for October:

Poppy's Twin Maiden, owned by Ed Carey, 64.8 lbs.; St. Mawes' Susy, owned by Ed Carey, 63.2 lbs.; Guendola Olga Chimes, owned by Del Perkins, 62.7 lbs.; Goldie's Nehalem Beauty, owned by Reid Stock farm, 56.9 lbs.; St. Mawes Rose, owned by Ed Carey, 54.8 lbs.; Boise Queen, owned by Ed Carey, 54.7 lbs.; Beauty Olga, owned by Del Perkins, 54.1 lbs.; Silver Chimes Rua, owned by Del Perkins, 53.8 lbs.; St. Mawe's Beauty, owned by Ed Carey, 53.8 lbs.; Belle, owned by R. E. Martin, 53 lbs.; Susy's Twin Maiden, owned by Ed Carey, 52.5 lbs.; Lucy of Pleasant View, owned by Ed Carey, 52.2 lbs.; Miss Inez, owned by W. A. Forrest, 50.6 lbs.; Dufrana's Jessie, owned by F. E. Lynn, 50.1 lbs.

Ed Carey and Del Perkins had the two highest producing Register of Merit herds.

There are 28 silos owned by 20 members of the association, only three members being without silos. Only one herd is without a registered sire.

October Milk Prices.

Percy A. Smith, secretary of the Oregon Dairymen's league, has secured from boards of health in several cities the October prices on milk which he says proves that Portland then got better milk for a smaller price than elsewhere. The Portland price is quoted as 10 to 11 cents a quart to consumers. It has since been raised to 12½ cents a quart.

City—	Consumer's Price. Cents.	Butter Fat. Pct.
Spokane	13	3.8
San Francisco	12	3.4
Denver	12	3.3
Seattle	12½	3.7
Detroit	13	3.4
New York	14	3.6
Boston	13	3.3
New Orleans	14	3.6
Cleveland	12	3.4
St. Louis	13	3.5
Pittsburg	13	4.0
Washington, D. C.	14	3.8
Portland	10 to 11	4.0

Stillaquamish Cows.

According to the report of Will W. Henry, official tester of the Stillaquamish Cow Testing association, 469 cows were tested during the month of November with an average of 519.7 pounds of milk per cow and 25.66 pounds of butter fat. The average cost of feed per cow was $5.96. Five cows produced over 50 pounds of butter fat for the month. The highest average was made by a cow owned by Carsten Thomsen, which produced 59.1 pounds. Nine cows were sold for beef last month.

Mr. Henry adds: "The herds where succulent feed is not supplied at this time of the year are practically dry. The only two available succulent feeds are root crops and silage. Most farmers consider it too much work to raise root crops for cow feed, so the only alternative is to build a silo.

Report of Ferndale Association.

Three hundred and ninety-one cows in the Ferndale (Wash.) Cow Testing association were tested during October with the following averages per cow: Milk 681.6 pounds; butterfat 27.63 pounds; feed cost $4.11. Fifty-eight cows gave 1000 pounds of milk or over, 54 cows produced more than 40 pounds of fat and of these, those tested below gave more than 50 pounds of butterfat, according to Victor Morgan, official tester. George Steiner's registered Holstein, Bos Gerber De Kol 2nd, was the highest producing cow for the month. At the time of the association test she had been fresh two and a half months and was giving a daily flow of 95.9 pounds of milk.

Snohomish Cows.

The following cows in the Snohomish Valley (Wash.) Cow Testing association produced over 59 pounds of butterfat during the month of October, according to the report of E. W. Soper, official tester:

Owner of Cow.	Name of Cow.	Lbs. B. F.
G. B. Shadinger	Beauty	56.6
D. Metz	Mary	68.8
D. H. St. John	Julia	58.1
D. H. St. John	Susie	50.4
Herman Steffens	Miss Lyons 2d	51.2
Herman Steffens	Hills Dales	
Herman Steffens	Colantha Ormsby	55.7

Uses of Scrap Leather.

Scrap leather is used for various purposes, including manure, the manufacture of heels, glue, dolls, children's shoes, washers, etc. Sometimes the greases and tanning materials contained in the leather are extracted to be used again. Burnt leather is a material much in demand for use in the "hardening" of metals.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

Reduces Bursal Enlargements, Thickened, Swollen Tissues, Curbs, Filled Tendons, Soreness from Bruises or Strains; stops Spavin Lameness, allays pain. Does not blister, remove the hair or lay up the horse. $2.00 a bottle at druggists or delivered. Book 1 M free.

ABSORBINE, JR., for mankind—an antiseptic liniment for bruises, cuts, wounds, strains, painful, swollen veins or glands. It heals and soothes. $1.00 a bottle at druggists or postpaid. Will tell you more if you write. Made in the U. S. A. by

W. F. YOUNG, P.D.F., 371 Temple St., Springfield, Mass.

Where Disease Shows First

Just watch the milk yield for the first sign of weakening in the cow's system. If your cow is not giving the quantity or quality of milk you expect, it is time to give her medical attention.

For twenty-five years thousands of the most progressive dairymen have used Kow-Kure as their "first aid" when a cow shows signs of "falling off" or coming down with disease. Particularly before and after the calving period, the use of Kow-Kure is valuable. It is a sure preventive of Milk Fever and Retained Afterbirth, and will enable the organs to resist the diseases which frequently originate at this time.

Kow-Kure has a positive action on the genital and digestive organs, toning them up, making them perform properly and helping the system to function as nature intended. Kow-Kure has proven a prompt remedy for Abortion, Barrenness, Scouring, Lost Appetite, Bunches and other common ills.

A small investment will prove the worth of Kow-Kure in your dairy. Put it to a severe test; try it on your poorest milker and watch results. Druggists and feed dealers sell it; 55c and $1.10 packages.

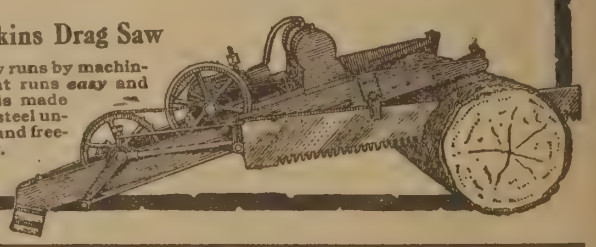
ATKINS SILVER STEEL SAWS

Cross-Cut Saws that cut fast, true and easy

THE ATKINS Cross-Cut Saw is the natural choice of all woodsmen. Its a time saver, labor saver, and a money-maker. Takes a keen edge, stays sharp.

The ATKINS Cross-Cut will make you money because it cuts quicker, more accurately and easier than other cross-cut saws. It will save your time—and the valuable time of your hired hands. Furthermore, an Atkins stays sharper and requires less fitting than other saws.

Buy the BEST cross-cut you can get—an ATKINS—and accomplish more and better work on your timber land or farm.



Try It on *Your* Work—It Will Make Good

Any dealer will take pleasure in explaining the merits of Atkins Silver Steel Cross-Cut Saws. They will save your time, labor and money, and do everything we claim for them. The genuine Atkins Saw *always* has our name on the blade.

E. C. Atkins & Co., Inc.
Makers of Silver Steel Saws
Indianapolis, Indiana

The fast cutting Atkins Drag Saw

Even though a drag saw runs by machinery, you want a saw that runs *easy* and cuts *fast*. The Atkins is made from SILVER STEEL - a steel unequalled for edge holding and freedom from constant fitting.

HIDES

WOOL, PELTS, MOHAIR, CASCARA BARK

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not at inflated values.

LIVE STOCK NOTES

Write to the Editor

E. J. IDDINGS, Editorial Contributor.

Live Stock

American National Association

I. T. Pryor, president, and T. W. Tomlinson, secretary, have issued the call for the 21st annual convention of the American National Live Stock association, to be held at Salt Lake City January 14-16, 1918. The executive committee has extended a cordial invitation to all stockmen to attend this convention. Among the many subjects for consideration are:

Efforts of our government to stimulate the production of live stock, and what live stock producers should do.

Policy of the United States food administration toward the protection of producers.

Effect of the war on the live stock industry.

Better utilization of animal feeds, so as to produce meat animals at a lower cost.

Terms of the federal license of meat packers.

Investigation of the meat industry now being conducted by the federal trade commission.

Work of the bureau of markets in distribution of live stock and meat statistics.

Live stock conditions in foreign countries.

Necessity for an accurate federal census of live stock.

Effect of the drouth in Texas and the southwest.

The cottonseed meal combine, and what steps should be taken by the federal government to regulate the supply and price of cottonseed cake and meal.

Land designations under the 640-acre stock raising homestead bill.

Reservation of driveways and water holes.

Classification and disposition or control of the remaining public land not designated as applicable to filing under the 640-acre law.

Some proposed changes in the grazing regulations on the national forests.

Extermination of predatory wild animals.

Poisonous plants.

Work of the bureau of animal industry in the eradication of ticks.

Inspection of meat, hides and wool from foreign countries.

Importation of live stock from countries where contagious diseases exist.

Protection of live stock owners and ranchmen in Mexico.

Meat inspection laws.

Financing live stock loans.

Proposed advance in railroad rates.

General investigation by the interstate commerce commission of all railroad rates, rules and practices involved in the transportation of live stock, known as docket No. 8436.

Service of railroads.

Shortage of cars.

Report of market committee.

Reports of other standing committees.

The 54th annual convention of the National Wool Growers' association meets in Salt Lake City, Utah, January 17, 18 and 19, 1918, immediately following our convention.

The National Western Stock show will be held in Denver, January 20, to 26, inclusive.

The railroads are arranging to publish for the Salt Lake conventions one and one-third fare for the round trip from practically all points in the west. From Idaho, Nevada, Oregon, Washington, California, points in Utah west of Salt Lake City, and points in Montana routing via Salt Lake City, a fare and one-third has been granted to Salt Lake City.

Veterinary

Dr. S. B. Nelson

Blind Teats—I have two sows that have "blind" teats. I noticed one when quite young. The teats did not seem to develop like the others and the ends close up so they will never give milk. The other I bought from a neighbor. A hard ring forms about her teat, then it undergoes a change and closes up. What is the cuse of this?—W. L. S., Dayton, Ore.

There are two causes of blind or imperforated teats in animals. The one is when the trouble is congelical, when the animal is born with it. The other is due to one of many different types of injury. It depends entirely upon the condition of the teats as to what the treatment may be. Secondly the openings of the teats ascetic conditions and keeping the opening of the teats open for a period of time will overcome the trouble. The only thing that has to be looked after is that the infection is not introduced into the teat, because if it is it will destroy the udder. In the sow I do not believe it is worth trying to remedy. It is too much trouble.

Chronic Metritis.—I have a cow which I have been unable to get with calf. Her last calf is about 20 months old. About 15 months ago the cow ate hay containing weeds which caused her to lose her calf at two or three months. She has a frequent discharge of a thick, white mattery substance.

C. D. M., Oakley, Idaho.

Judging from the sypmtoms that you give, especially the length of time since she lost her previous calf and the fact that she has purulent discharge of the genitive organs I am of the opinion that she has chronic metritis or inflammation of the womb. I do not know if she will yield to treatment or not, but you might try the following: Wash her daily for a few days with a normal salt solution containing one teaspoonful of common salt in one quart of boiling water, and allowed to cool. It will take a number of gallons of this solution in the proportion given to wash her out as she sould be. Then later do this every other day, and between these two days when you use this solution wash her out with a 2 per cent solution of lysol. Later treat her once every three days, and then twice a week, and then possibly once a week until the discharge stops. Let ner go over two periods of heat and watch if the discharge reappears. If not, breed her in the third period of heat.

Pigs Cough—I have some 3-months-old pigs that have a bad cough. I have been feeding milk and shorts and it seems to choke them. They have good, dry straw to sleep in.

B. O., Prosser, Wash.

Stop feeding shorts and use a little bran instead, and then if the pigs are large enough feed them dry rolled grain, either wheat or oats. Give them in their feed about a half teaspoonful to a teaspoonful of castor oil per pig. If you have a number of them divide them into small groups. You may give the castor oil once daily for three or four days.

No Place to Go.

Madge—"Why didn't you go into the conservatory with Jack?"

Marjorie—"That's no place to go during the mistletoe season. The acoustic properties are such that there is a dreadful echo."—The People's Home Journal.

HOG MARKET FACTS.

Pays to Study Feed and Fitting.

One of the most instructive and interesting exhibits shown at the International at North Portland was found in a tent devoted to the runovers for swine and horses. It was prepared by the Oregon Agricultural college, the Portland Union Stockyards company and the Union Meat company, and consisted of 14 pens of hogs.

First came three lots of nine pigs each, shapely animals which had been fed on different rations for 40 days. The following table was prepared from the placards and tells the story of the three pens:

	Total Feed, Lbs.	Combined Weight, Lbs.	Gain, Lbs.
Lot 1—			
Barley	1268	....	...
Middlings	634	1200	397
Lot 2—			
Barley	1388	....	...
Middlings	694	1350	538
Buttermilk (gals.)	148½	....	...
Lot 3—			
Barley	1196	....	...
Middlings	539	1275	506
Garbage (Gals.)	323½	....	...

All the pigs were good in shape and healthy, even animals. A knowledge of the cost of feed in any locality would make this data of particular value.

The rest of the pens in the exhibit were devoted to different grades of marketable hogs. The three lots were composed of Durocs, but the rest were made up of all breeds and in the lower classes of some of doubtful ancestry. Each pen illustrated the grades of hogs coming to market in the yards, their weight individually for the classes, their estimated percentage of dressing and the prices each day of the week of the show. It was easy to see the difference in quality, going from pen to pen, and the whole was a splendid object lesson in the worth of fitting hogs for the demands of trade. Following are the legends over each pen in the order in which they were arranged:

(1) Good feeder hogs; weight, 124 pounds; estimated to dress out 65 per cent; Monday's price, $14.50 per hundred.

(2) Skips; weight, 60 pounds; estimated to dress out 69 per cent; Monday's price, $13.

(3) Common pigs; weight, 126 pounds; estimated to dress out 71 per cent; Monday's price, $14.

(4) Good pigs; weight, 146 pounds; estimated to dress out 74 per cent; Monday's price, $14.50.

(5) Rough heavy; weight 410 pounds; estimated to dress out 76 per cent; Monday's price, $15.25.

(6) Common light; weight, 180 pounds; estimated to dress out 72 per cent; Monday's price, $16.

(7) Good light; weight, 193 pounds; estimated to dress out 75 per cent; Monday's price, $16.25.

(8) Prime light; weight 233 pounds; estimated to dress out 78 per cent; Monday's price, $16.50.

(9) Common heavy; weight, 277 pounds; estimated to dress out 76 per cent; Monday's price, $16.25.

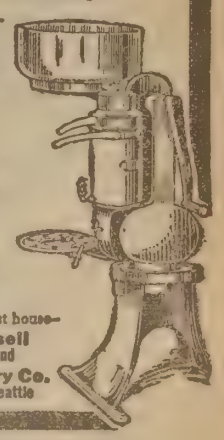
(10) Good heavy; weight, 313 pounds; estimated to dress out 77 per cent; Monday's price, $16.40.

(11) Prime heavy; weight, 316 pounds; estimated to dress out 80 per cent; Monday's price, $16.60.

While prices varied and the top demanded on different sorts varied slightly during the week, these figures showed the need of studying the markets closely and also to value of careful fitting and feeding preparatory to marketing.

The LINK BLADE does it!

For years others have tried to invent something that would equal the link-blade idea. It still holds world-record for close-skimming.



THE NEW SIMPLEX LINK BLADE SEPARATOR

The link-blade is all in one piece. Cuts out many needless parts--easy to clean and keep in order.

10 Days FREE Trial—Send No Money!

To prove our confidence in this Separator we will ship you a new 1917 Simplex. Use it 10 days. No obligation or cost incurred. If you do not say it beats all other separators, return at our expense.

A Postal also brings new FREE Separator Book.

Shortage of Cars

We have "Hooverized," economized, studied the best plans for producing the greatest amount of food with the least amount of labor, in order to have enough for ourselves, our boys in the trenches and our allies. Now, after all this is done, if the process should break down at the point of transportation, it would be a calamity that would greatly discourage the farmers in the effort to produce large crops next year. I do not wish to complain. I believe if the men who are at the heads of departments in our government know the facts, they will do everything possible to relieve the situation. The fact is there are several thousand cars of apples stored in warehouses in this northwest country that can not be moved. The farmers need the money. The same thing is true in regard to other farm products.

We have been suddenly confronted with unusual conditions, and we were not prepared to meet them. The railroad companies seem to be doing all they can. In some cases we have been held up by bad labor conditions. We have a class of persons in this country who will not work, nor if they can prevent it, will they allow others to work. The government will have to take the management of affairs with a strong hand. It will have to impress idlers into the ranks of workers. It will have to punish food destroyers as never before. It will have to clear the tracks of all obstructions and obstructors. We will have to produce more, and when it is produced it must be shipped.

G. L.

OLDER ORCHARD

Do You Feed or Starve the Trees?

The older orchardists of the northwest are facing the proposition of feeding or starving their trees, in the fact that many orchards are producing small fruit, whereas they formerly produced large, beautiful, highly profitable grades. The remedy is heavy feeding. Of course pruning has its place, but feeding is the principal, because the difficulty originates in lack of proper plant food.

A few years ago Professor Hopkins of the University of Illinois engaged in a controversy with the government soil specialists on the question of the productivity of the soil of Illinois. The government specialists claimed that there were chemical qualities in the soils of that state, sufficient to produce a good crop of corn each and every year for 100 to 300 years.

Professor Hopkins claimed that as a matter of experience the best soils of the state would not without fertilization of the soil or a rotation of crops produce a profiable corn yeald for more than 20 years.

A Natural Law.

It is a law that runs through all nature that you can not continuously take from, without adding to, unless you exhaust the substance or thing from which you are subtracting. The woman who wrote an essay to be read before a woman's club on "How to Make a Husband Happy," and embodied it in the three words "Feed the Brute," had the right philosophy. No dairyman would think of a profitable yield of milk from his cows without feeding them. Yet some of us are not feeding our orchards, and wonder why they ahe producing small fruit. In this we are like the old man in Kansas of whom the story is told that, during the hard times of 1893, gathered around a stove, with some of his neighbors, in a grocery store of the little town in which they lived, and discussed how they would get through the winter. This man had it all figured out. He said he had a Jersey cow that gave an abundance of very rich milk. He thought that after using what he and his family needed that they could sell milk enough to the neighbors to buy meal, flour and other necessaries of life. Some one ventured to say, "But where will you get feed for the cow?" "Oh," said he "that cow sucks herself." Now, that is exactly what we are expecting our orchards to do; that is, we expect them to supply from their own resources the fruit necessary to supply us, to enable us to sell to the markets enough to buy the other things we need, and at the same time to supply themselves with the necessary food from which to manufacture what we consume.

The Surplus Supply.

Of course it is true that there is a surplsu supply in all organisms, more than is needed for immediate use. The animal has stored enough to tide it over for several days without food. The plant has enough, in some cases, to enable it to survive for a longer period. The earth is a storage reservoir of greater capacity, but in each and every case the same law prevails. It is by observing the laws under which we are placed that we can succeed, whereas failing to observe them spells failure.

G. L.

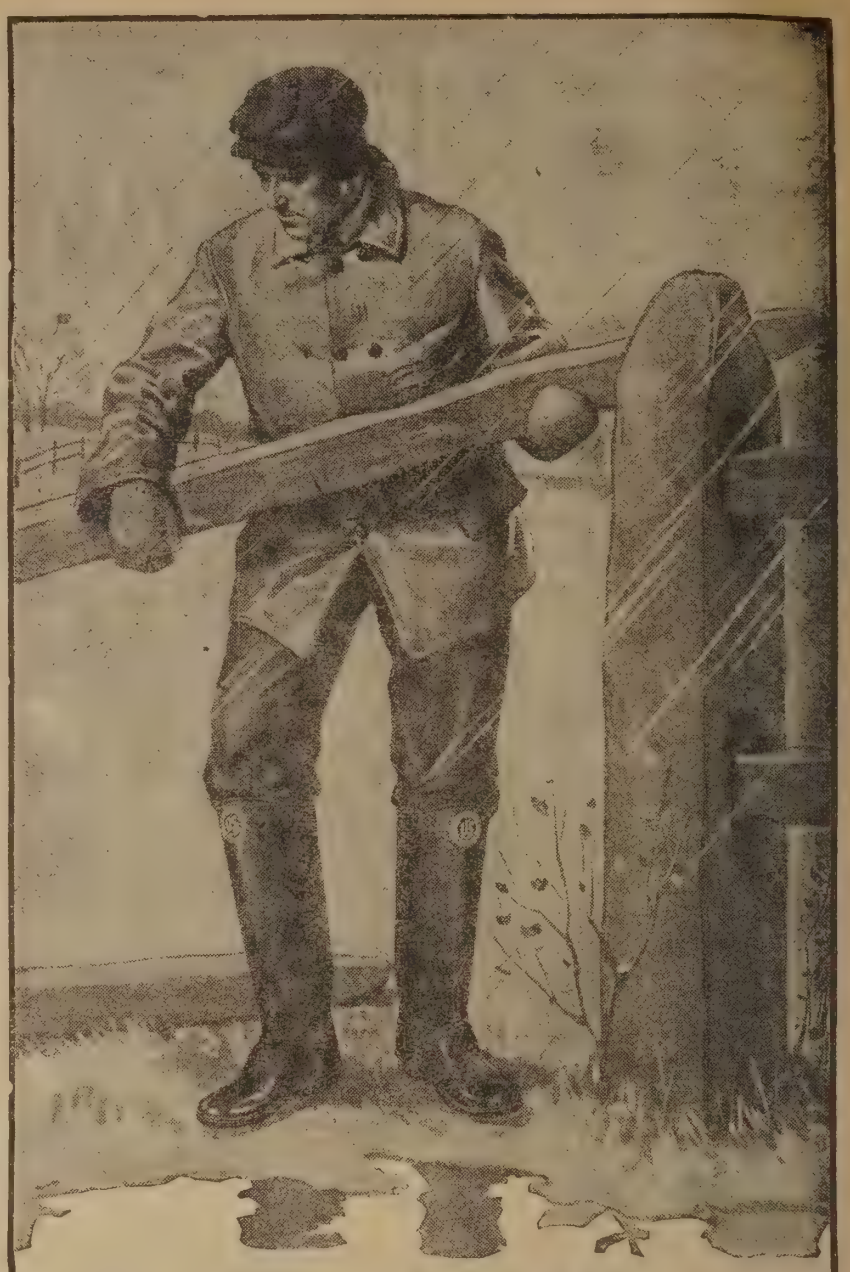
Apples in Storage

This year there has been an unusual effort to get the apples off the trees, out of the orchards and into the warehouses before the cold weather began. The experiences of last year, when so many apples were frozen taught us the necessity of some kind of storage as a protection from the freezing of late fall and early winter Hundreds of farmers prepared storage plants for the protection of small amounts of fruits, and finding that there was car shortage, and that the buyers and commission companies had stored all they had capacity to store, they have overcrowded their cellars, and have not sufficiently ventilated them. There is, therefore, danger of a rapid process of ripening, and the beginnings of decay at a period when the apples are passing through what is called "the sweat." We had Winesaps in common storage last year, that before we put them away, were frozen through. We used the last of them in July and they seemed to have kept as well as some we had stored under like conditions, but had not been frozen.

G. L.

Codling Moth in Buildings.

Every observant orchardist knows that codling moths are more difficult to control in the more thickly populated portions of the country than in the more sparsely settled sections. It was formerly supposed by many persons that certain sections were immune from its ravages, but this theory is now exploded, and it is generally known that the moth destroys annually in the larger fruit growing sections anywhere from 1 per cent to 60 per cent of the apples. The per cent depends largely upon the manner of spraying. Some of our neighbors in the Yakima valley, in tearing down old buildings, have discovered hundreds of codling moth larva in which form they pass the winter, protected in the cracks, crevices and wherever they could hide away. Others have discovered them in their dwellings, barns, sheds, outhouses, etc.



It is evident, then, that the more thickly an orchard section is populated the more hiding places the moth will find, and that in these sections the fight for control will be the hardest. I do not mean to suggest that there are difficulties here that can not be overcome, but that in overcoming them we will have to give the matter due attention and spray with more care.

My Father's Help To The Farmer!

In a little settlement of pioneers, called Maria Stein, Ohio many years ago, Joseph Oppenheim, my father, was the teacher. Studious and quiet, he yet had a personality that appealed, for he was helpful to all. Farming then wasn't so profitable as now, and the women and children had to work in the fields.

The Settlers who came to this country generations back were frugal people. They had to be. Yet they were far-sighted, too. They knew that land could be exhausted—they knew it must be fed if it was to continue feeding them. So they wasted little fertilizer. Barnyard manure was their reliance—as it is yet.

Hence it was scattered on the fields with great care. My father made a hand in this labor occasionally. The children from his school bent weary backs over the task. Their drudgery appealed to his heart. He knew what it meant in aching muscles, neglected schooling and dwarfed opportunity. He knew that such machines as were available neither shredded the manure nor spread it fine and wide.

So he set out to build a machine that would do this and save the hard work. It wasn't easy. Money was scarcer than this generation understands. In his little school house he worked out the idea he had — to make a machine that would help keep his boys and girls in school, and ease the labor of their parents.

It's a long story of how the village teacher saved a nickel here and a dime there, worked early mornings and late nights and eventually built a spreader that carried the principles that make the Nisco the leader today.

So much better was it than the old method of wagon tail distribution that the sturdy farmers called it "Oppenheim's New Idea." After a while, when the work had been brought to a practical stage, we called ourselves the New Idea Spreader Company and from this we get "Nisco."

Working out this idea to perfection in the midst of poverty cost great sacrifice and much toil, but ever uppermost in the mind of the inventor was the need of his people. The small shed shown above was built and work started on six machines. They were so practical that he protected the child of his brain by patents, patents that have revolutionized the spreader industry.

How this small plant has grown until ten acres are covered by the present plant, which sold over two million dollars' worth of spreaders last year, is a story my father could hardly believe if he were alive today to hear it.

But his big heart would swell with pride that he had made so great a contribution to American agriculture — that his efforts had brought prosperity and ease not only to his little circle of friends, but to many thousands more.

He lived only to see the business begun. At his death it fell to me — a boy of fifteen — to carry out his plans. My mother put every cent of her little insurance into making it go — and the Nisco was so valuable to the farmer that today he recognizes the Nisco Spreader as the greatest aid to permanent fertility of his fields.

Because this business is an inheritance of the brave effort of my father to contribute something worth while, it is equally dear to me. And because of his ideal, this machine never will be less than the best we can build.

Our catalog tells of its superiority better than we can here and our free book "Helping Mother Nature" gives some new and valuable information on the use of manure. Send the coupon for them today and see how Joseph Oppenheim made the most notable contribution of his generation to the American farmer. See the machine at the Nisco dealer's in your vicinity. If you don't know him we'll send you his name.

Share Your Christmas With Our Soldiers Through the Red Cross

Washington's boys in khaki are now in France fighting for democracy and humanity. The next few months will see thousands more standing side by side with them in the trenches.

Now that we have sent our boys to France we must take care of them by sending our dollars to give them the life-saving aid of the Red Cross.

Realizing the tremendous relief work that must follow the advance of our armies, our great president, Woodrow Wilson, head of the National Red Cross, has asked that ten million new members be added before Christmas.

This Means That Every Man, Woman and Child in the State of Washington Must Join the Red Cross Before Xmas Day

It is impossible for the patriotic men and women who are devoting their time to this work to reach every home in this state in this limited time. America's wounded soldiers must have bandages and medical aid. Help send it to them through the Red Cross.

Don't Wait to Be Asked—Ask Yourself

You men and women of the farms must do your part. Don't wait till some one asks you. Send in your dollars today—one dollar for each member of your family.

Sign this Coupon Today—Save Our Boys

Fill out the coupon below and send it today with a dollar for each member of your family. The money that you send will be credited to the chapter of the Red Cross nearest you.

MACJUNK IS INSTRUCTED TO BECOME A MOTORMAN

MUGGSY GETS A FIVE-SPOT FOR PLAYING SNAP-THE-WHIP

JAMES DRYDEN
Editorial Contributor

Fight the bad Hun with the good hen.

The slacker hen is an ally of the Hun.

Do not feed high priced grain to slacker hens.

The poultry will help win the war if given good care.

Lameness in Chickens

A correspondent, referring to a former article in The Farmer, in which lameness in chickens was under discussion, writes:

"This interested me very much, as I have asked myself the same question many times over when I had that trouble with hens. I tried many things, but nothing helped, so I finally decided to try carbolic acid, 'kill or cure,' and it cured them. Since then I have tried it many times and have not had a single hen die with that trouble. I took a piece of bread, the size of a hazel nut, made a pill and put one drop of carbolic acid on that, then made her swallow it. When they are very bad I would give that pill morning and evening for two days, the third day once, which usually did the work. Now I would like very much for this Idaho party to try this and all I ask in return is to let me know whether this helped his hens."

There is nothing in poultry literature that I know of that would corroborate this treatment. That may not prove, of course, that the treatment is not effective, because poultry literature, and especially poultry doctor books, do not tell us everything. Lameness, however, may result from various causes. Tuberculosis of the joints, rheumatism and bumble foot cause lameness and the same treatment would hardly cure them all, if indeed it would cure any one of them. We wonder if the cure reported by this correspondent was not a coincidence rather than a rtsult of the carbolic acid treatment?

Individuality in Birds.

In selecting a pen of fowls for egg and meat production, there are several points to be considered, outside of the question of breed, says Professor James Dryden in a bulletin issued by the O. A. C. The most important is the health and vitality of the fowls. The greatest problem in poultry raising is to keep up the strength and vigor of the stock. Some of the principal things that produce weakness in the fowls are inbreeding, breeding from fowls that lack in health and vitality; improper incubation and brooding; unsuitable housing; too close confinement; unclean houses and yards; lack of proper food. Constitutional weakness is shown in various ways. Small size, lack of breadth and depth of body, thin, wabbly legs and knock-knees and shallow breast usually indicate lack of vigor. As to size it is a safe plan not to use any pure-breds that do not come up to standard weights. A chicken may be pure-bred and lack in some of these things. It doesn't necessarily follow that because a chicken is pure-bred it is profitable to keep. In purchasing be careful to select fowls having vigor, alertness and size.

Good and poor types of chickens. The one on the right lacks vigor and market qualities as well as beauty.

The Supply of Poultry

Speaking of the market for storage poultry, a report from the Canadian government poultry division says: "It is evident now that considerable stock will have to be carried over to next year." It says further: "Holders of storage poultry in the states are still holding out hope that the government will take large stocks for army services, but this is questionable, and it looks now as if a large block will be carried over to next year."

The amount of poultry in cold storage has been unusually large. Storage operators anticipated a great demand for poultry, but they apparently overshot the mark and prices have not been satisfactory to them. The trouble has probably been that there has been little or no export demand on account of lack of shipping space.

The food administration is advising the eating of more chickens and the saving of red meat—beef, pork, mutton. This has resulted in an unusual demand for poultry and but for the large storage stocks prices would be no doubt considerably higher than they now are. This is the season in normal times of lowest prices for poultry, but the prices are abnormally high this fall in fact, as high as they were in the spring, the normal season of high prices.

It will be recalled that broilers sold in the spring at a lower price than for several years before, and it looked as though the poultry market had gone to pieces. Instead of going lower in the summer and fall the prices have kept up and farmers are able to sell any chickens that they have kept over at a higher price than in any previous year.

There is no use in prophesying what the prices will be during winter and spring. We do not know what the war or the food administration will bring forth, but following natural causes we would expect the prices to be unprecedentedly high in the coming winter and spring. J. D.

Poultry Business or War

A subscriber writes that he would like to engage in the chicken business. He has a piece of land especially adapted to the business, but if he should start in on the scale that he thinks would make him a living, and he should be drafted into the army, he would lose his home He is of the draft age, and asks if we would advise him to go on with his plans.

That is a question that no poultryman can answer. He should study the new regulations as to draft. The new regulations provide, I understand, that a married man whose wife or family is dependent upon him for support will be exempt, at least in the first draft. The chances are he would not be called upon very soon. The fact that he was engaged in the poultry business might not have much weight with the exemption board since he started in it only recently. Under the circumstances it would be the safe plan not to make any large investment so long as he is subject to draft. J. D.

Water Dogs and Hawk Pests.

To the Editor: Would like to know if you could give me some advice against having chickens killed by eating water dogs. Today one of my chickens was very lame when I found it and it soon started to have convulsions almost like fits and I saw it would die anyhow so I killed it. Upon examining it I found the lizard or water dog in its gizzard. Would it be dangerous to eat it when it is killed as soon as noticed? Would also like to know if you can kill hawks by feeding small chicks poison like Nux Vomica? Do you think it would be effective? Would the poison not hurt the chicks or hens? E. T. S.

Yoncalla, Ore.

A considerable number of chickens are killed by water dogs, otherwise known as lizzards, in western Oregon where they are numerous. They are usually found in the timber and along the creeks. I know of no way to prevent the chickens eating them nor any cure for the chicken eating them. I have found that where fowls were put on to new ground where the lizzards were plentiful there was quite a large mortality. After two or three years there were practically no losses from this cause, there being two or three hundred chickens per acre of ground. The reason there were no further losses was probably because the chickens had cleaned up the water dogs or those of large size and any small ones would not cause death. Large Plymouth Rock roosters were often killed and the death was probably due to strangulation, the bird being unable to swallow it. The lizzard excretes a poison, and it is possible that this poison may cause death, but there are no authoritative data on this point.

It should not be dangerous to eat the fowl if killed when the first symptoms were noticed.

The killing of hawks by eating small chickens that had been fed poison in small quantities is an idea that I have not seen tried. To kill the hawk I would imagine that the chick itself would have to swallow a fatal amount of poison. That is another suggestion for an experiment. It might pay to have a "poison squad" of chickens where hawks are bad. The poultryman could afford to sacrifice one chicken for a hawk.

Has any one had any experience in poisoning hawks? If so, let our readers have the benefit of it. J. D.

FARM WOMEN WELCOME OUR SUBSCRIPTION PROPOSITION

OUR plan for saving money for our readers by handling subscription orders, so far as possible, without the aid of agents has met with the hearty approval of our lady friends on the farms of this state.

The women as well as the men appreciate a good bargain; and this new subscription plan certainly puts an extraordinary bargain within reach of every one.

With the help of our readers we have been able to reduce our force of agents materially. This means marked economies in items like salaries, railroad fares, hotel bills and incidental expenses; and subscribers are given the benefit of every dollar saved. The result is a subscription offer of 25 cents for one year; 50 cents for three years; $1 for five years.

In making the plan a success we are depending on the cooperation of our readers. Let your neighbors know how much you enjoy reading your state farm paper and how cheaply they can secure it under the present plan. Our lady friends can help this cooperative arrangement immensely by passing along an occasional copy of the paper and by mentioning the reduced rates.

The "Farmer" is edited for the women as much as for the men, proof of which will readily be found in such features as the pattern department, crochet designs, stories, household hints, recipes, etc.

Rates Made Possible by Dealing Direct

25c for one year's subscription to THE WASHINGTON FARMER.

50c for three years' subscription to THE WASHINGTON FARMER.

$1. for five years' subscription to THE WASHINGTON FARMER.

Your Remittance May Be in Any Form Most Convenient—Silver, Stamps, Personal Check, Postal Money Order, Express Money Order or Bank Draft

Dec. 13.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for .....years subscription.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

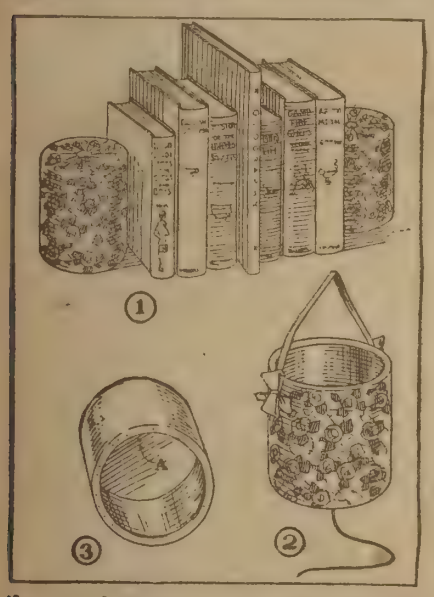
UNLUCKY LOOIE HAS ANOTHER PAYDAY

Handicraft For Girls

By Dorothy Perkins.



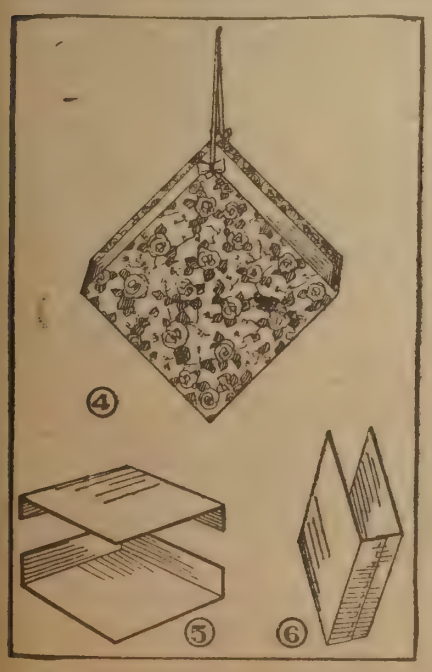
Dainty gifts covered in cretonne are certain to find a welcome in any household, and such a variety of things can be made that you will have no difficulty in filling a want of each one whom you wish to remember on Christmas day.

Book Ends, Twine Holder.

The unique pair of book ends in Fig. 1 are made of sirup cans. The secret of making satisfactory book ends is to properly weigh them so they will not upset, and the book ends illustrated are weighted by filling the cans with sand.

Cretonne with small patterns is the most desirable for small articles, and patterns with dark backgrounds are preferable for articles such as the book ends, which are likely to soil through much handling. Sew a piece of cretonne around the sides of each can, then by means of a gathering string gather the cloth as indicated in Fig. 1. Sew a fancy button, or a cretonne covered button, to the center of the top.

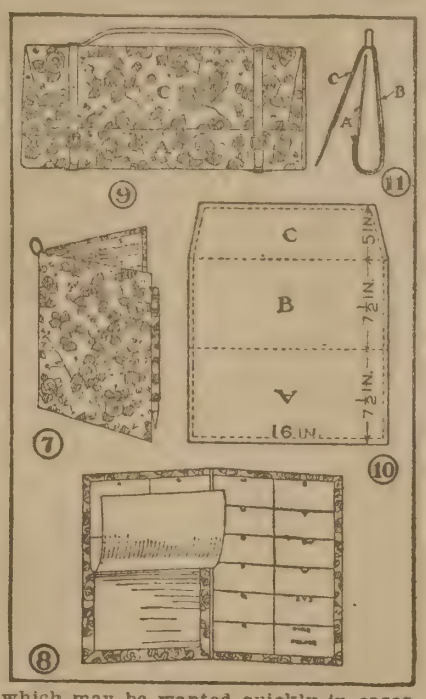
Fig. 2 shows a handy twine holder made of a sirup can. A hole must be pierced through the exact center of



the can bottom as an outlet for the string (A, Fig. 3), and holes one-half inch apart must be pierced through the top rim to provide a means of fastening the top edge of the cretonne. The holes can be perforated by means of a nail and hammer. Gather the cretonne on the bottom, and turn the top edge over the rim and sew through the perforations in the rim.

Make a hanger for the twine holder out of cretonne or ribbon.

Hanging Workbox.



The hanging workbox in Fig. 4 requires a square cardboard box. Remove two adjacent sides of both the box and cover (Fig. 5), then stitch

the cover to the box (Fig. 6). The cretonne may either be stitched over the open edges of the box, or be glued to the cardboard. Sew a double strip of cretonne, or a ribbon, to the open corners for a hanger.

Telephone Book and Music Case.

The dainty telephone book in Fig. 7 provides a handy directory for numbers used frequently, and numbers

which may be wanted quickly in cases of emergency. The covers are of cardboard 6 inches wide and 8 inches long, and are hinged together by the cretonne covering. Lap the cretonne over the edges as indicated in Fig. 8, and glue it to the cardboard, and make a pocket on one edge, to hold a pencil. Cut sheets of writing paper of the right size to extend a trifle over the lapped edges of the cretonne, and glue them in place; then divide the paper into spaces ,and index the spaces (Fig. 8). A fancy work ring provides a hanger.

The music case in Fig. 9 has a canvas foundation cut of the dimensions shown in Fig. 10. The dotted lines around the edges of this diagram indicate how the edges of the cretonne covering turn over, and the dotted lines each side of the portion marked B indicate where portion A turns up and portion C turns down, to close the case (Figs. 9 and 11). A pair of buckles, with cretonne straps to pass around the case, and a cretonne handle, will complete the music case.

(Copyright, 1915, by A. Neely Hall.)

The Poultry Industry

(Continued from page one.)

Probably there must be further advances in the price of all poultry products, but these advances must be prepared for. It is not enough that the poultryman knows the justice of his position. He must tell those who consume his wares what he knows. That vague creature, the "public," is short sighted but not intrinsically selfish. Public opinion, when properly enlightened by knowledge, may be unfalteringly trusted to back the cause of justice, even at a personal sacrifice. If every poultry producing community in the country were to send a committee to all the available newspaper offices, and through this medium were to put the case squarely before the editors, with the offer to furnish figures and facts for a straightforward educational campaign, the ultimate effect would be tremendous. The average editor knows nothing about the cost of producing food. He simply knows that it costs him twice as much to live as it did a few years ago, and perhaps he is human enough to throw the blame for the condition on the only party who has nothing to say for himself, the producer. It is up to the producer to state his own case.

Here, then, are three things which can be done: First, save labor; second, save wheat; third, help educate the buyers of your goods. And, finally, remember that all things and conditions have an end, and that a time is inevitably coming when the relative value of feed and farm animals will be reversed; when the only profitable way to sell grain will again be as a finished product. When that time comes, the man who stayed with the business through its darkest hours and who has thereby kept his flock intact, will begin to profit by his grit and resourcefulness.

PAUL E. TRIEM.

"Splendid Lubricating Qualities"

PAIGE
McKinney-Cord Motor Co., Phoenix
"we cannot speak too highly of the splendid lubricating qualities of Zerolene."

WINTON
The Winton Co., San Francisco
"We use Zerolene extensively. It is giving entire satisfaction."

Downright Dependability

Built right into this remarkable little Orchard and Vineyard Tractor

Get This Tractor Book

No orchardist or vineyardist should buy any tractor until he reads the Bean TrackPULL Tractor Book. It tells all about a wonderful 3100-pound tractor that

Pulls instead of pushes itself over the ground
Can be "gee-ed" and "haw-ed" out of holes and soft places like a team.
Has full-power pull on turns as well as on the straight-away.
Turns clear around in a 10-foot circle (5-foot radius).
Plows or harrows as close up in the corners of a field as a team.
Plows as close to vines and trees as a team.
Makes little difference how far off center you hitch.
Goes under branches of trees that no team can get under.
Runs stationery machinery up to 10 H.P. when not plowing.
Weighs less and costs less to run than wheel-type tractors of same power.
Pays for itself in what it saves.
Cultivates 10 to 15 acres in 10 hours.
Plows from 4 to 7 acres in 10 hours.

BEAN TrackPULL Tractor

And this tractor is built by the Bean Spray Pump Co., makers of the famous Bean Spray Pump. That means it is a tested reliable tractor and is in successful operation on hundreds of farms. Send the coupon now for the Tractor Book and note all that this tractor does. Price now $1215. Prices may advance without notice due to steadily increasing cost of materials. Order now at the present price for delivery later. Send the coupon for the Book. Make sure of your tractor.

Bean Spray Pump Co.

President Wilson Pleads Humanity's Cause

Great Address Is Delivered to Congress, Setting Forth the Aims of This Country in the War

A definite statement to the world of America's war aims and of the basis upon which peace will be considered was made on Tuesday by President Wilson in his address to congress, in which he urged an immediate declaration of a state of war between the United States and Austria-Hungary.

Speaking for the American people, President Wilson emphasized two points: First, that this intolerable thing of which the masters of Germany have shown us the ugly face, this menace of combined intrigue and force which we now see so clearly as the German power, a thing without conscience or honor or capacity for covenanted peace, must be crushed, and if it be not utterly brought to an end, at least shut out from the friendly intercourse of the nations; and, second, that when this thing and its power are indeed defeated and the time comes that we can discuss peace—when the German people have spokesmen whose word we can believe and when those spokesmen are ready in the name of their people to accept the common judgment of the nations as to what shall henceforth be the bases of law and of covenant for the life of the world—we shall be willing and glad to pay the full price for peace, and pay it ungrudgingly.

We know what that price will be. It will be full, impartial justice—justice done at every point and to every nation the final settlement must affect, our enemies as well as our friends.

Victory Without Spoils.

You catch, with me, the voices of humanity that are in the air. They grow daily more audible, more articulate, more persuasive, and they come from the hearts of men everywhere.

They insist that the war shall not end in vindictive action of any kind; that no nation or people shall be robbed or punished because the irresponsible rulers of a single country have themselves done deep and abominable wrong.

It is this thought that has been expressed in the formula, "no annexation, no contributions, no punitive indemnities." Just because this crude formula expresses the instinctive judgment as to right of plain men everywhere it has been made diligent use of by the masters of German intrigue to lead the people of Russia astray and the people of every other country their agents could reach in order that a premature peace might be brought about before autocracy has been taught its final and convincing lesson and the people of the world put in control of their own destinies.

But the fact that a wrong use has been made of a just idea is no reason why a right use should not be made of it. It ought to be brought under the patronage of its real friends. Let it be said again that autocracy must first be shown the utter futility of its claims to power or leadership in the modern world.

Justice Demands Victory.

It is impossible to apply any standard of justice so long as such forces are unchecked and undefeated as the present masters of Germany command. Not until that has been done can right be set up as arbiter and peacemaker among the nations.

But when that has been done—as, God willing, it assuredly will be—we shall at last be free to do an unprecedented thing and this is the time to avow our purposes to do it. We shall be free to base peace on generosity and justice, to the exclusion of all selfish claims to advantage even on the part of the victors.

Let there be no misunderstanding. Our present and immediate task is to win the war and nothing shall turn us aside from it until it is accomplished. Every power and resource we possess, whether of men, of money or of materials, is being devoted and will continue to be devoted to that purpose until it is achieved.

Those who desire to bring peace about before that purpose is achieved, I counsel to carry their advice elsewhere. We will not entertain it.

Germans Must Admit Wrongs.

We shall regard the war as won only when the German people say to us, through properly accredited representatives, that they are ready to agree to a settlement based upon justice and the reparation of the wrongs their rulers have done.

They have done a wrong to Belgium which must be repaired. They have established a power over other lands and peoples than their own—over the great empire of Austria-Hungary, over hitherto free Balkan states, over Turkey and within Asia—which must be relinquished.

Germany's success by skill, by industry, by knowledge, by enterprise, we did not grudge or oppose, but admired rather. She had built up for herself a real empire of trade and influence, secured by the peace of the world.

We were content to abide the rivalries of men, science and commerce that were involved for us in her success and stand or fall as we had or did not have the brains and the initiative to surpass her. But at the moment when she had conspicuously won her triumphs of peace she threw them away to establish in their stead what the world will no longer permit to be established, military and political domination by arms, by which to oust where she could not excel the rivals she most feared and hated.

The peace we make must remedy that wrong. It must deliver the once fair lands and happy peoples of Belgium and northern France from the Prussian conquest and the Prussian menace, but it must also deliver the peoples of Austria-Hungary, the peoples of the Balkans and the people of Turkey, alike in Europe and in Asia, from the impudent and alien domination of the Prussian military and commercial autocracy.

Will Not Dictate to Nations.

We owe it, however, to ourselves to say that we do not wish in any way to impair or to rearrange the Austro-Hungarian empire. It is no affair of ours what they do with their own life, either industrially or politically.

We do not purpose or desire to dictate to them in any way. We only desire to see that their affairs are left in their own hands, in all matters, great or small.

We shall hope to secure for the peoples of the Balkan peninsula and for the people of the Turkish empire the right and opportunity to make their own lives safe, their own fortunes secure against oppression or injustice and from the dictation of foreign courts or parties.

And our attitude and purpose with regard to Germany herself are of a like kind. We intend no wrong against the German empire, no interference with her internal affairs. We should deem either the one or the other absolutely unjustifiable, absolutely contrary to the principles we have professed to live by and to hold most sacred throughout our life as a nation.

War of Emancipation.

The people of Germany are being told by the men whom they now permit to deceive them and to act as their masters, that they are fighting for the very life and existence of their empire, a war of desperate self-defense against deliberate aggression. Nothing could be more grossly or wantonly false, and we must seek by the utmost openness and candor as to our real aims to convince them of its falseness.

We are in fact fighting for their emancipation from fear, along with our own, from the fear as well as from the fact of unjust attack by neighbors or rivals or schemers after world empire. No one is threatening the existence or the independence or the peaceful enterprise of the German empire.

Other important topics treated in the address of the president were:

The wrongs, the very deep wrongs, committed in this war will have to be righted. That, of course. But they can not and must not be righted by the commission of similar wrongs against Germany and her allies.

The thought of the plain people here and everywhere throughout the world, the people who enjoy no privilege and have very simple and unsophisticated standards of right and wrong, is the air all governments must henceforth breathe if they would live. It is in the full disclosing light of that thought that all policies must be conceived and executed in this midday hour of the world's life.

German rulers have been able to upset the peace of the world only because the German people were not suffered under their tutelage to seek the comradeship of the other peoples of the world, either in thought or in purpose. They were allowed to have no opinion of their own which might be set up as a rule of conduct for those who exercised authority over them. But the congress that concludes this war will feel the full strength of the tides that run now in the hearts and consciences of free men everywhere. Its conclusions will run with those tides.

The Russian people have been poisoned by the very same falsehoods that have kept the German people in the dark and the poison has been administered by the very same hands.

The only possible antidote is the truth. It can not be uttered too plainly or too often.

From every point of view, therefore, it has seemed to be my duty to speak these declarations of purpose, to add these specific interpretations to what I took the liberty of saying to the senate in January.

Must Be Permanent Peace.

Our entrance into the war has not altered our attitude toward the settlement that must come when it is over. When I said in January that the nations of the world were entitled not only to free pathways upon the sea, but also to assured and unmolested access to those pathways, I was thinking, and I am thinking now, not of the smaller and weaker nations alone, which need our countenance and support, but also of the great and powerful nations, and of our present enemies as well as our present associates in the war.

I was thinking, and am thinking now of Austria herself among the rest, as well as of Serbia and of Poland. Justice and equality of rights can be had only at a great price. We are seeking permanent, not temporary, foundation sfor the peace of the world and must seek them candidly and fearlessly, as always the right will prove to be the expedient.

What shall we do, then, to push this great war of freedom and justice to its righteous conclusion? We must clear away with a thorough hand all impediments to success and we must make every adjustment of law that will facilitate the full and free use of our whole capacity and force as a fighting unit.

Should War on Austria.

One very embarrassing obstacle that stands in our way is that we are at war with Germany, but not with her allies. I therefore very earnestly recommend that the congress immediately declare the United States in a state of war with Austria-Hungary.

Austria-Hungary is for the time being not her own mistress, but simply the vassal of the German government.

We must face the facts as they are and act upon them without sentiment in this stern business.

The government of Austria-Hungary is not acting upon its own initiative or in response to the wishes and feelings of its own peoples, but as the instrument of another nation. We must meet its force with our own and regard the central powers as but one. The war can be successfully conducted in no other way.

The same logic would lead also to a declaration of war against Turkey and Bulgaria. They are also the tools of Germany. But they are mere tools and do not yet stand in the direct path of our necessary action. We shall go wherever the necessities of this war carry us, but it seems to me that we should go only where immediate and practical considerations lead us and not heed any others.

It will be necessary to extend in certain particulars the legislation of the last session with regard to alien enemies; and also necessary, I believe, to create a very definite and particular control over the entrance and departure of all persons into and from the United States.

Legislation should be enacted defining as a criminal offense every wilful violation of the presidential proclamations relating to alien enemies promulgated under section 4067 of the revised statutes and providing appropriate punishments; and women as well as men should be included under the terms of the acts placing restraints upon alien enemies.

Must Regulate Prices.

Recent experience has convinced me that the congress must go further in authorizing the government to set limits to prices. The law of supply and demand, I am sorry to say, has been replaced by the law of unrestrained self-

(Continued on page thirty-one.)

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Boils and Furnuncles---What You May Do to Cure Them

Dr. Hirshberg.

Furuncles, carbuncles and boils may be said to be grown up pimples or "hickies." They are abominations that weary even the patience of a Job. The black plague may be worse as a summary visitation of death, but is not their equal as a Torquemada torment and a personal nuisance.

While the little bacteria called staphylococci are the conspicuously guilty associates of these pests, the mere invasion of a healthy hair bulb, sweat canal or wax skin gland is not all-sufficient to initiate this malicious animal infection.

More than germs and open flesh are generally concerned. Overloaded white blood corpuscles—the consequences of gluttony or a diet of rich, sweet, hot or starchy victuals—seem also needed to prepare for the boils and their bacteria.

After all, a boil is a battle ground on which is waged a fight between the lymph, tissue juices, blood corpuscles and tissue units on the one side, and the invading microbes and their poisons on the other.

Before matter and pus are formed the result is in doubt and the battle is about equal. Redness, swelling and severe pain mark the days or hours of this preliminary "unripe" onslaught.

Finally, as the living, defensive forces begin to vanquish the bacterial Huns, the dead, dying and wounded are mixed macerated debris called pus, matter or prurient fluid. If this is quickly evacuated by the helpful incision of a surgeon's sterillized lancet or by the spontaneous digestion of the tense injured, overlying skin, it isn't long before the conquering heroes of human life rout out the remnants of the treacherous vandals. They are destroyed then faster than they can breed.

The time dishonored home treatment to use a warm, moise, dusty mess of some cereal such as flaxseed in poultice form to help hastening "the ripening" of the boil is a fine plan to spread the boil bacteria to a new point or to several spots. Those bacteria flourish like green bay trees upon such vegetative poultices, yet some still persist in the perpetuation of such an error.

The full and detailed destruction of the bacteria left in the boil is a much saner and, of course, more modern treatment. Whether the boil is soon open or not the contents should be disinfected by carbolic acid, hot ammoniated mercury ointment, the "thermocautery," the insertion of phenol or naphthol into the pustube, and the use of the new dictloramin—T, or Dukin's solution, into the opening.

Then a simple diet, and later the preventive vaccine should fulfil your ardent wish to be free.

All the World's a Stage, and All the Men and Women Merely Players

Earns High Honor.

Frederick R. Harris, the youngest bureau chief and the youngest admiral in the navy, has been selected as general manager of the emergency fleet corporation. He is 42 years old, is at present chief of the bureau of yards and docks, and came from civilian life into the navy in 1903. In 1910 he built a drydock in the Brooklyn navy yard, through quicksand, by sinking caissons down to bedrock. Last year the president made him a rear admiral for life.

Pleasure Route Now Path of the Fleeing

The Grand canal, shown in the picture above, is given over to gondolas and other craft carrying people evacuating the city of Venice. To protect as much as possible the relics and valuables all precautionary measures have been taken. It has been reported that the famous Palace of the Doges has been covered with sandbags and the delicate-arched facade has been shored with heavy timbers. The Campanile has sandbags for 40 feet around the base. After gain of much territory by Italy following a long, costly campaign, Germany and her Austrian allies suddenly presented reenforcements and made an attack that necessiated rapid Italian retreat to prevent the complete destruction of the latter's army.

Victim of Bolsheviki.

General Dukhonin, removed by the Bolsheviki because he refused to undertake peace negotiations with Germany.

Sure of Victory.

The above is Major General Charles G. Treat of the United States army, photographed recently upon his return from the western front. Treat holds that we are sure of victory in the conflict with Germany. He said that the mud, cold and rain are the worst enemies that our American soldier boys have to battle with over there. He added: "We are going to take our time about getting in this fight, but when we get in, we will clean up."

Prepare to Fight on Warships

Russian women are now organizing themselves as sailors to take the place of men who have deserted their posts under the influence of socialistic propaganda. Here are shown some of the Amazons who are preparing to join the fleet in the Baltic.

Git!

—St. Louis Republic.

The Fat Juggler From Hades.

—New York Herald.

Young Flier Makes Good.

In the above photograph is shown Joseph C. Stehlin of New York city, 19 years of age, who is the youngest American aviator in France. He has already made good as a flier in France. He was refused the right to enlist in the American and British flying corps, but was accepted by the French. Young Stehlin has now been transferred to General Pershing's forces as an instructor.

What Is Advertising?

A Big Force in the World Today

What is advertising? One expert defines the word as meaning "something to tell about something to sell."

Elbert Hubbard, the writer, said: "Advertising is the education of the public as to who you are, where you are and what you have to offer in the way of skill, talent or commodity. The only man who should not advertise is the one who has nothing to offer in the way of service, or one who can not make good."

But, however we define the word, it is certain that advertising is one of the great forces in the world today.

It is through advertising that tens of thousands of people have learned of the combined harvester, the sewing machine, the cream separator, the telephone, the silo and scores of other important inventions.

The advertisements in each week's issue of this paper are well worth reading. They contain up to date information regarding the output of many of the country's biggest and most progressive manufacturers and dealers.

It will surely interest you to read what these manufacturers have to say in their advertisements. And why not send to them for further information? By doing so you can obtain interesting and informative booklets, catalogs, and circulars free of charge.

And when you do write, kindly mention the fact that you read the advertisement in this paper.

Make More Days; Get More Eggs

Electricity Is Taking Part in Production of Poultry

A short time ago the only known incubator was a hen. Then came the crude bit of hen-house furniture with the lamp to warm it. Still the old hen maintained the lead as the chicken hatcher. But the crudity of the wooden incubator gave way before invention, the lamp gave way before a better lamp, and now the better lamp is giving way before a—a still better lamp? Many who have tried the electric incubator will tell you without hesitating that electricity is a better lamp. In fact, electricity appears to be fast becoming the preferred means of warming the incubators, and the brooders of some of the most successful poultrymen are similarly warmed.

It is claimed by advocates of the electric system of hatching that it is possible to maintain a more even degree of heat for the entire 24 hours of the day than with any other heating appliance. It is also claimed, but without positive proofs as yet, that the escape of static electricity from the wires and appliances conveys to the embryonic and hatching chick a vigor that the oil hatched chick does not possess. In addition to this, the claim is made that there is actually an injurious effect to the chicks from the gases created by the oil burner.

What it costs to hatch a chick by the "juice" plan, depends largely upon the conditions met with. In some localities, and under favorable housing and incubating conditions, it is claimed that the entire process of incubating and hatching can be completed at a cost of two-fifths of a cent per chick. This is two-fifths "straight," however, not three for a nickel.

Can the Hen Be Fooled?

There are limits to which the electric method may be applied successfully, but these limits are much wider than they were even a few years ago. Maybe they will become yet more extended. Maybe the philosophy of the little boy who placed an ostrich egg before his hen and hung up a sign, "Keep your eye on this and do your darnedest," may yet be applied electrically. Why not?

It is the custom of good hens to lay an egg a day—some days. Now suppose that through the use of electricity, artificial days should be made so that a week might be divided into, say eight instead of seven periods of successive light and darkness. Wouldn't old Biddy go right on laying an egg a day and produce seven instead of six eggs a week? (Hens should rest on Sunday the same as other folks, of course).

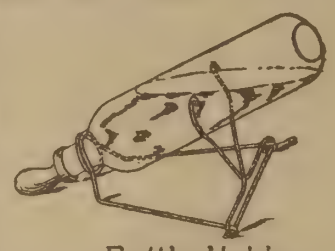
Going too far? Perhaps so, but in the winter months properly adjusted electric lights could induce the hens to get up earlier in the morning for a good warm feed and an early start on the day's work of egg production. This is no dream. Some of the best poultrymen in the country have their houses lighted by electricity and can show results.

FUR IN DEMAND.

Unusually High Prices Are Paid.

In spite of or due in part to the war, the demand for furs of all kinds is greatly increasing. This is evidenced by the tremendous sales made the first day of the St. Louis fur auction, which reached $500,000. Representatives of foreign firms bid in exciting competition with American buyers.

The prices ranged the highest in the history of the fur trade. A lot of 500 silver fox pelts brought $120,000, while single sets were bid at $860. Wildcat skins went at unusually high figures. Skunk, muskrat, mink, red fox and ermine commanded higher prices than last year.



This condition is due in part to scarcity of pelts, caused by the government draft law, which has taken many trappers into the army service and reduced the number of skins available. It affords one of the money-making opportunities always created by world events for the young men of the farms and country generally to go into the trapping business. With fewer trappers, the fur-bearing animals ought to be plentiful and easy to catch.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Bottle Holder.

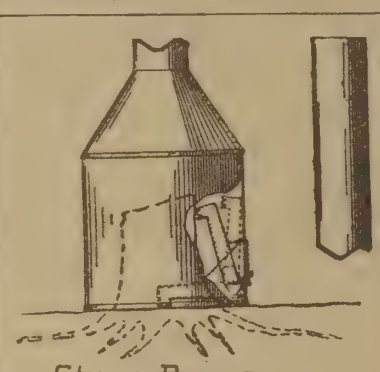
Each week we describe at least one invention of interest to women. In this

Bottle Holder

case it is a bottle holder made from two strips of wire bent as shown. You could make one in a few minutes.

Head Covering.

This covering is used while drying the hair in the sun after a shampoo. It is a piece of cloth approximately 18



Hair Drier

inches wide by 24 inches long, with a piece of tape sewed along one 18-inch end. The eye shade is attached by two glove fasteners.

Stumps Burned Into Ground.

This sheet-metal burner differs from others in that it has a draft tube which sinks and applies the draft directly to

Stump Burner

the stump until it is burned into the ground. The burner is rolled from one stump to the next.

The temperature of the earth appears to increase from the outer surface downward at the rate of one degree Fahrenheit for every 50 or 60 feet, and at the relatively short distance of a few miles the temperature must be exceedingly high.

THE BARRIER

By REX BEACH

Author of "The Spoilers," "The Ne'er-Do-Well," "The Silver Horde," etc.

Copyright, 1908, by Harper & Brothers.

SYNOPSIS.

Gale is trader of Flambeau, a frontier on the Yukon. Lieutenant Burrell is sent to this camp to preserve order. The day of his arrival Necia, Gale's daughter, returns from a mission school. As she and Burrell are talking, two halfbreed children and a squaw appear, and Necia, noting the lieutenant's look of disgust, informs him that they are her mother, brother and sister. Poleon Doret, a Frenchman, returns from Dawson, and on the same boat comes Runnion, a desperado. In attempting to make Runnion leave Flambeau, Burrell is shot by him and only the quick hand of Poleon saves him.

As Necia is arrayed in a ball gown, which Poleon brought her from Dawson, Burrell happens in. He is amazed at the ease with which she wears the dress and at the fairness of her skin. She confesses to a feeling that she, Necia, should be called "Merridy."

"No Creek" Lee, a prospector, after years of hard luck, makes a big strike. Runnion returns, and with him Stark, who has come to grubstake the miners and open a saloon. Stark causes Gale and the Squaw Alluna, great uneasiness. The men of the camp leave for Lee's claim, Necia, longing for riches so she may become like other girls, begs Burrell to follow them with her. Burrell knows that Necia is coveted by half the men in the camp and that it would cause a great uproar should he spend a night alone with her in the woods. This would be an easy way to compel them to an open state of enmity, which would be preferable to the indifferent toleration which he has met among them. This together with her entreaties and the confession that she loves him, sweeps aside all discretion and together they start on the journey.

Poleon Doret sang gaily as he set out for the claim with Gale. Here was a gift of wealth for him to lay at the feet of Necia with his laughter, his music and his heart. On the way Gale tells him the story of a good girl, loved by two men, a good man and a bad man, and how the he-devil had won in the game of love. That night the party camps in the woods, Stark, Runnion, Lee, Poleon and Gale. In the morning they draw straws to see who will have first choice of claims, Gale and Poleon receiving the lucky ones.

Sitting by the campfire when night had fallen, Necia begs for stories of Burrell's home life and of his sister. The girl apparently realizing her peril, wisely chooses this means of awakening in the lieutenant his slumbering conscience. She succeeds, for Burrell's honor is old and persistent. The next morning the two resume their journey, reaching Lee's cabin before the other party. Necia locates three claims for herself, but no amount of pleading will induce Burrell to stake one.

A few hours later Lee and the others arrive. That afternoon as Runnion, Stark and Poleon are locating some distance from the camp, Runnion makes some insinuations about Necia and Burrell which throws Poleon into a frenzy of anger and he vows that either Burrell or Runion will pay for them with his life.

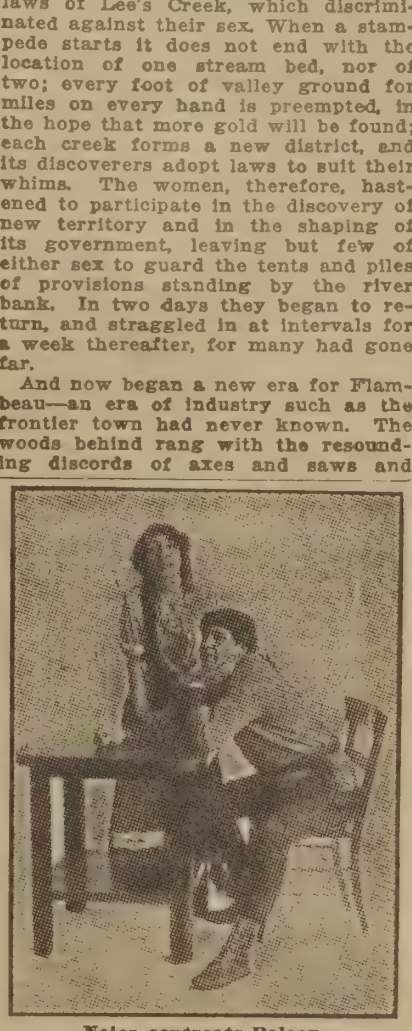
After supper, Stark devotes himself to Necia, telling her the story of a girl about her own age who had chosen a young Bennett over another lover, Gaylord, and had married him. Then how Bennett came back one night to find his wife murdered and the kid gone. Of how they had chased Gaylord for months, but had finally lost track of him. Stark is about to tell the name of the little girl, but at this point a shot rings out and Gale jumps half way across the room crying: "My God, I've killed him." But the bullet hisses Stark by six inches and lies buried in a log.

With all the treachery and cunning conceivable, Stark and Runnion have systematically schemed to best Gale and Poleon out of their claims. They dispose of Necia's rights by saying that, as she has not yet reached 18, she has no legal authority to hold mining claims. As they are wrangling, Burrell slips out and restakes Necia's claims for himself, telling Necia afterward that they are hers as soon as she becomes of age.

Once home, Gale tells Alluna how Stark has proven himself to be bullet-proof. Alluna gives the trader a knife and tells him to kill Stark. As Gale goes out, he says that he can not do it in cold blood, but he slips the knife and scabbard inside the bosom of his shirt.

Corporal Thomas, guessing Necia's love for Burrell, tells her the story of another soldier who had loved a half-breed girl and how it had lost him position, honor and all that was worth while in life. Afterward Necia seeks her father in a rage and asks him why he married her mother and made her different from other girls. Then, for the first time, she learns that her father has never married Alluna. Necia tries to comfort herself with the thought that Meade's love reaches beyond blood and station and that he will marry her in spite of these things.

The steamboat comes that day, loaded with men. Stark's saloon is running, and by night Flambeau is a mining camp.



That night the miners in Stark's saloon are about to kill a negro for theft when Burrell intervenes. Gale tells Alluna the cause of Necia's grief and that she must be told the truth no matter if it does mean his life. All day Burrell has been fighting with himself. Out in the moonlight of the summer midnight he again faces the whole question of what marriage with Necia would mean to him and decides that, however hard it may be, he must put the girl out of his life forever. Just as he has conquered himself, he meets Necia, who has crept out to be alone with her misery. The sight of her tear-wet cheeks is too much for him, and without a word he takes her in his arms, quieting with his love and tenderness all her doubts and fears. The barriers Meade has built disappear and once more his course lies straight before him, but he does not know that the moon madness is upon him.

CHAPTER XI.

Where the Path Led.

By daylight next morning every man and most of the women among the new arrivals had disappeared into the hills—the women in spite of the by-laws of Lee's Creek, which discriminated against their sex. When a stampede starts it does not end with the location of one stream bed, nor of two; every foot of valley ground for miles on every hand is preempted, in the hope that more gold will be found; each creek forms a new district, and its discoverers adopt laws to suit their whims. The women, therefore, hastened to participate in the discovery of new territory and in the shaping of its government, leaving but few of either sex to guard the tents and piles of provisions standing by the river bank. In two days they began to return, and straggled in at intervals for a week thereafter, for many had gone far.

And now began a new era for Flambeau—an era of industry such as the frontier town had never known. The woods behind rang with the resounding discords of axes and saws and

Necia entreats Poleon.

crashing timber, and new cabins appeared on every hand, rising in a day. The sluggish air was noisy with voices, and the edge of the forest receded gradually before the busy pioneers, replacing the tall timbers with little, high banked homes of spruce and white-papered birch. From dawn till dark arose the rhythmic rasp of men whip-sawing floor lumber to the tune of two hundred dollars per thousand; and with the second steamer came a little steam saw mill, which raised its shrill complaint within a week, punctuating the busy day with its piping whistle.

The trail along the Flambeau was dotted continuously with toiling human beasts of burden, that floundered laboriously beneath great packs of provisions and tools and other baggage, winding like an endless stream of ants through the hills to "No Creek" Lee Creek, where they reenacted the scenes that were occurring in the town. Tents and cabins were scattered throughout the length of the valley, lumber was sawed for sluice-boxes, and the virginal breezes that had sucked through this seam in the mountains since days primeval came to smell of spruce fires and echo with the sounds of life.

A dozen tents were pitched on Lee's discovery claim, for the owner had been besieged by men who clamored to lease a part of his ground, and, yielding finally, he had allotted to each of them a hundred feet. Forthwith they set about opening their portions, for the ground was shallow, and the gold so near the surface that winter would interfere with its extraction; wherefore they made haste. The owner oversaw them all, complacent in the certainty of a steady royalty accruing from the working of his allotments.

Every day there came into Flambeau exaggerated reports of new strikes in other spots, of strong indications and of rich prospects elsewhere. Stories grew out of nothing, until the camp took an hysterical pleasure in exciting itself and of deceiving every stranger who came from north or south, for the wine of discovery was in them all, and it pleased them to distort and enlarge upon every rumor that came their way, such being the temper of new gold-fields. They knew they were lying, and that all other men were lying also, and yet they hearkened to each tale and almost deceived themselves.

Burrell sought Necia at an early day and, in presence of her father, told her that he had been approached by men who wished to lease the claims he held for her. It would prove an inexpensive way to develop her holdings, he said, and she would run no risk; moreover, it would be rapid, and insure a quick return, for a lease so near to proven territory was in great demand. After some discussion this was arranged, and Meade, as trustee, allotted her ground in tracts, as Lee had done. Poleon followed suit; but the trader chose to prospect his own claims, and to that end called in a train of stiff-backed Indian packers, moved a substantial outfit to the creek, and thereafter spent much of his time in the hills, leaving the store to Doret. He seemed anxious to get away from the camp and hide himself in the woods. Stark was almost constantly occupied at his saloon, for it was a mint, and ran day and night. Runnion was busy with the erection of a substantial structure of squared logs, larger than the trading post, destined as a dance-hall, theater and gambling house. Flambeau, the slumbrous, had indeed aroused itself, stretched its limbs, and sprung into vigorous, virile, feverish being, and the wise prophets were predicting another Dawson for it, notwithstanding that many blank spots had been found as the creek of Lee's finding bared its bedrock to the miners. These but enhanced the value of the rich finds, however, for a single stroke of good fortune will more than offset a dozen disappointments. The truth is, the stream was very spotted, and Lee had by chance hit upon one of the bars where the metal had lodged, while others above and below uncovered a bedrock as barren as a clean-swept floor. In places they crosscut from rim to rim, drove tunnels and drains and drifts, sunk shafts and opened trenches without finding a color that would ring when dropped in the pan; but that was an old, old story, and they were used to it.

During these stirring weeks of unsleeping activity Burrell saw little of Necia, for he had many things to occupy him, and she was detained much in the store, now that her father was away. When they met for a moment they were sure to be interrupted, while in and around the house Alluna seemed to be always near her. Even so, she was very happy, for she was sustained by the constant hectic excitement that was in the air and by her brief moments with Meade, which served to gladden her and make of the days one long, delicious, hopeful procession of undisturbed dreams and fancies. He was the same fond lover as on that adventurous journey up Black Bear creek, and wooed her with a reckless fire that set her aglow. And so she hummed and laughed and dreamed the days away, her happiness matching the peace and gladness of the season.

With Burrell, on the contrary, it was a season of penance and flagellations of spirit, lightened only by the moments when he was with her, and when she made him forget all else. This damnable indecision goaded him to self-contempt; he despised himself for his weakness; his social instincts and training, his sense of duty, and the amenities of life that proud men hold dear tugged steadily, untiringly at his reason, while the little imp of impulse sat grinning wickedly, ready to pop out and upset all his high resolutions. It raised such a tumult in his ears that he could not hear the other voices; it stirred his blood till it leaped and pounded, and then ran off with him to find this tiny brown and beaming witch who was at the bottom of it all.

No months in any clime can compare with an Arctic summer when nature is kind, for she crowds into this short epoch all the warmth and brightness and splendor that is spread over longer periods in other lands, and every growing thing rejoices riotously in scent and color and profusion. It was on one of these heavenly days, spiced with the faintest hint of autumn, that Necia received the news of her good fortune. One of her leasers came into the post to show her and Poleon a bag of dust. He and his partner had found the pay streak finally, and he had come to notify her that it gave promise of being very rich, and now that its location was demonstrated, no doubt the other "laymen" would have it within a fortnight. As all of them were ready to begin sluicing as soon as the ground could be stripped, undoubtedly they would be able to take out a substantial stake before winter settled and the first frost closed them down.

She took the news quietly, but with shining eyes, though her pleasure was no greater or more genuine than Poleon's, who grasped both her hands in his and shouted, gleefully:

"Bien! I'm glad! You'll be riche gal for sure now, an' wear plaintee fine dress lak' I fetch you. Jus' t'ink, you fin' gol' on your place more queecker dan your fader, an' he's good miner, too. Ha! Dat's bully!"

"Oh, Poleon! I'll be a fine lady, after all," she cried— just as I've dreamed about! Wasn't it beautiful, that pile of yellow grains and nuggets? Dear, dear! And part of it is mine. You know I've never had money. I wonder what it is like to be rich?"

"How I'm goin' tell you dat?"

"Oh well, they will find it on your claims very soon."

He shook his head. "You better knock wood w'en you say dat. Mebbe I draw de blank again; nobody can't tell. I've do de sam' t'ing before, an' dose men w'at been workin' my groun' dey're getting' purty blue."

"It's impossible. You're sure to strike it, if you don't, you can half of what I make—I'll be too wealthy, anyhow, so you might as well."

He laughed again, at which she suddenly remembered that he had not laughed very much of late, or else she had been too deeply absorbed in her own happiness to mark the lack of his songs and merriment.

"When you do become a Flambeau king," she continued, "what will you do with yourself? Surely you won't continue that search for your far country. It could never be so beautiful as this." She pointed to the river that never changed, and yet was never the same, and to the forests, slightly tinged with the signs of the coming season. "Just look at the mountains," she mused, in a hushed voice; "see the haze that hangs over them—the veil that God uses to cover up his treasures." She drew a deep breath. "The breeze fairly tastes with clean things, doesn't it? Do you know, I've often wanted to be an animal, to have my senses sharpened—one of those wild things with a funny, sharp, cold nose. I'd like to live in the trees and run along the branches like a squirrel, and drink in the perfume that comes on the wind, and eat the tender, growing things. The sun is bright enough and the world is good enough, but I can't feel enough. I'm incomplete."

"It's very fined," agreed the Canadian. "I don' see w'y anybody would care for livin' on dem cities w'en dere's so much nice place outside."

"Oh, but the cities must be fine also," said she, "though, of course, they can't be as lovely as this. Won't I be glad to see them!"

"Are you goin' away?" he inquired, quickly.

"Of course." Then glimpsing his downcast face, she hastened to add, "That is, when my caims turn out rich enough to afford it."

"Oh," he said, with relief. "Dat's different. I s'pose it mus' be purty dull on dem beeg town; now'ere to go, not'in' to see 'cept lot of houses."

"Yes," said Necia, "I've no doubt one would get tired of it soon, and long for something to do and something really worth while, but I should like to try it once, and I shall as soon as I'm rich enough. Won't you come along?"

"I don't know," he said, thoughtfully; "mebbe so I stay here, mebbe so I tak' my canoe an' go away. For long tam' I t'ink dis Flambeau she's de promis' ian' I hear callin' to me, but I don' know yet for w'ile."

"What kind of place is that land of yours, Poleon?"

"Ha! I never see 'im, but she's been cryin' to me ever since I'm little boy.

(Continued on the following page.)

THE BARRIER

(Continued from the preceding page.)

It's a place w'ere I don' get too hot on de summer an' too col' on de winter; it's a place w'ere birds sing an' flowers blossom an' de sun shine, an w'ere I can sleep widout dreamin' 'bout it all de tam'."

"Why, it's the land of content—you'll never discover it by travel. I'll tell you a secret, Poleon. I've found it—yes, I have. It lies here." She laid her hand on her breast. "Father Barnum told me the story of your people, and how it lives in your blood—that hunger to find the far places; it's what drove the voyageurs and coureur du bois from Quebec to Vancouver, and from the Mississippi to Hudson's Bay. The wanderlust was their heritage, and they pushed on and on without rest, like the salmon in the spring, but they were different in this: that they never came back to die."

"Dat's me! I never see no place yet w'at I care for die on, an' I never see no place yet w'at I care for see again 'cept dis Flambeau. I lak' it, dis one, purty good so far, but I ain' know w'en I'm goin' get tire'. Dat depen's." There was a look of great tenderness in his eyes as he bent toward her and searched her face, but she was not thinking of him, and at length he continued:

"Fader Barnum, he's goin' be here nex' Sonday for cheer up dem Injun. Constantine she's got de letter."

"Why, that's the day after tomorrow!" cried Necia. "Oh, won't I be glad to see him!"

"You don' get dem kin' of mans on de beeg cities," said Poleon. "I ain' never care for preachin' much, an' dese feller w'at all de tam' pray an' sing t'rough de nose, dey mak' me seeck. But Fader Barnum— Ba Gar! She's the swell man."

"Do you know," said Necia, wistfully, "I've always wanted him to marry me."

"You t'inkin' 'bout marry on some feller, eh?" said the other, with an odd grin. "Wal! w'y not? He'll be here all day an' night. S'pose you do it. Mos' anybody w'at ain' got some wife already will be glad for marry on you—an' mebbe some feller w'at has got wife, too! If you don' lak' dem, an' if you're goin' marry on somebody, you can be wife to me."

Necia laughed lightly. "I believe you would marry me if I wanted you to; you've done everything else I ever asked. But you needn't be afraid; I won't take you up." In all her life this man had never spoken of love to her, and she had no hint of the dream he cherished. He had sung his songs to her and told her stories till his frank and boyish mind was like an open page to her; she knew the romance that was the very fiber of him, and loved his exaggerated chivalry, for it minded her of old tales she had read; but that he could care for her save as a friend, as a brother—such a thought had never dawned upon her.

While they were talking a boat had drawn inshore and made fast to the bank in front of them. An Indian landed and, approaching, entered into talk with the Frenchman.

By-and-by Poleon turned to the girl, and said:

"Dere's 'hondred marten-skins come in; you min' de store w'ile I ma' trade wit' dis man."

Together the two went down to the boat, leaving Necia behind, and not long after Runnion sauntered up to the store and addressed her familiarly.

"Hello, Necia! I just heard about the strike on your claim. That's fine and dandy."

She acknowledged his congratulations curtly, for although it was customary for most of the old-timers to call her Christian name, she resented it from this man. She chose to let it pass, however.

"I had some good news last night myself," he continued. "One of my men hit some good dirt, and we'll know what it means in a day or so. I'll gamble we're into the money big, though, for I always was a lucky cuss. Say, where's your father?"

"He's out at the mine."

"We've used up all of our bar sugar at the saloon and I want to buy what you've got."

"Very well, I'll get it for you."

He followed her inside, watching her graceful movements and attempting, with his free-and-easy insolence, to make friendly advances, but, seeing that she refused to notice him, he became piqued and grew bolder.

"Look here, Necia, you're a mighty pretty girl. I've had my eye on you ever since I landed and the more I see of you the better I like you."

"It isn't necessary to tell me that,"

Winter Blooms

Time to Pot Bulbs for Easter

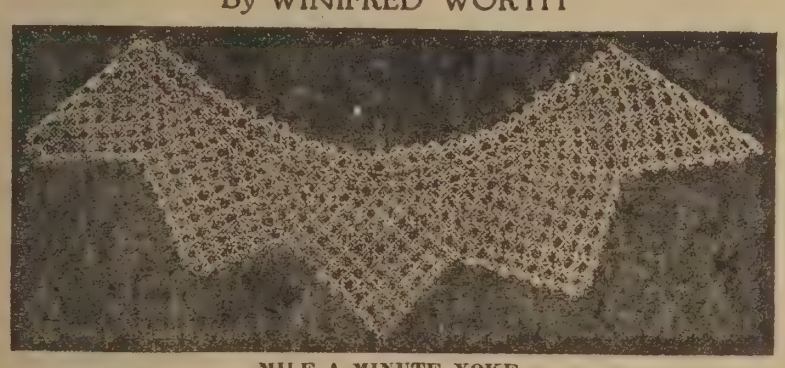
By Ruth Gipson Plowhead.

As a child I remember often visiting at a home where large pots of yellow oxalis blossomed freely through the winter months. The pots were on brackets on either side of the window, and impressed me as nothing else about the furnishings did. This is such a sunny little flower and so easily grown that it should brighten more flower loving homes. The bulbs cost but a few cents, and should be potted and rooted in a cool light place. As with most bulbs, too much head blights the buds and prevents blooming.

Thinking of bulbs, it is a splendid time to pot them this month for Easter blooming. Easter lilies are a favorite with many and it is wonderfully interesting to watch the unfolding, from the first tiny green shoot to the fragrant flowers. The bulbs may be had for from 15 to 50 cents, according to the number of flower buds they are supposed to have, but the amateur is usually advised to try the smaller bulbs, or, if in a light room, should have the top of the pot protected with moss until the bulbs are well rooted. At no time should they be kept too warm.

The asparagus sprengori is probably one of the most popular of the "green" plants for house culture. Not many people realize that this plant may be so easily started from seed. The seeds are hard and take some time to germinate, but if planted in a fern dish or small pot suitable for table decorations the little seedlings germinate within several months and form a feathery mass which makes a very pretty table decoration. The seedlings may be left in these seed pans for several months.

Keep Fruit Jars Working.



Many of us breathed a sigh of relief when our last jar was filled and placed in the cellar. But as we open these jars there are a number of things with which we can refill them, and so save some foods for the late spring use. Apples are so plentiful this year that we out west often have more than we can use. Did you ever think that next year may be a fruit failure? Even if it is not there are several months when fruit is scarce, during May and June, especially, and if when cooking apple sauce for the day's use one cans a jar or two the late spring will find your otherwise empty jars filled with enough sauce to tide over a number of otherwise fruitless meals.

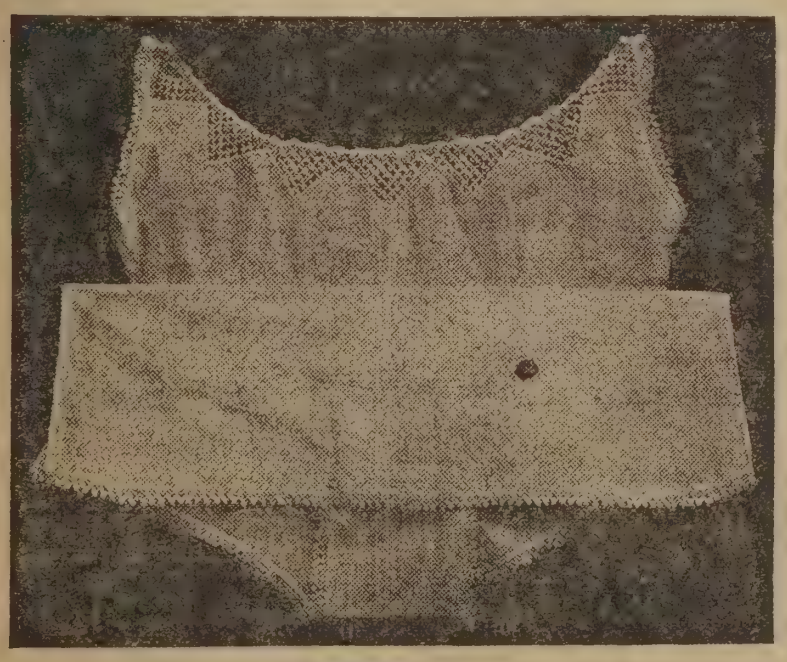
We have more squash than we can use and are canning it. Though canning it especially for squash pies, it will doubtless be used as a vegetable, too. To can squash, which some people find difficult, cut the squash into small pieces with an ax, pare, throw into boiling water and let it boil 10 minutes. Then dip in cold water, drain, and pack at once in warm jars. Boil, with the water over the tops of the jars for full two hours. It is always better to allow a little time over the directions than to run the risk of undercooking. Seal and store for use.

Carrots, which are so tender when freshly dug become more pithy and wrinkled toward spring, as do turnips. These may be canned from time to time if the family care for them. Some people we know are canning chickens and turkeys, having more than they care to carry over winter, and prefer to can them to selling.

Crochet and Tatting Designs

By WINIFRED WORTH

MILE-A-MINUTE YOKE.



Use No. 40 Cordonnet.

1st Row—Ch. 20 catch in 9 st. ch. 5 1 t. in next. Ch. 3, 1 t. in same st., ch. 5 (1 t. 3 ch. 1 t.) in 6 st. turn.

2d Row—Ch. 4. 1 t. in 1st L. 3 ch. 1 t. 3 ch. 1 t. 3 dc. 1 t. in same loop. Repeat to end of row. In last L. add one extra 3 ch. t., making 4 L. in last of row, turn.

3d Row—Ch. 6 (1 t. in 2d l. 3 ch. 1 t.) ch. 5 (1 t. 3 ch. 1 t.) in 4th l. Repeat to end of row. Continue to increase every other row until there are 9 loops or shells in last row. Repeat pattern until 14 points are made, join. Finish with a shell of loops.

For edging of garment use same edge as edge of yoke.

Envelope Chemise.

This shows the Mile-a-Minute yoke in an envelope chemise. This yoke may be used very nicely in gowns, corset covers or negligees, or in matched sets. This can be worked into any number of points, but it is better to work an even number of same, and have one point in exact center of yoke. The yoke in this garment contains 14 points.

Amusing the Children

By ELIZABETH QUAKER.

Food, shelter and clothing are the three essentials to the human family, but every mother knows amusement holds a very important place. Mothers often express themselves as dreading the winter months, which shut the little ones indoors. "I can never keep my house in order and their noise drives me nearly frantic."

Yes, I know, but do not dwell upon that side of the question, rather consider it a time teeming with golden opportunities. Say "This is my chance." These little minds are getting many high ideals and much education through their play. How important then that we should direct that play into helpful channels.

At times when mother is "just too busy to bother" a "treasure box" comes in very handy for the "wee little folks." High, in a remote corner, on the top of the shelf of my pantry, is a large shoe box into which little fingers are forbidden to pry. (No, that's not where I keep my raisins.) Its contents resemble what many would term trash. A lot of odds and ends which I can arrange, quickly, into entertainment for the little ones. A wide-mouthed bottle half filled with kernels of corn or beans, with a cork that fits, will amuse a child of 2 or 3 years for an hour if given a small tin like a jelly glass cover into which to pour the corn. They will call the corn feed for imaginary stock or perhaps sheep or pigs will be breaking from an imagirary pen. At least, mother will gain a quiet time for that bit of work she was anxious to finish.

A box with a few toothpicks and assorted sized buttons, a short shoe lace and some shoe buttons to string in another small box, beads to string, an envelope with a bright picture cut into irregular pieces, for them to fit together again, will amuse an older child. There is no end to the little things I drop into my "treasure box."

Another form of home amusement which is a most potent factor toward good, whose educational value can hardly be overestimated, is story-telling.

Beginning with the nursery jingles for the little tots, proceeding with all the familiar fairy tales, biblical stories, incidents concerning famous historical characters and family traditions, on through childhood. Is there anything the children enjoy more generally than stories?

The mother who announces "I have a new story to tell tonight," never needs "slipper aid" to get the youngsters into their nighties.

At our house father is a good story-teller, too. Oftentimes the children gather around the fire with him to hear of some interesting incident of his boyhood or of a thrilling bear hunt about which he has been reading.

An occasional evening at games, in which the parents join, is time well spent. Such old standbys as dominoes, checkers, authors and the like should be familiar to every child.

Games, stories and music, with popcorn and apples, strong cords to help form a lover's knot to hold the children at home.

Scrapple

Good, Economical Winter Food

Scrapple—a meat and cornmeal mush, greatly relished by many—puts to good use such meat as hog heads, hearts and livers, and is a good use for corn meal also. The United States department of agriculture gives the following directions for preparing this dish, excellent for breakfast, luncheon or dinner.

Ingredients.

Whole hog heads, 10 pounds.
Hog livers and hearts, 2½ pounds.
(A small quantity of beef can be used also if desired.)
Corn meal (yellow or mixed), 6 pounds.
Buckwheat or rye flour, ½ pound.
Spices as marjoran, sage, thyme and pepper in proportion as desired, or omit those not desired, 3 ounces.
Salt, ½ pound.
Liquid in which meat is boiled; use a quantity equal to the total weight of the combined solids.
The proportion of the various ingredients may be varied to suit individual taste.

Directions for Preparing.

Clean the hog heads thoroughly, removing the eyes and ear tubes. Split the head lengthwise and remove the teeth and the soft bones in and near the nasal cavities. Place the hog heads and other meat into a large kettle or caldron with a liberal quantiy of water and cook until the meat falls off the bones. Remove all of the meat and soft tissues from the bones and chop the meat by passing it through a meat grinder. Strain the cooking liquid to remove any small pieces of bone. Place the liquid back into the kettle. Heat to boiling point, at which time slowly add the meal and flour, and stir constantly to prevent the meal from forming into lumps and also to avoid scorching. Boil and stir until the mass becomes thick, and then add the salt, spices and chopped meat. Boil ten minutes and while still hot pour the product into deep wet molds—bread pans will do. Pour 2 to 4 large spoonfuls of melted lard over the product in the pans. As soon as the product has cooled it is ready for use.

The usual way of serving scrapple is to cut it into slices about one-half inch thick, dust the slices with flour or cracker dust, or dry corn meal and fry until the outside is somewhat crisp. Serve while hot. Fried apples are good with fried scrapple.

"The Barrier" By REX BEACH

(From page twenty-four.)

she replied. "The price of the sugar will be just the same."

"Yes, and you're bright, too," he declared. "That's what I like in a woman—good looks and brains. I believe in strong methods and straight talk, too; none of this serenading and moonlight mush for me. When I see a girl I like I go and get her. That's me. I make love like a man ought to—"

"Are you making love to me?" she inquired, curiously.

"It's a little bit sudden, I know, but a man has to begin some time. I think you'd just about suit me. We'll both have money before long and I'll be good to you."

The girl laughted derisively in his face.

"Now don't get sore. I mean business. I don't wear a blue coat and use a lot of fancy words, and then throw you down when I've had my fun, and I don't hang around and spoil your chances with other men, either."

"What do you mean?"

"Well, I'm no soft-talking southerner with gold buttons and highfalutin' ways. I don't care if you are a squaw, I'll take you—"

"Don't talk to me" she cried, in disgust, her voice hot with anger and resentment.

But he continued, unheeding: "Now, cut out these airs and get down to cases. I mean what I say. I know you've been casting sheep's eyes at Burrell, but, Lord, he wouldn't have you, no matter how rich you get. Of course, you acted careless in going off alone with him, but I don't mind what they're saying around camp, for I've made little slips like that myself, and we'd get along—"

"I'll have you killed," she hissed, through her clinched teeth, while her whole body vibrated with passion. "I'll call Poleon and have him shoot you." She pointed to the river bank a hundred yards away, where the Canadian was busy assorting skins.

But he only laughed at her show of temper, and shrugged his shoulders as he answered her, roughly:

"Understand me, I'm on the square. So think it over, and don't go up in the air like a skyrocket."

She cried out at him to "Go—go—go" and finally he took up his bundle, saying, as he stepped out slowly:

"All right. But I'm coming back, and you'll have to listen to me. I don't mind being called a squawman. You're pretty near white, and you're good enough for me. I'll treat you right—why, I'll even marry you if you're dead set on it. Sure."

She could scarcely breathe, but checked her first inclination to call Poleon, knowing that it needed only a word from her to set that nut-brown savage at Runnion's throat. Other thoughts began to crowd her brain and to stifle her. The fellow's words had stabbed her consciousness and done something for her that gentler means would not have accomplished; they had opened her eyes to a thing that she had forgotten—a hideous thing that had reared its fangs once before to strike, but which her dreams of happiness had driven out of her Eden. All at once she saw the wrong that had been done her, and realized from this brute's insult that those early fears had been well grounded. It suddenly occurred to her that in all the hours she had spent with her lover, there had never been one word of marriage. He had looked into her eyes and vowed he could not live without her, and yet he had never said the words he should have said, the words that would bind her to him. His arms and his lips had comforted her and stilled her fears, but after all he had merely made love. A cold fear crept over the girl. She recalled the old corporal's words of a few weeks ago, and her conversation with Stark came back to her. What if it were true—that which Runnion implied? What if he did not intend to ask her, after all? What if he had only been amusing himself? She cried out sharply at this, and when Doret staggered in beneath a great load of skins he found her in a strange excitement. When he had finished his accounting with the Indian and dismissed him, she turned an agitated face to the Frenchman.

"Poleon," she said, "I'm in trouble. Oh, I'm in such awful trouble!"

"It's dat Runnion! I seen 'im pass on de store w'ile I'm down below." His brows knit in a black scowl, and his voice slid off a pitch in tone. "W'at he say, eh?"

"No, no, it's not that. He paid me a great compliment." She laughed harshly. "Why, he asked me to marry him."

The man beside her cursed at this, but she continued: "Don't blame him for liking me—I'm the only woman for 500 miles around—or I was until this crowd came—so how could he help himself? No, he merely showed me what a fool I've been.

"I guess you better tell me all 'bout dis t'ing," said Poleon, gravely. "You know I'm all tam' ready for help you, Necia. W'en you was little feller an' got bust your finger you run to me queeck, an' I feex it."

"Yes, I know, dear Poleon," she assented, gratefully. "You've been a brother to me, and I need you now more than I ever needed you before. I can't go to father; he wouldn't understand, or else he would understand too much, and spoil it all, his temper is so quick."

"I'm not w'at you call easy-goin' mese'f," the Canadian said, darkly, and it was plain that he was deeply agitated, which added to the girl's distress; but she began to speak rapidly, incoherently, her impulsiveness giving significance to her words, so that the man had no difficulty in following her drift. With quick insight he caught her meaning, and punctuated her broken sentences with a series of grave nods, assuring her that he knew and understood. He had always known, he had always understood, it seemed.

"Don't think I'm unwomanly, Poleon, for I'm not. I may be foolish and faithful and too trusting, but I'm not—unmaidenly. You see, I've never been like other girls—and he was so fine, so different, he made me love him—it's part of a soldier's training, I suppose. It was so sweet to be near him, and to hear him tell of himself and all the world he knows—I just let myself drift. I'm afraid—I'm afraid I listened too well, and my ears heard more than he said—my head is so full of books, you know."

"He should have know' dat, too," said Poleon.

"Yes," she flared up. "He knew I was only an Indian girl.

The only color in Doret's face lay now in his cheeks, where the sun had put it; but he smiled at her—his warm, engaging smile—and laid his great brown hand upon her shoulder softly.

"I've look' in hees eye and' I'm always t'ink he's good man. I don' never t'ink he'll mak' fun of poor little gal."

"But he has, Poleon; that's just what he has done." She came near to breaking down, and finished, pathetically, "They're telling the story on the street, so Runnion says."

"Dat's easy t'ing for feex," he said. "Runnion, she don' spread no more story lak' dat."

"I don't care what they say. I want the truth. I want to know what he means, what his intentions are. He swears he loves me, and yet he has never asked me to marry him. He has gone too far; he has made a fool of me to amuse himself, and—and I couldn't see it until today. He's laughing at me, Poleon, he's laughing at me now! Oh, I can't bear it!"

The Frenchman took up his wide hat from the counter and placed it carefully upon his head, but she stopped him as he moved toward the door, for she read the meaning of the glare in his eyes.

"Wait till you understand—wait, I say! He hasn't done anything yet."

"Dat's de trouble. I'm goin' mak' 'im do semet'ing."

"No, no! It isn't that; it's these doubts that are killing me—I'm not sure——"

"I hear plaintee," he said. "Dere's no tam' for monkey roun'."

"I tell you he may be honest," she declared. "He may mean to marry me, but I've got to know. That's why I came to you; that's what you must find out for me."

"I'm good trader, Necia," said the Canadian, after a moment. "I'll mak' bargain with' you now. If he say yes he'll marry you, I don' ask no more; but if he say no, you geeve 'im to me. Is it go?"

She hesitated, while he continued, musingly, "I don' see how no man on al dis worl' could lef' you go." Then to her, "Wal, is it bargain?"

"Yes," she said, the Indian blood speaking now; "but you must learn the truth, there must be no mistake—that would be terrible."

"Dere ain' goin' be no mistak'."

"If he should refuse, I—I'll marry some one, quick. I won't be laughed at by this camp. I won't be a joke. Oh, Poleon! I've given myself to him just as truly as if—well, he—he has taken my first kiss."

Doret smote his hands together at this and began to roll his head backward from side to side, as if in some great pain, but his lips were dry and silent. After a moment the spell left him, the fire died down, leaving only a dumb agony in its place. She came closer and continued:

"I'll never let them point at me and say, 'There goes the squaw that—he threw away.'"

"You mak' dis very hard t'ing for me," he said, wearily.

"Listen," she went on, lashing herself with pity and scorn. "You say Father Barnum will be her on Sunday. Well—I'll marry some one, I don't care who!" Then, with a sudden inspiration, she cried, "I'll marry you—you said I could be a wife to you."

He uttered a sharp cry. "You mean dat, Necia?"

"Yes," she declared. "Why not? You'll do it for my sake, won't you?"

"Would you stan' up wit' me 'longside of de pries', lovin' dat oder feller all de tam?" he asked, queerly.

"Yes, yes! I'd rather it was you than anybody, but married I'll be on Sunday. I'll never let them laugh at me."

Doret held his silence for a moment, then he looked up and said, in level tones:

"It's easy t'ing for go an' ask 'im, but you mus' hear hees answer wit' your own ears—den you can't t'ink I'm lyin'. I'll fetch 'im 'ere on dis place if you feex it for hide you'se'f behin' dese post." He indicated a bundle of furs that were suspended against a pillar, and which offered ample room for concealment.

"Dere's goin' be no lies today."

He pulled himself together and went out, with the tired gait of an old man, his great shock head bowed low. A few moments later he returned.

"I've sent li'l' Jean for 'im. You get in der out of sight—an' wait."

(To be continued.)

Water for Chicks.

Perhaps one can scarcely overestimate the value of a constant supply of fresh clean water to the growth of the chick, says Helen Dow Whitaker, head of the poultry department of the Washington State college. By actual analysis water makes up a little over one-half of the body of the chick. Moreover, it serves the following purposes in the chick's ration:

1. To soften the food in the crop.
2. To dilate concentrated food.
3. To carry nourishment throughout the body.
4. To aid in digestion and assimilation of food.
5. To carry waste out of the system.
6. To regulate the temperature of the body.

Underfeeding stunts less than lack of water in warm weather. Dirty, stale or stagnant water makes an ideal and speedy carrier of disease germs and poisons throughout the entre system of the chick. In view of these facts, and in view of the price of water, can one afford to stint the supply?

The Evolution of Flour.

The conversion of wheat into flour was one of the earliest developments of civilization, and even the primitive races in the dawn of history submitted the grain to a coarse pounding between stones. Perhaps the oldest flour "mills" in existence are the rude stones found among the remains of the ancient lake dwellings in Switzerland. By a mortar and pestle arrangement the wheat was reduced to a coarse meal. Crude as this method was, it contained the germ of the modern flour mill. For countless centuries the preparation of meal and flour was a purely domestic process.

New Eats.

There are many new things to eat, and many new ways of preparing familiar foods. The American housekeeper must now become an adept in that knowledge of food that is the common heritage of the European housewife. They have never known the red meat diet of America, yet hardy sons of countries across the waters have built our railways and dug our subways. Food prejudice should not be allowed to stand in the way. Our great source of waste is the influence of custom. People are afraid to try new methods and new ideas. The housekeeper will find profit and knowledge in getting her recipes down to fighting trim.

The Secretary Bird.

The secretary birds gets its name from the tufts of feathers which grow exactly like a bunch of pens stuck behind a clerk's ear. The bird has long legs and large wings, with which it can ascend to a great height. It builds a strong nest in a tree, and lives in it year after year, subsisting on small animals and tiny snakes.

Hosiery That Pleases Everybody

Fleece-lined hosiery, to be comfortable, must be heavy. That's why Mother always buys Durable-DURHAM Fleece-lined Hosiery for everybody in the family. It has the substantial weight to protect in the coldest weather, the fleece is soft and silky and the cost is but 25 cents a pair.

DURABLE
DURHAM HOSIERY
FOR MEN, WOMEN AND CHILDREN
Is Made Strongest Where the Wear is Hardest

Not only is Durable-DURHAM made in fleece-lined, but also for all occasions and all seasons. It gives better wear, feels better and looks better. That's because of the strongly reinforced heels, soles and toes; the full-length legs; the wide elastic top that can't be pulled off or torn by garters; the smooth, seamless and even feet and toes; the correctly marked sizes, and the way the famous Durham dyes are fast—colors will not fade or turn green from wearing or washing; quality is uniform throughout.

Durable-DURHAM Hosiery is made in all weights for all seasons of the year and sells for 15, 19, 25 and 35c.

Ask your dealer to show you our women's 35c and men's 25c silk-mercerized hosiery with the patented anti-run stitch.

Ghirardelli's
Ground Chocolate

Comes in 1-2 lb., 1 lb. and 3 lb. cans.

D. GHIRARDELLI COMPANY

Since 1852 San Francisco

Dear Cousins: This is the close of our last contest for this year and many nice letters were received. The subjects given as an aid in helping to select a topic to write on, inspired many to write about our country, war, things to be thankful for, letters of sympathy and telling of their assistance in this great time of unrest and war.

I am glad so many of our girls are Red Cross helpers; the older girls can assist in knitting and making hospital garments for our soldiers. I hope that many of the cousins will show some kindness to the poor, lonely ones this Christmas. To make others happy does not mean spending money, but loving sympathy and kind deeds.

One of our girls mentioned a crochet and tatting contest. What do you think of it? Let Aunt Nellie know and if you want one, we will try to arrange it.

Many letters came from our "old" cousins as they noticed our little Corner growing smaller. We all want to keep it. To keep it we must all write letters—letters of real interest, if not on the subjects given, letters of what you do and how you do it; perhaps it may help some one who does not know and wants to know. Come to Aunt Nellie; she will help you all she can.

As I said, this closes our last contest for the year; letters that come in December and after this will be entered in our contest for January and February. So many nice letters were received! Such an improvement in writing and in every way—good expression, very few misspelled words.

In order to assist you in the next contest the following subjects are given:

Prize Winners.

Basil Millam, Menlo, Wash.
Vera Dale Peck, Republic, Wash.
Thusnelda Kilian, 2106 Ninth avenue, West, Seattle, Wash.

Roll of Honor.

Emma Aldrick, Selah, Wash.; Elna Mattson, R. 5, Box 32, Mt. Vernon, Wash.; Alfred Venneberg, Manson, Wash.; Edith James, box 114, Krupp, Wash.; Selma Lillquist, R. 5, box 89, Mt. Vernon, Wash.; Elva Green, Penawawa, Wash.; Violet Johnson, R. 5, box 33, Mt. Vernon, Wash.; Hilma Anderson, R. 3, box 19, Olympia, Wash.; Elizabeth Hamilton, Soap Lake, Wash.; Garretta Adriana DeBoer, R. 1, box 79, Lynden, Wash.; Jerome Gottwals, Gowan, Wash.; Nellie Smith, box 46, Albion, Wash.; Rosa May Millam, Menlo, Wash.; Harry Wegele, Wilson Creek, Wash.; Maple Schlief, box 33, Molson, Wash.; Ralph Stewart, R. 6, box 232, Vancouver, Wash.; Elsa Mattson, R. 5, box 32, Mt. Vernon, Wash.

A Letter From Cousin Harry.

Dear Aunt Nellie: This is the second letter I have written to the Corner and I enjoy reading the letters very much. We live on a 640-acre farm. We have seven cows and their names are Freckles, Dina, Nettie, Niff, Topsy, Cora and Lucy. We have 15 horses. We have two cats and one dog. The cats' names are Tommy and Teddy and the dog's name is Shep. I have six sisters and their names are Anna, Mollie, Lydia, Hattie, Margaret and Helen. I have one brother and his name is Edward. I am 8 years old and my birthda yis the 14th of September. I go to school. I like school very much. I like my teacher very much. Her name is Miss Hamilton. I have to go a mile and a quarter to school.—Harry Wegele, Wilson Creek, Wash.

Erma Aldrich Is a Cousin.

Dear Aunt Nellie: I have never written to the Corner before. I have two sisters and one brother. I am 9 years old. I will be 10 the 16th of December. Have I a twin? If I have I would like to hear from her. I am in the fourth grade. We have two cows and a little calf. It will be 4 weeks old soon. I like to ride horseback real well. We have a little rabbit. Almost every time we go by its pen it runs down its hole. Our teacher's name is Miss Newguard. We like her real well. We had a Thanksgiving program. My brother spoke a piece.—Erma Aldrich, Selah, Wash.

Dressed Their Dolls Like Pilgrims.

Dear Aunt Nellie: Hello! How are you? I am fine and dandy. Some of the girls have fine letters. I am 9 years old. My birthday is October 22. It will come every year. I guess every one's birthday comes every year. Doesn't yours? This time I have a good subject. It is Sewing at School. I like to sew. We are sewing some dresses for our dolls now at school. Our teacher said we could bring some dolls if we wanted to make Pilgrims of them. So I brought a doll. It is only a little doll. The teacher said it was all right. My sister did not want me to bring her doll. Now we are sewing some dresses for the dolls. I am sewing an apron for a doll. The apron that I am sewing is blue. I have finished my apron. Now I have to stop writing or else I won't get to go to bed.—Helen Anderson, R. R. 3, Box 19, Olympia, Wash.

Maybell Is a Real Twin.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope to see my letter in print. My name is Mabell and my sister's name is Annabell Van Hoy. We are 9 years old. I weigh 108 pounds and my sister weighs 107 pounds. We walk a mile to school. Our teacher's name is Miss Botford. We are in the third grade. My brother is in the sixth grade. There are eight scholars in our school. We have a dog. Her name is Topsy. We have three pigs and two cows and two calves. We have four horses and a colt. We live on an alfalfa farm along the Columbia river. If this doesn't find the waste basket, I hope I see it in print.—May Van Hoy, Hanford, Wash.

Gets Supper and Breakfast Ready.

Dear Aunt Nellie: I have written to the Children's Corner before, but I have never seen the last two in print. I suppose you never got them at all. We had a program at our school last Friday. I go to the public school. We ride to school in a bus. There was a girl wrote to the Children's Corner and she lived in Quincy. She said her teacher's name was Miss Ford and her teacher used to be mine. I wish she would write to me. I have to get supper every night and breakfast every morning for mama and papa while they milk the cows. We have closed Sunday school for the winter and we chose sides for a contest to work on all winter and I am the head of one side, which is the blues. The side that gets the most points gets a reward.—Lilly Wotton, Friday, Harbor, Wash.

Mary Is Eight Years Old.

Dear Aunt Nellie: I am eight years old. My birthday is the 19th of June. I am in the third grade. We have five horses, one colt, 13 cows, three pigs, five sheep, two dogs and four cats. Papa was driving cattle the other day horseback and the horse fell down with him and papa broke his arm in several places between his wrist and elbow.—Mary Thompson, Glenwood, Wash.

Nice to Live on a Farm.

Dear Aunt Nellie: This is the first time I have written to the Corner. I will be 9 years old the 4th of December. Have I a twin? I like my teacher. Her name is Miss Lee. I am in the third grade. I have two brothers, but no sisters. I have a little niece. Her name is Cleo. We have three horses and one colt. We have 16 cows and a pet dog. His name is Prince. I have lived on a farm all my life and think it very nice. —Alice Velma Clark, Bow, Wash.

A Fine Place to Play in the Sand.

Dear Aunt Nellie: I am writing to the Children's Corner for the first time. I am 7 years old. I have two sisters, Verda and Lucile. Verda is 9 and Lucile is 5. We live on a 240-acre farm. We have 23 cows, five horses and 50 hogs. Mama raises ducks and chickens. I go to the Hunters school. I am in the second grade. We live near the Columbia river. It is a fine place to play in the sand. Papa reads the Farmer. I hope he sees my letter in the Children's Corner.—Marion Moffat, Hunters, Wash.

Eva Is Making Christmas Presents.

Dear Aunt Nellie: I am in the fifth grade at school. Our teacher's name is Miss Hudson. We have 16 scholars. There are five boys and the rest are girls. Lots of the cousins have written to me. I am making quite a few Christmas presents. My subject is My Pets. I have a pet hen and her name is Petsy. I have three cats named Kitty Tom, Kitty Gordon, and Clove. Kitty Tom is black. Kitty Gordon is black and white, and Clove is black, and there is a spot of white under his neck. All of us have a pony. We drive her single in the buggy. Her name is Topsy. She is very small and very gentle. My brother and I can catch her. We live on a 100-acre farm. I like to write to the Farmer. I can not think of much to say. I wish some one would correspond with me.—Eva Boud, R. R. 1, Valley, Wash.

Ora Has Six Rabbits.

Dear Aunt Nellie: I have never written to the Corner before. I am 10 years old and will be 11, April 23. I am in the fifth grade. Have I a twin? I have a brother and a sister. Their names are Herbert and Helen. Herbert has a sow and seven litle pigs. I have six rabbits. I like to go to school. My teacher's name is Miss Dinsmore. We do not have a football at school. I live on a 40-acre farm. We have a 12-acre orchard. We have three cows and two horses. I walk one mile and a half to school. Our teacher is going to give a pair of skates away Christmas to the boy or girl who gains the most in arithmetic between now and Christmas.—Ora Baird, Sunnyside, Wash.

Enjoys Horseback Riding.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but think it will not be the last time. I am nine years old and in the fourth grade at school. My name is Eugenia Irene Tucker. I live on a 320-acre ranch near Almira. I am visiting my neighbors, Mr. and Mrs. W. C. Buxton, who live about a mile from our house. I have two sisters, June and Frances, and three half brothers. One will soon go to France. His name is Delbert Rice. Theodore and Roy Rice have gone to visit him at American Lake. How many of the little cousins enjoy horseback riding? I do, for one.—Eugenia Tucker, Almira, Wash.

Have a Nice Sunday School.

Dear Aunt Nellie. This is the first time I have written to the Children's Corner. I was 9 years old the 22d of November. I have two sisters, Marion and Lucile. Marion is 7 and Lucile is 5. We live on a 240-acre farm, one mile from the Columbia river. Papa has five horses, 50 hogs and 23 cows. We sell cream to the Hazelwood company. I like to read the Children's Corner. I am in the third grade at school. We have a nice Sunday school. I hope to see my letter in the Children's Corner. If I do I will write again.—Verda Moffat, Hunters, Wash.

Helps Mother and Daddy.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am nine years old and in the fourth grade. We live on a 240-acre farm. I chop the wood for mother and pile it all in the woodshed for mother and some times I take the horses over to the spring for daddy. We have 11 head of cattle, 22 horses and one dog and one cat. I have a mile and a half to go to school. Sometimes I ride.—Jerome Gottwals, Govan, Wash.

Go to a Country School Now.

Dear Aunt Nellie: I will write again to see how the cousins are. I have been very much interested in reading the letters of my cousins. Every time we get the Farmer I am most always the first one to read anything in it. I like the funny pictures in the funny paper. We went riding today in the car. We went to the top of the mountains, that is we did not go to the top of the highest peak, but we went over north. Then we went to Joseph and on up to the lake at Joseph. The lake is three miles long and one mile wide. We saw some men out on the lake on a skid going down the lake. We also saw a creek running up a steep hill. That is the first time I ever saw water running up hill. Mama just learned how to run the car today and she came awfully near running us into the barbed wire fence. I am going to learn to run it after a while. We go to the country school now. It is lots more fun. We girls seemed to get healthier since we left the town school and started in at the country school.—Mary and Hazel Young, Box 58, Enterprise, Ore.

Went to the State Fair.

Dear Aunt Nellie: This is the first time I ever wrote to the Children's Corner. I am 10 years old and my birthday is January 3. I am going to school with my two brothers and one sister. My brothers' names are Birdeen and Carlton and my sister's name is Alice. Have I a twin? If I have I would like to hear from her. I am going to school and we drive a one-horse rig. We live three miles from school. I am in the fifth grade. My teacher's name is Miss Stephens. She is a good teacher. I have joined the boys' and girls' club work and went to the state fair last year. I had a good time. There are 21 pupils in our school. We have a very small schoolhouse. It has only one room. I live on a farm of 180 acres. We have one dog, one cat, one colt, three pigs, three calves and two cows.—Elizabeth Brown, Box 111, Heppner, Ore.

Keeping the Boy on the Farm

By Ray W. Felton.

If you ever have occasion to correspond with F. Benz, the Yakima valley potato king, address your letter "F. Benz & Sons," because that is the way they run thing at the Benz farm near Toppenish. Mr. Benz has solved the problem of keeping the boy on the farm by giving his sons—seven in all—a real, monetary interest in everything he owns. Incidentally, Mr. Benz's seven grown sons are given credit for a large share of the success he has enjoyed since going to the Yakima valley six years ago. All the boys are at home, and have no thought of leaving it. Every one of them seems to find a real pleasure in the day's grind, and all intend to make farming their lifetime occupation.

Benz & Sons are farming approximately 300 acres, and next year they will have two more eighties. Their acreage is devoted to potatoes, alfalfa, sugar beets and wheat.

Mr. Benz's title of "potato king" comes largely as a result of the organization work he has done among the growers. He is president of the Yakima Valley Potato Growers' association, which has accomplished much in producing a superior grade of potatoes, finding a profitable market for them, and providing suitable storage facilities.

The accompanying picture shows Mr. Benz and five of his boys at the noon hour in front of a large, new warehouse on their farm. The building is a concrete frame structure, 60x100 feet, with a capacity of 600 tons of potatoes, 10,000 bushels of wheat and 300 tons of hay.

ILLUSTRATED DIRECTIONS FOR KNITTING.

Many of our women readers, who are looking for a chance to "do their bit," will be glad to learn that next week's issue of The Farmer will contain illustrated directions for making the knitted articles most needed by our soldiers at this time. These directions are taken from a pamphlet published by the American Red Cross Woman's Bureau at Washington, D. C., and so may be depended upon.

HOLSTEIN BREEDERS, ATTENTION

To prevent inbreeding, we must sell our wonderful herd sire, SIR BESSIE CORONA 122581, born Nov. 30, 1912.

Average of dam and grand-dam, 31.95 lbs of butter in 7 days.
Average of 11 nearest female relatives, 30.32 lbs. butter in 7 days.
Average per cent fat, 4.54.

A Grandson of the famous "Jessie Fobes Bessie Homestead," the first cow to make three 33-lb. records. His dam with the following three records for 7 days: 28.93 lbs.; 28.31 lbs. at 3 years. 6 mo. 25.01 lbs.

For sale at a reasonable price. Will exchange for a young junior herd sire if pedigree suits. Ballinghurst Farm, R.F.D. No. 2, Linnton, Ore., H. A. BALLIN, Mgr.

News for Breeders

Hercules, the pure bred Shorthorn steer owned by Day & Rothrock, Sprague, Wash., that won first honors in his own breed and grand championship in all breeds at the Northwest Live Stock show at Lewiston, Idaho, was entered at the Chicago International to try conclusions with the eastern entries. Jack Napier, Day & Rothrock's competent herdsman accompanied him.

Wayne Dinsmore, secretary of the American Percheron society, was an interested visitor at the Northwest Live Stock show at Lewiston, Idaho. Mr. Dinsmore watched the judging of the Percherons. He afterwards said the northwest had as good horses as any other region of the country, but that breeders had some things to learn about showing horses. He spoke in the big tent Saturday afternoon and, reviewing horse conditions caused by the war, showed that in war as in nearly all industries the horse is an absolute necessity and that no machinery can take his place in some lines. He told how Belgium is almost depleted of horses and how they will be short in all Europe when the war ends, and predicted a successful future and good prices for American draft horse breeders.

Crimson Monarch 2d, the grand champion Duroc Jersey boar at the California State fair this year is a full brother to Elizabeth's Perfection, grand champion at the Oregon State fair, owned and shown by E. F. Naftzger, Gervais, Ore. Referring to Crimson Monarch 2d the Duroc Bulletin says: "He is a boar of great stretch, with perfect top and body, standing on nine-inch bone." Mr. Naftzger, who has used Elizabeth's Perfection as herd sire for two years, is naturally proud of the fact that his champion hog is in such good company, and Charles Hoover of Gervais, who bred both hogs, gets much satisfaction from the winnings. Mr. Hoover sold Crimson Monarch 2d during the Panama Pacific Stock show. He showed his mother, Crimson Elizabeth, and won grand championship at that show with her. Two other Durocs bred by Mr. Hoover were winners at the California fair, Bondholder 13th winning first and Orion Golden Col second in the senior yearling class.

J. C. Brown & Sons, Jersey breeders of Shedd, Ore., filled a 100-ton silo from 12 1-2 acres of corn this fall. This is the corn referred to in the Farmer some time ago as planted on the 12th of June and promising a good crop with no rain whatever. A nice little rain did come on the 15th of September, which helped considerably in making good-sized, well-filled ears. The corn was cut October 12, just four months from the day it was planted. Mr. Brown had already saved his seed corn from it and it was mature enough for good seed. Most of the corn was Oregon-raised Minnesota No. 13, with a few acres of Golden Glow. Eleven acres on well-manured clover sod yielded far heavier than six acres not manured which followed a cultivated crop. None of it was heavy of stalk or fodder, as the tonnage indicates, but all was well-eared, especially that on manured land, and has made excellent silage. All of which helps to show the adaptability of a corn crop in the Willamette valley, especially in dry years. H. A.

Carload of Guernseys.

Fourteen members of the Clackamas County Guernsey Cattle club in Oregon signed up for a carload of stock which has been selected in Wisconsin by E. L. Westover, dairy husbandman of the Oregon agricultural college and by J. T. Whalley of Portland, who was sent east by the club. Writing of the purchase of eight head of purebred heifers from one breeder in Whitewater, Wis., Mr. Westover says: "They are all daughters of one bull." Adding, "The breeder from whom we purchased these animals has 35 of this bull's daughters on test that are going at the rate of 450 to 700 pounds butterfat at two and three years old. This bull's dame has a record of 645 pounds of fat as a 2-year-old."

THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's

Caustic Balsam

IT HAS NO EQUAL

For the Human Body —It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions, CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

A Perfectly Safe and Reliable Remedy for Sore Throat, Chest Cold, Backache, Neuralgia, Sprains, Strains, Lumbago, Diphtheria, Sore Lungs, Rheumatism and all Stiff Joints

REMOVES THE SORENESS--STRENGTHENS MUSCLES

Cornhill, Tex.—"One bottle Caustic Balsam did my rheumatism more good than $120.00 paid in doctor's bills." OTTO A. BEYER.

Price $1.50 per bottle. Sold by druggists, or sent by us express prepaid. Write for Booklet R.

The LAWRENCE-WILLIAMS COMPANY, Cleveland, O.

CUTTER'S

BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Dec. 10.—Severe cold that hampered teaming from farms and also handicapped the railways tended today to make the corn market average higher. Prices closed unsettled, January $1.20⅝ to $1.20¾ and May $1.19, with the range as a whole varying from ¼c off to ⅞c advance, compared with Saturday's finish. Oats gained 1⅛c to 1⅜c and provisions 30c to 50c.

Corn traders gave first attention to the outlook that continued low temperatures meant considerable slowing up of the crop movement and furthermore implied an increase of feeding demand. On the resulting bulge in prices, however, buying was not of an aggressive character, and it was pointed out that the prevailing cold weather was fine for the conditioning of corn. Something of a setback followed, owing in part to prospects that the embargo on shipments to the east would lead in the near future to a rapid accumulation of stocks here. The fact, though, that offerings were readily absorbed in the late dealings evoked a fresh rally as the session came to an end.

Oats paralleled the action of corn. The visible supply total showed a decided falling off on account of large reductions at seaboard points.

Cash Quotations.

CHICAGO, Dec. 10.—Corn—No. 2 and 3 yellow, nominal; No. 4 yellow, $1.45@1.60.

Oats—No. 3 white, 72@73c; standard, 72½@73c.

Seattle Market.

SEATTLE, Dec. 8.—There has been some increased inquiry for spuds, due to the easier market conditions and jobbers have hopes that activity from eastern buyers may start a brisk movement toward the end of the month.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle;

Eggs—Local, 48@50c per dozen; pullets, 40c dozen.

Poultry—Live hens, fat, over 4 lbs., 21@22c per lb.; 4 lbs. and under, 18@19c; old roosters, 15c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 15c per lb.; springs, live, fat, 20c per lb.; hens and young tom turkeys, dressed, 28@29c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 16@18c per lb.; heavy, 12@13c per lb.

Veal—Fancy, light, 14@16c per lb.; heavy, 9@13c per lb.

Hides—Salted, 18c per lb.; flint-dry hides, 32@33c per lb.; salt kip, 18c per lb.; green hides, 15c per lb.; green calf, 28c per lb.; dry calf (under 5 lbs.), 34c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry full wool sheep pelts, 36@38c per lb.; salt bulls, 14c per lb.

Seattle Wheat.

SEATTLE, Dec. 8.—The government is not buying any wheat in this market, but its representatives in this territory have advised millers that it is preferable for them to consume what was placed in storage before the embargo against further arrivals was put on rather than to draw on the supply in the country. The request is regarded as a command. A little grain is moving from the country on the government's purchases for eastern account, but the volume is not heavy.

Receipts of wheat by water at San Francisco for November from Washington were 16,430 centals, and by rail from Oregon 28,600 centals.

Seattle millers, after considerable investigation in the county report that there will be very little winter wheat in the northern Washington districts. A little has been planted in the Walla Walla grain belt, and with this exception the wheat crop of the state will be an all-spring proposition this season. Successive dry falls, wherein farmers have been sowing $2 seed wheat in the dry dust, has discouraged for the time being all efforts to get a crop.

Portland Wheat.

PORTLAND, Ore., Dec. 10.—The feed grain markets eased off somewhat at the close of the week in response to the declines in the east, and bids were few in number. Barley is expected to continue steady, however, owing to the larger use of the cereal in bread making.

The mill feed market continues in a strong position with prices inclined to go higher rather than lower. The mills do not expect to catch up on their orders before the close of the month.

BUTTER AND EGGS.

PORTLAND, Ore., Dec. 10.—Butter—Prints, extras, 45@49c, cubes, extras, 45@45½c; prime firsts, 43½c; dairy, 33c; butterfat, No. 1, 52@53c.

SAN FRANCISCO, Dec. 10.—Butter—Fresh extra, 45c.

Eggs—Fresh extras, 49c; fresh extra pullets, 40c.

Cheese—New firsts, 21½c; young Americas, 25c.

CHICAGO, Dec. 10.—Butter—Higher; creamery, 36@47½c.

Eggs—Higher receipts, 30,769 cases. Firsts, 47@50c; ordinary firsts, 43@46½c; at mark, cases included, 43@49c.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $1.50 cwt.; sweet potatoes, $3.25@3.50 cwt.

Apples—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.85@$2.25; Winter Bananas, $2 box; Jonathans, $1.25@1.75; Wageners, $1.35@1.65 box; Rome Beauties, $1.25@1.60 box; Spitzenburgs, $2 box; King Davids, $1.25@1.35 box; Grimes Golden, $1.35@1.65 box; Staymen Winesaps, $1.75@2 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 32@33c lb; brick cheese, 34c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

Eggs—White filler, guaranteed, $13.25 case; selected storage, $12.50.

Live Poultry—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 12c lb; turkeys, 22@25c lb; local turkeys to retailer, 32c lb.

Dressed Poultry—Hens, 18c lb; broilers, 20@21c lb; old roosters, 11c lb; ducks, 17c lb; geese, 14c lb; turkeys, 27c lb.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 15c; salted cured, 17c; green bulls and stags, 12c; salted cured, 15c; kip, 15 lbs. to 25 lbs., 20c; calf skins up to 15 lbs, 28c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 1 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

The Wool Market.

BOSTON, Dec. 7.—The Commercial Bulletin will say tomorrow:

"The formation of the new war board in Washington, with the consequent resignation of the committee on wool supply of the council of national defense, has had a tendency to slacken trade in the local wool market, although prices are very firmly maintained, especially on medium and low sorts.

Scoured basis:

Texas: Fine 12 months, $1.68 to $1.72; fine eight months, $1.55 to $1.60.

California: Northern, $1.70 to $1.75; middle county, $1.55 to $1.60; southern, $1.45@1.50.

Oregon: Western No. 1 staple, $1.80 to $1.82; eastern clothing, $1.50 to $1.60; valley No. 1, $1.60 to $1.65.

Territory fine staple, $1.80 to $1.85; half-blood combing, $1.75 to $1.80; three-eighths-blood combing, $1.45 to $1.50; quarter-blood combing, $1.30 to $1.35; common and braid, $1.03@1.07; fine clothing, $1.60 to $1.65.

Pulled: Extra, $1.80 to $1.85; AA, $1.70 to $1.80; A supers, $1.60 to $1.65.

Portland Market.

PORTLAND, Ore., Dec. 8.—Orders for dressed turkeys for shipment to Alaska made their appearance at the close of the week, buyers offering 28@29 cents. The orders will hold open throughout this week. Live poultry has become firmer with a better demand and limited receipts. Dressed pork continues weak, but veal is stronger.

The egg market is in a most unsatisfactory condition. The gain in receipts has not been large, but the demand has fallen off sharply and prices are on the down grade, with a few sales of fresh ranch as low as 46 cents. Storage eggs are being pressed for sale and 5 cents is an outside quotation, with few buyers at that price.

Butter is still scarce and firm. Cheese men talk of a probable advance soon, but it is known that stocks at primary points are heavy.

The potato market has in no way improved. Shippers are generally offering $1 at country points and do not want many at that. On the street last week's prices are still quoted, but the movement is light.

Hop men believe that the decline in prices has been checked and that the market will begin to advance about the first of the year. There are only a few thousand bales left in the northwest and the short sellers are beginning to worry. The new regulations of the food administration, cutting down the alcohol content of beer to 3 per cent, are believed to mean a much larger necessary use of hops as a preservative to the beer. The output, according to the Washington authorities, will be normal and there are not enough hops to go around, according to the accepted statistics.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $55.50 per ton.

Millstuffs—Bran, $38 per ton; shorts, $36.

Barley—No. 1 feed, $54; brewing, $55; rolled, $58@60.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24; grain $24.

Eggs—Oregon ranch, case counts, 46@48c per dozen; candled, 50@55c.

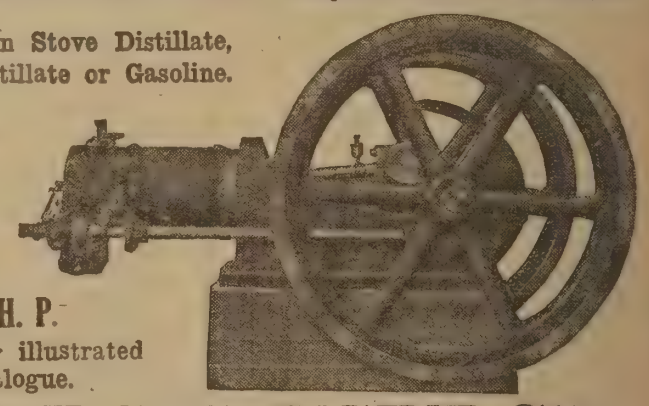
Poultry—Hens, 17@20c; ducks, 18@20c; turkeys, live, 20c; geese, 13@14c.

Butter—City creamery, prints, 45@49c per pound; cubes, extras, 45c. 44 1-2c.

Cheese — Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 15 1-2@16c; pork, 18@18 1-2c.

Hops—1916, 14@15c; 1917 crop, 16@20c.



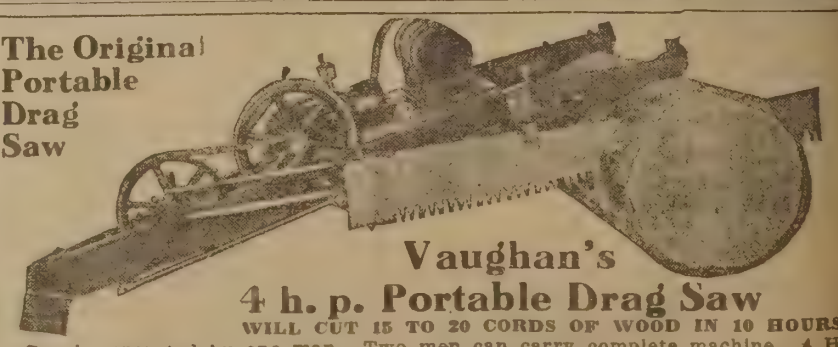
Potatoes—Oregon, buying price, $1@1.25 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 55@60c.

Beans—Buying prices: Oregon white, 8@9c; colored, 7@8c.

DOAK ENGINES Simple, Reliable, Efficient

Operate on Stove Distillate, No. 1 Distillate or Gasoline.



Made in Sizes 5 to 240 H. P.

Write for illustrated Catalogue.

DOAK GAS ENGINE CO.

503 H Market St., San Francisco, Cal.

The Original Portable Drag Saw

Vaughan's 4 h. p. Portable Drag Saw

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 4 H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $150 f. o. b. Spokane and common points. FOR SALE BY

Washington Machinery & Supply Company

8122 Monroe. SPOKANE, WASHINGTON.

President Pleads Humanity's Cause

(Continued from page twenty.)

ishness. While we have eliminated profiteering in several branches of industry, it still runs impudently rampant in others. The farmers, for example, complain, with a great deal of justice, that, while the regulation of food prices restricts their incomes, no restraints are placed upon the prices of most of the things they must themselves purchase; and similar inequities obtain on all sides.

Additional legislation may also become necessary before the present congress adjourns in order to effect the most efficient coordination and operation of the railway and other transportation systems of the country; but to that I shall, if circumstances should demand, call the attention of congress upon another occasion.

The World United.

It is because it is for us a war of high, disinterested purpose, in which all the free peoples of the world are banded together for the vindication of right, a war for the preservation of our nation and all that it has held dear of principle and of purpose, that we feel ourselves doubly constrained to propose for its outcome only that which is righteous and of irreproachable intention, for our foes as well as for our friends. The cause being just and holy, the settlement must be of like motive and quality. For this we can fight, but for nothing less noble or less worthy of our traditions. For this cause we entered the war and for this cause will we battle until the last gun is fired.

I have spoken plainly because this seems to me the time when it is most necessary to speak plainly, in order that all the world may know that even in the heart and ardor of the struggle, and when our whole thought is of carrying the war through to its end, we have not forgotten any ideal or principle for which the name of America has been held in honor among the nations, and for which it has been our glory to contend in the great generations that went before us. A supreme moment of history has come. The eyes of the people have been opened and they see. The hand of God is laid upon the nations. He will show them favor, I devoutly believe, only if they rise to the clear heights of his own justice and mercy.

The congress of Vienna, to which President Wilson referred in his message, was held from September, 1814, to June, 1815, for the purpose of settling the affairs of Europe at the close of the Napoleonic wars. It was attended by the monarchs of Russia, Prussia, Austria, Denmark and Bavaria and smaller German states, and by representatives of England, France and Belgium.

Among its chief stipulations were:

The retention by France of the boundaries existing at the outbreak of the French revolution, the restoration of the Austrian monarch without Belgium, Breisgau and West Galicia, but with the addition of Venetia and Dalmatia; the formation of the German confederation under the hegemony of Austria; the creation of a new Poland under the Russian dynasty; the establishment of a kingdom of The Netherlands, including Holland and Belgium; the retention of Norway by Sweden; the retention of Finland by Russia and the reconstruction of the Swiss confederacy with enlarged limits. Under these stipulations many cases were brought under the sovereignty of rulers of a different nationality.

Saving Eggs for Incubator.

To produce good eggs for hatching, the flock should not be forced by a stimulating ration, but should be fed abundantly and encouraged to take plenty of exercise, according to J. G. Halpin and J. B. Hayes of the Wisconsin Agricultural Experiment station. The eggs should be carefully handled to keep them from deteriorating before they are placed in the machine. Unfavorable temperatures should be avoided and while incubating, the conditions should be kept as near ideal as is possible.

When an incubator is used, it is customary to keep eggs for hatching until enough have accumulated to fill the machine. Eggs that are held in a cool room at a temperature of about 50 degrees can be kept for ten days or two weeks without serious injury. The fresher the eggs, the quicker they hatch, and the larger the chicks produced. For these reasons, keep the eggs only as long as is necessary. Many people would have better results if they would use two small incubators that could be filled with fresh eggs, or in some cases three small machines and start one each week. A large machine can be operated successfully when only partly filled, but unfortunately the average person will not start an incubator until he has eggs enough to fill it. When keeping eggs for hatching it is usually better to keep them on an egg tray or padded table top and to turn all of the eggs each day. Where hens are used for hatching, it is not usually necessary to hold eggs long except in cases of definite breeding work.

Choice Game Section.

British Columbia, Oregon and Washington have long been known to a limited number as one of the choicest spots in America in which to bring down the bear, the deer and the mountain sheep, to say nothing of the smaller game, including geese, ducks, grouse, quail and the wonderful Chinese pheasants. Hundreds of sportsmen aim to hunt each year for a period of from two weeks to one month in British Columbia, Oregon and Washington.

Only recently F. A. Soller and G. A. Gloyd, two residents of Thurston county, Washington, while riding in their automobile to a favorite hunting place in the Bald Hills, found themselves but a short distance away from a feeding ground where were assembled a small herd of deer. A fine 200-pound buck stood erect on a knoll, giving the landscape the once over. Soller lowered the windshield of the car while Gloyd reached for his gun in the rear of the car. The buck very accommodatingly waited, and Gloyd brought him down with the first shot.

Swedish Potato Crop Normal.

The potato crop of Sweden for this year is estimated at 1,800,000 metric tons, or about the average of that of the last five years. A press report on the crop stated that 80,000 tons should go to the starch factories, 60,000 tons for evaporation, 280,000 tons for seeding, 860,000 tons for human food, 340,000 tons for cattle feed, and 180,000 tons calculated to be lost through rotting.

Qualified.

Teacher (to the Sunday school class): "Children, can any of you tell me what Ananias did?"

Little John Henry (thinking that she referred to the gentleman's occupation): "He wrote the weather reports!"—Harper's Monthly.

Seven 18-Mile Trips to Town by Motor Truck in One Day

That is what Mr. Walter Faber did with his Maxwell one-ton truck during the last season.

Mr. Faber is a successful farmer living nine miles out of Wayne, Nebraska.

He believes in applying business methods—efficiency methods—to agriculture.

So last spring he bought a Maxwell one-ton truck.

In that truck he hauled to market EVERY-THING his farm produced. Said Mr. Faber:

"I made seven trips into Wayne and back each day with my Maxwell truck—just five more than I could possibly have made with horses."

Among the crops truck-marketed by Mr. Faber were corn, oats, wheat, hay, potatoes, etc.

He hauled 10,000 bushels of shelled corn—55 bushels, that is, 3080 pounds, to the load.

That was more than 50 per cent overload.

Mr. Faber's truck cost no more to keep going than one team of horses.

Now most of his neighbors are planning to buy Maxwell trucks.

What are you going to do? Continue using slow, expensive horses? Or buy a low-priced, economical and swift Maxwell Truck?

Your nearest Maxwell dealer has the trucks. See him.

One-ton truck chassis, $985; Chassis with cab and windshield, $1025; Chassis with box body, $1035; Box body with windshield, $1075; Express canopy body, $1095; Chassis with stake gate body, $1080

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO. 51. DECEMBER 20, 1917. WEEKLY.

LEST WE FORGET

AND it came to pass in those days, that there went out a decree from Cesar Augustus, that all the world should be taxed.

(And this taxing was first made when Cyrenius was governor of Syria.)

And all went to be taxed, every one into his own city.

And Joseph also went up from Galilee, out of the city of Nazareth, into Judea, unto the city of David, which is called Bethlehem, (because he was of the house and lineage of David,)

To be taxed with Mary his espoused wife, being great with child.

And so it was, that, while they were there, the days were accomplished that she should be delivered.

And she brought forth her firstborn son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn.

AND there were in the same country shepherds abiding in the field, keeping watch over their flock by night.

And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them; and they were sore afraid.

And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people.

For unto you is born this day in the city of David a Saviour, which is Christ the Lord.

And this shall be a sign unto you: Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

And suddenly there was with the angel a multitude of the heavenly host praising God, and saying,

Glory to God in the highest, and on earth peace, good will toward men.

AND it came to pass, as the angels were gone away from them into heaven, the shepherds said one to another, Let us now go even unto Bethlehem, and see this thing which is come to pass, which the Lord hath made known unto us.

And they came with haste, and found Mary and Joseph, and the babe lying in a manger.

And when they had seen it, they made known abroad the saying which was told them concerning this child.

And all they that heard it wondered at those things which were told them by the shepherds.

But Mary kept all these things, and pondered them in her heart.

And the shepherds returned, glorifying and praising God for all the things that they had heard and seen, as it was told unto them.

Are You a Christmas Member of the Red Cross?

Girls Take Places Left Vacant

Three Sisters Do the Chores When the Call of War Takes Their Brother to the Training Camp; Also Do Their Share of Field Work

MARIETTA, Whatcom County, Wash., Dec. 6.—Price regulation has not made much material change in this immediate vicinity. The setback of [illegible] price has reduced the prices of [illegible] some. I do not think [illegible] on all commodities, [illegible] no reduction in the price of feed, and the supply seems to be ample to carry over. In this immediate neighborhood young stock have had pasture up to the first snow, of a few days ago. Farmers can make a reasonable profit on hay at $12 per ton, but dairymen are the only ones who can afford to buy it at that price and make a profit by it. A few farmers in this community have purchased hay cutters and are cutting hay and straw up fine and mixing it with grain for stock feed. As yet I have heard no reports on the results of the venture. In this immediate neighborhood five farmers' sons have been called into service. In one case the farmer has sold his horses, cows and wagons, and in other cases help had to be hired. In one family the only son was called, and his three sisters have to do the chores and the milking. They were all on the inside of the silo doing the tramping down at filling time.

S. B. MAYHEW.

Can't Sell Wheat.

METHOW, Okanogan County, Wash., Nov. 26.—Fall work is up to the normal of the last three years, as they have all been too dry to seed or plow. No crop losses here. The farmers are "Hooverizing" because they can not help it. They did as the government asked them to do, raise all the wheat possible, and turned it over to the government as buyer. That was over 60 days ago. There are 4000 tons of it at Pateros and the farmers can not get a cent on it. They argue on the scarcity of wheat, then why don't they move it? There is no other substitute for wheat for hog feeding but corn, which is selling for two cents a pound. As the warehouse refuses to receive any more wheat until the government moves some of it, the wheat will be fed to hogs as they will bring the money to pay the bills. No experiments or community developments have taken place that I know of here.

CHARLES GRANT.

Can't Buy Feed Profitably.

RAINIER, Thurstday County, Wash., Dec. 8.—I have not heard of any particular complaint on the price-fixing of the government. The check put on the high speculative price of wheat and its products has met with favorable comments and has saved many a small flock of chickens and helped out on the dairy feed. If prices are fixed on all the products of the farm, the farmer should have a guaranteed market for his products, if not the following year there is likely to be a shortage in production. As to date I do not know of a single buyer or offer to buy potatoes in this locality this season. Potatoes here are in small lots from two to 15 tons. There may be a good demand for them toward spring. Last winter buyers were in here buying by the car lots. Wheat can be kept from year to year, while potatoes can not. The mild winter, so far, has had a good effect on the feed proposition. Today I turned in young stock from the pastre that had not been fed extra feed and the yearlings were in good condition. I think a large part of the farmers will have enough hay and feed to take them through the winter. I do not think, with the common run of cows, that a man can buy all his feed at present market prices and make any profit out of it over and above his labor. That is, with the regular amount of cattle he has to keep, including fresh cows, cows long in lactation, dry cows, heifers, calves and bull. But the farmer must try and raise all the feed he can. I, for one, am planning for a silo next year. I keep a financial record with my cows, both as to expense and receipts, but have not kept an account of the labor and cost of raising the feed for them. Many of the farmers raise roots, turnips and kale to feed with the hay for green feed, as that is usually gone by the middle of winter, then it is just hay until grass in the spring. I think silage would come the nearest to filling the bill for succulent feed all winter and help keep up the milk flow. There are six or more farmers that have gone from this locality into the army or navy. These boys were of age and doing for themselves, and the parents were proud of the fact that their boys could serve their country. The weather is mild, with a modest amount of rain.

L. F. DAVIS.

Pruning Next in Order.

OMAK, Okanogan County, Wash., Dec. 10.—Owing to a late, dry fall, seeding is very backward. Most all other fall work is completed. Pruning will start in about four or five weeks. No crop losses have come to my knowledge. Farmers are doing all they can to save for the aid of the war. Alfalfa hay is being used for hog feed, but some grain is given along with it.

J. O. WOODS.

Mountain Seems Spiked.

PACHUCA, Mexico.—There is a mountain near Pachuca which has the appearance of being covered with spikes. They are natural formations of rock, the origin of which is involved in mystery.

Community Cooperation

Each for All Is Community's Best Motto

Just what is community cooperation anyhow? Who does it benefit? How does it help the individual?

Let us see. Any community whose residents band together and through the strength of their combined effort accomplish things from which all are benefited is practicing community cooperation. If this community spirit—this working of each for the good of all—is continued harmoniously the result in the long run is bound to be good for all.

Villages, towns and communities are rated as "live" or "dead" according to the rate of development they show. One man or one family can not make a community progressive. It takes a majority. You can not take the attitude of indifference if you wish to see your home town classed as a live town. The harder you and all your neighbors fight for progress the surer you are to reap the good that progressive teamwork brings. A good, wide-awake town is a sure sign of public-spirited, wide-awake citizens living in it and around it.

The spirit of "let well enough alone" never accomplished anything. The spirit of "let's make things better" is a sovereign remedy against retrogression.

One way of bettering your home town is open always and to all. This is it: Keep your trade as nearly as may be in your own town. As we have pointed out before, a good portion of every dollar spent in your local stores helps in the support and development of your own neighborhood. Increased local business makes possible more public conveniences, more educational, religious and social advantages, and, as a natural consequence, increases individual opportunity and wealth.

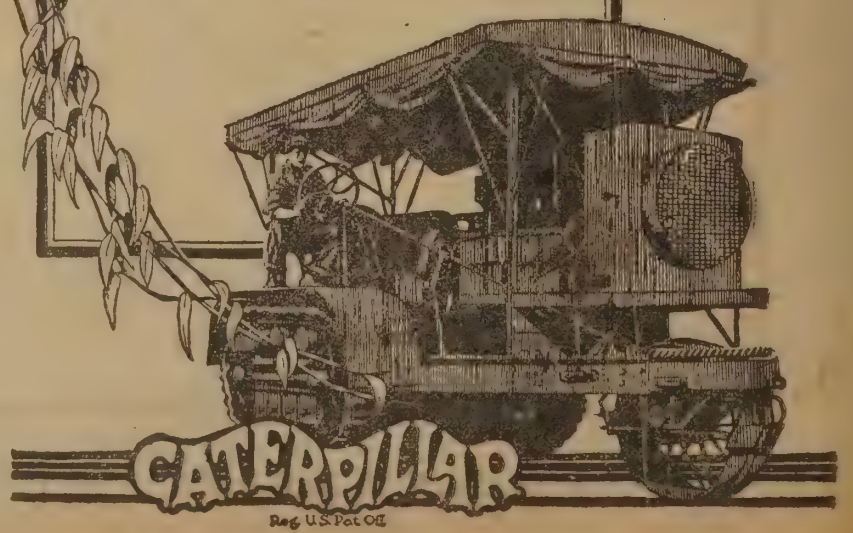
EXPERIENCE

There's but one Caterpillar Holt builds it



Years of Caterpillar-building—thirty-four years of tractor-building experience—and today Holt is acknowledged the world's greatest tractor manufacturer.

Thirty-four years' experience in tractor-building has developed the most expert workmen, the strongest, longest-lived construction, the greatest tractive power, found only in Benjamin Holt's great invention, the Caterpillar.

The result to the Caterpillar owner is lowest cost per working hour—and therein lies the Caterpillar's success.

We will gladly send you details on all models

Red Cross Is Winning

Every Man, Woman and Child Should Join It

The people of America are rallying at this Christmas season to the call of the Red Cross. The nation-wide campaign for 10,000,000 new members by Christmas eve promises to win. Thousands in this state are becoming members, but the goal has not yet been reached. The slogan is: "Every man, woman and child should be a member."

Leaders in every walk of life have indorsed the movement for an unprecedented increase in members during this campaign and are working with the campaigners. Governors everywhere have urged the taking out of memberships.

Governor Lister of Washington says: "The Red Cross is the one great humanitarian factor in alleviating the suffering caused by the present world war, and to whatever extent an individual lends his aid to that extent is he or she helping to alleviate that suffering."

Governor Withycombe of Oregon says: "There is hardly any surer or quicker means of sending comfort and cheer to the boys 'over there' than through the humane agency of the Red Cross."

Governor Alexander of Idaho says: "Our people have responded heroically to every call made by the nation, and we can go forward with the assurance that there will be no slackers in so worthy a cause as the Red Cross."

The Washington Farmer is joining in the campaign and urges its readers to do their bits in this great work. Fill out the coupon herewith and mail it to the Editor of The Washington Farmer, Spokane, Wash. Upon receiving this coupon The Farmer will be glad to send you the desired information regarding Red Cross work, and in recognition of your pledge of patriotism to your country will enroll you as a member of the Patriotic League of the Washington Farmer.

I am glad to express my patriotism at this time by pledging myself to render whatever special service I can to my country, and will you tell me especially about Red Cross work and the different ways in which I may be able to aid in that work?

Land Bank Raises Rate

Loans Will Bear Five and One-Half Per Cent

Official announcement was made recently by the federal farm loan board at Washington, D. C., that on and after December 6, loans made by the land bank would bear 5 1-2 per cent interest instead of 5 per cent as has been the case. At the same time comes an unofficial announcement that the board is asking congress for an appropriation of some $50,000,000 with which to establish a fund for the purchase of land bank bonds when necessary to stabilize the bond market.

It is probable that in this latter announcement lies to considerable extent the explanation of the increase in interest rate. Under the land bank law the money to make loans comes through the sale of bonds. These bonds are secured by the mortgages given by borrowers to secure their loans. Hence, if, for any reason the market for the bank bonds becomes unstable, the power of the bank to lend money to the farmers becomes likewise unstable.

Certain it is that there is an unprecedented financial condition existing in the world today. The United States has just floated Liberty bonds to a total of nearly $6,000,000,000, a stupendous amount of money.

Whatever the exact conditions may be that have caused the farm loan board to increase the rate of interest and consider establishing a big fund with which to purchase bonds, it is certain that both actions are for the purpose of insuring the success of the farm loan system, regardless of what unusual conditions may arise in the financial world.

That the bank is a success in unqualified terms is indicated by the fact that the northwestern branch, located at Spokane, Wash., has actually placed in the hands of the farmers more than $6,000,000. President D. G. O'Shea says that by Christmas more than $7,000,000 will have been loaned.

"If the farm land bank never loaned another dollar; if it went out of business right today, it would have more than justified its creation," says President O'Shea.

Regarding the change in interest rate, President O'Shea says that all loans approved by the bank, and duly accepted by the borrower will be closed at the old rate of 5 per cent. All loans approved on and after December 6 will bear 5 1-2 per cent interest, the new rate.

The land bank law provides that under no conditions shall the rate of interest be greater than 6 per cent.

"The farm loan board can be depended upon to reduce the interest rate to the lowest point that can be charged, dependent on the bond market and the cost of operation," says President O'Shea. "Payments will be on the amortization plan, the same as under the old rate, and the added amount will be very little on each semi-annual payment.

"Any borrower can refund his loan any time after five years. Under this system the borrower can not be asked to pay, but he is the one who determines whether to pay or not, and can pay and ask for a new deal at any time after the loan is out five years."

Food Survey

Will Be Started at Early Date

The United States department of agriculture announced on Monday morning that the war emergency food survey provided for by congress will be started within the next few days when the first batch of more than three-fourths of the millions of questionnaires will be placed in the mails. This survey will touch every dealer in food and food material, every food manufacturer and every holder of substantial quantities of food in the country, except the families, requiring them to report stock which they have on hand December 31, 1917. The questionnaires include blanks for answers in regard to 26 items covering more than 100 different foods. The bureau of markets has charge of the survey and the act provides a fine not exceeding $1000 or imprisonment not exceeding one year, or both, as punishment for any individual or concern who wilfully fails to make reports when requested or wilfully reports incorrectly.

Whatcom County Council.

The Whatcom county agricultural council, which was organized during October, consists of delegates from each agricultural organization in the county. The membership of the council now numbers 38 and is divided into committees for the purpose of assisting the county agricultural agent and for the betterment of agricultural conditions in the county.

The next meeting of the county council will be held Saturday, December 29, at the office of the county agricultural agent; at this time the work for the coming year will be taken up.

Demonstration Schools.

Beginning the first week in February a series of demonstration schools will be held in Whatcom county, under the direction of the county agent. The extension workers will be secured from the extension department, State College of Washington, Pullman, and the western Washington experiment station at Puyallup.

Jersey Breeders Organize.

An organization of the Jersey cattle breeders of Whatcom county has just been perfected. The membership, though not complete at present, consists of 30 breeders of purebred Jerseys. The officers are as follows: President, Cyrus Gates; vice president, Dr. L. G. Beebe; secretary treasurer, E. F. G. Carlyon.

Inspectors of Weights.

The secretary of state has named Bert F. Snyder, deputy superintendent of the weights and measures division, and a corps of eight inspectors to work with Charles Hebberd, federal food administrator for Washington, and the latter has designated these men from Mr. Howell's office as field agents in his department.

The War Program in a Few Words

HERE is the war-winning program. It is the official food regulations as sent by Charles Hebberd, state food commissioner, to each county council of defense chairman:

FAMILIES—One wheatless meal each day; two meatless meals each day; meatless Tuesday; wheatless Wednesday; porkless Saturday.

HOTELS and Restaurants—Meatless Tuesday; wheatless Wednesday; porkless Saturday; individual sugar service of two medium lumps; individual bread service of two ounces.

EVERY ONE—Use less wheat; use less sugar; use less fats; use less meat; use less bacon.

Wheat Convention

Program at Pullman January 3-5

The following is a copy of the program for the coming wheat convention at the state college at Pullman, which will be held January 3, 4 and 5, 1918. Professor E. G. Schafer, who sends the program, writes that it might be somewhat rearranged, but for the most part it will appear as herewith indicated:

Program.

President's annual address, R. J. Stephens, Spokane, Wash.

Address of welcome, E. O. Holland, Pullman, Wash.

"Method of Handling Grain by the Federal Government," Max Houser, Portland, Ore.

"Substitution of Grains Other Than Wheat for Bread Making," William T. Harshman, Spokane, Wash.

"Tillage Methods for Summer Fallow," A. M. Richardson, Pullman, Wash.

"Value of Alfalfa and Clover to Wheat Growers," R. C. McCroskey, Garfield, Wash.

"The Propagation of Wheat," M. Harshman, Reardan, Wash.

"Comparative Smut Resistance of Washington Wheats," E. F. Gaines, Pullman, Wash.

"The Most Effective Methods of Controlling Smut," F. D. Heald, Pullman, Wash.

"Conserving Food Supplies," Charles Hebberd, Spokane, Wash.

"The Effect of Different Test Weights per Bushel on Milling Value." R. T. Lord, Spokane, Wash.

"The War, Shipping and the Railroads," Charles S. Albert, Spokane, Wash.

"The Federal Grain Grades," representative federal bureau markets.

"The Relation of the Wheat Grower of the Northwest to Other Grain Producing Territories and Allied Nations," Robert Insinger, Spokane, Wash.

"The Tractor and Wheat Production," representative Holt Manufacturing company.

"Methods of Cropping to Maintain Wheat Yields in the Northwest," representative International Harvester company.

"Live Stock Profits in Connection With Wheat Growing," Alex Morrison, Valley, Wash.

"Live Stock in the Northwest," John H. Roberts, Spokane, Wash.

A Queer Duck.

C. M. Brocks, a hunter of Prairie du Chien, Wis., shot a queer duck in the wild rice of Mississippi. The bird is pure white from head to tip of tail and has red eyes.

Would Change Standards for Grain

Farmers Contend for Federal Inspection at the Interior Points

Government officials invited grain growers, millers and warehousemen to a hearing on the federal standards for grain at the Spokane Chamber of Commerce Monday, December 10. The meeting was presided over by George Livingston, in charge of federal grain supervision work. E. G. Boerner, supervisor in charge of appeals and disputes, was present as was L. M. Jeffers, supervisor in charge of the Portland office. Several hundred farmers packed the chamber of commerce assembly room, assailed many points of the federal grain standards and asked many changes in the rules and regulations affecting standards for grain.

It was brought out more than once during the hearings which continued throughout the morning and the afternoon that some of the things complained of are under the jurisdiction of the federal food administration, over which the bureau of standards have no control. The meetings were held to hear suggestions and no action was announced.

Members of the farmers' union were present with a well organized program. Millers and grain buyers also took a hand, and there are frequent clashes. Near the close of the day a heated argument took place when J. C. Lawrence attacked the federal food board's policy of allowing interested buyers, as he claimed, to sit on the committee which fixes prices at Coast terminals. R. J. Stephens defended the committee, saying they did not know whose grain they were passing on. Chairman Livingston expressed surprise, saying it was the first word of criticism he had heard concerning such committees.

The liveliest point during the whole day was the plan to have federal inspection of grain at interior points instead of at the Coast entirely. The farmers were unmistakably in favor of such plan, and many suggestions were made concerning how to do it.

Dockage Is Sore Point.

Another lively discussed point was that of dockage, many claiming they were docked for other matter in their wheat, which had a value, and they not only got nothing for the dockage but were charged for the cleaning.

A proposal to make No. 2 wheat the basis for price was suggested by buyers and hotly contested by some farmers. In this connection Professor George A. Olson of Washington State college predicted the time would soon come when wheat would be bought on the basis of gluten content.

The first point taken up was a regulation regarding the samplers who secure the grain from shipments on which inspectors at terminals establish the grade of the grain. It seemed to be the opinion of the meeting that these samplers should be under federal license so they could be held responsible.

Discounts for Off-Grade Grain.

The question of light weight grain came up early. Mr. Jeffers asked if there had been any more discount than usual this year on account of off-grade grain and a dozen men shouted "yes!" One man asked Mr. Jeffers if he thought 59-pound wheat was worth 3 cents a bushel less than 60-pound wheat.

"I asked you to keep away from food administration rules," was the sharp response.

W. W. Harrah of Pendleton said the shipper doesn't get the full benefit of federal inspection because he can not hold the sampler responsible, not being under federal control.

The question of time for appeal from federal inspection was taken up and C. W. Nelson said 48 hours only was allowed, which was too short. The time is set to get action before the identity of the grain is lost, it was said, but Mr. Nelson declared the identity was lost often before the grade was placed on it by the inspector, as he works by the sample only. J. C. Lawrence demanded a change in the law, saying that if the sampler were under federal license then the grade would be made on the sample and not on the entire car, as the sampler would be responsible.

Shows Spirit of Protest.

"This big meeting of farmers here shows the spirit of protest at the law," he declared.

Mr. Mertens of Mansfield said they have 2,000,000 bushels of wheat to ship from there every year and demanded that the government place an inspector there. He said the manager of their warehouse is competent to inspect the grain, but Mr. Jeffers told him the law would have to be changed, as it now provided that the inspector should have no interest in the grain. Mr. Nelson favored making local managers of warehouses inspectors. Mr. Potter of Benge and A. C. Whisler of Garfield favored interior inspection.

Would Require Two Inspections.

J. L. Neil of Spokane asked if interior inspection would be final or another would be required on the Coast. The opinion was that two would be necessary. William Kirkman of Walla Walla said local buyers would be likely to grade down if they were inspectors.

"Keep on this wrangling and you'll have the government stepping in to handle all the grain," declared Mr. Walker of Waukon. "That is just what we want," returned Kirkman.

Mr. Trimble of Whitman county asserted that the inspectors, or some one on the Coast, took out the other grain in wheat and did not pay for it.

Must Grade at Warehouse.

Almer McCurtain of Davenport said the warehouseman had to grade all the wheat that came in anyway, and had to satisfy the farmer as well as the buyer on the Coast. He thought the local man could do better than an outsider. He declared the proper method would be to license the local man as an inspector.

"If you want a change as to inspection," Mr. Jeffers said, "you must change the federal standards law itself, and it may be necessary to get a ruling of the supreme court to do it. I should like to have you name a committee to put your ideas into proper form."

It was agreed this should be done.

Handle Grain in Bulk Next Year.

Here Mr. McCurtain was called to the chair and outlined the need for a convention to plan bulk grain handling next year. He called on G. L. Hurd of Portland, who said:

"Our government will requisition 60,00,000 bags for war purposes next year. Canada is taking all they can get. In the Argentine republic they are short on bags and are taking steps to handle the situation. There they are delaying threshing and storing grain in bulk on farms. The government is arranging to loan money on it. Great Britain will requisition 900,000,000 bags, and has prohibited the export of all jute and all jute bags from India. Even if there were no embargo on export from India there are no ships to carry them here. The national council of defense of this country is now urging the conservation of bags. It takes five months to complete an elevator, and we must get quick action to be able to handle the grain."

Another suggestion was that the elevators put up now be standardized. Mr. Kirkman moved that a bulk handling convention be called, and it carried.

Says $2 Was Guaranteed.

At the afternoon session J. C. Lawrence read portions of the law guaranteeing a price of $2 for wheat in 1918, and called attention to the expression "principal interior primary markets." He said this meant the markets where the farmer sold his wheat, and that President Wilson had said he signed the bill with the understanding the farmer was to get $2 for his grain. Mr. Livingston ruled this out of order, saying the grain standards bureau had nothing to do with it. Mr. Lawrence responded:

"If under the present law grading of grain has nothing to do with dockage and prices, then we should implore congress to change it."

Points in the grading law were then taken up in detail. One rule provides that if wheat contains more than 6 per cent of grain other than wheat it shall not be classified as wheat. J. M. Moulton of Wilbur said the farmers would change this, allowing up to 50 per cent of other grain and still call it wheat, but designate the other grain in the shipment. R. J Stephens, for the buyers, said they favored about the same thing. E. G. Boerner said the reason 6 per cent was designated was to make it conform to the federal food and drugs act. G. I. Toevs, Spokane miller, said after the other grain got above 6 per cent it would not make flour properly.

Standards Suit Millers.

On the regulation as to mixed wheat A. C. Whisler said the farmers would not cut the discount below the lower grade of wheat in the mixture. Mr. Stephens would vary somewhat from the farmers' contentions, and Mr. Toevs said the present standards on this point suited the millers.

Professor Olson said he had tested five samples ranging from 2 to 10 per cent of red wheat in white varieties, and had found practically no difference in the milling quality. The red wheat had not lowered the nitrogen content, and the gluten content was about the same in all the samples.

Smutty wheat brought much discussion. The farmers recommended that the definitions and grades of smutty wheat in paragraph "B" of the grain laws of Washington be dropped, but paragraph "A" remains in effect. Mr. Livingston said in the east the farmers wanted it just the reverse.

When to Take Test Weight.

Mr. Livingston said they ought to determine whether the test weight for grade in smutty wheat should be taken before or after cleaning and smutting. Another split came here, when R. T. Lord said it ought to be secured before smutting, but after cleaning. Mr. McCurtain said the weight ought to be taken after cleaning and smutting.

Regarding "treated" wheat Mr. Stephens said the grain buyers had nothing to suggest. Mr. McCurtain, for the farmers, said they would not change the grade on account of it if there were less than 50 per cent in a shipment. He said "treated" wheat could not be kept apart from other kind in the interior elevators. Mr. Toevs said 10 per cent is all that ought to be allowed. He said wheat has to be ground as soon as it is washed, but several contradicted him on this.

Farmers Propose Weights.

D. W. Tomlinson handled "factors in grades" for the farmers. He said they decided on the weights as follows: Fifty-eight pounds to the bushel for classes 4, 5 and 6 for No. 1; 60 pounds for class 3, and on class 1 and 2 they took no action. The latter two do not affect this territory.

Mr. Stephens advocated 59 pounds for No. 1 Red Walla, 58 pounds for No. 2 and 55 pounds for No. 3. It was here Mr. Stephens sprung his proposition to buy on the basis of No. 2 wheat, as is now done in the east, he said, and created much discussion.

Farmers seemed to think they would not get as much for their high class wheat under such a system. Mr. Lord took up the discussion from a miller's point of view, and said it made no difference to them because they bought the wheat for its milling value. He submitted figures on the basis of $1 a bushel for wheat, and said he took off 2 cents a bushel every time the grade dropped. At $2 this would simply double. It didn't make any difference whether they started with No. 1 or No. 2. On a $2 basis one mill he knew of made a "spread" between 58 and 52 pound wheat of 22 cents a bushel.

The government asked:

"Shall the maximum limitations for total damage, heat damage, total inseparable foreign material and special limitations for inseparable foreign material be changed, and if so, what changes are asked?"

Mr. Moulton replied they were all about one class too high. Mr. Jeffers submitted figures to show that only nine out of 844 samples had been graded off on account of damaged kernels. Mr. Nye, a shipper, of Pullman, said he had had more than that himself. The farmers submitted the following:

"That of total damaged kernels No. 1 wheat could carry 4 per cent; No. 2, 7 per cent; No. 3, 10 per cent; No. 4, 15 per cent, and No. 5, 20 per cent."

After hearing the suggestions Mr. Livingston said it was evident no change was needed. Mr. Harrah asserted that they got no pay for cracked wheat taken out as dockage, but Mr. Livingston said if such was the case it was not the fault of the standards, but of the application of them. Mr. Lord asserted that only the small and useless particles were not paid for.

Commenting again on the wide "spread" of 3 cents a bushel between 58 and 60 pound wheat, Professor Olson suggested a sliding scale, so a man who had 59½-pound wheat would not be cut to No. 2 prices.

The last subject considered was the "split" certificate. This is where several farmers ship in the same car, or where there are several varieties or grades in the same shipment. This is the understanding here, but in the east it is different. G. L. Neil favored issuance of such certificates when requested, saying they were a necessity in the Palouse.

Mr. Kirkman closed the meeting with an appeal to the government to treat the wheat grower fairly, saying it was necessary to encourage the production of wheat as much as possible.

Release Experienced Farmers

By Training Two Million Youths, 19-21 Years

A. J. Macker, county farm adviser in Lehigh county, Pa., declared the other day that at least 1000 men must be released from the draft if that county is to produce anything like normal crops next year. Mr. Hacker says farms are being abandoned because of the inability of the farmers to secure help.

Not only is farm labor being drawn away by the draft, but in many sections it is lured away by the offer of higher wages in the munitions factories and other wartime industries.

T. S. Cooper, owner of a large Jersey cattle-breeding farm at Coopersburg, Pa., said the rising price of milk is due to well-defined economic causes. "A farmer receiving 12 cents a quart for milk can afford to pay help $2 a day, but he can not get the help at that price when munition plants are paying more than doube that amount. The result has been a deplorable slaughter of cattle."

Mr. Cooper expressed the opinion that it will require six years to breed enough cattle to make milk cheaper.

If necessity drove the nation to this sacrifice something could be said for it. But, as Lieutenant General Young and other high military authorities have shown the president and congress, the method is both unnecessary and militarily unsound. Instead of drawing away skilled workers in wartime industries, taking them from highly productive service and putting them in training where they not only cease to be productive, but become for a long period a positive burden on the country, we should start immediately the training of 2,000,000 available youths of the ages of 19, 20 and 21 years, now exempt from call under the present draft law.

There are about 3,000,000 young men in these three classes, and military authorities estimate that nearly 2,000,000 of them could pass the physical, mental and moral examination. As a class they are without dependent obligations, and where employed in business or industry hold places of slight responsibility. They are at the athletic period of life, and the period when military training is most readily taken.

It is not proposed that any of these youths shall be put on the firing line before they are 21, but that their necessary training shall be started now, so that they will be ready for service at 21 or 22.

This is one of the most important acts of legislation now before congress concerning the farmer, the manufacturer and the whole nation as well. For unless provision is made to put these younger men under the draft, the tendency will constantly increase to take older skilled labor and married men from the factories and the farms.

The reasons for the proposed amendment were stated in a few words by Secretary of War Baker the other day:

"I have believed all along," said Mr. Baker, "that boys of 19 at least should be subject to draft. At that age they are physically developed enough to make good soldiers and they have not assumed any of those responsibilities which made the drafting of older men a disturbance economically throughout the nation."

The civil war was fought by youths under 21. We are drafting our armies now from men ranging from 21 to 30, and taking volunteers of yet older ages. The country ran to one extreme in the civil war, an extreme The Farmer would not for a moment approve; but it is apparent that we are swinging now to another extreme that threatens the productive powers of the nation, and which, if continued, might lose the war.

Harmony and Work Mark Farm Convention

Probably the Greatest Convention in History of the Farmers' Union Is Held in Spokane

The ninth annual convention of the Farmers' Educational and Cooperative Union of America, division of Washington and northern Idaho, was the most enthusiastic, determined and altogether successful session in the history of the division. This is the unanimous verdict of those attending. Not only was the attendance larger than usual, but the interest was greater, the spirit of concord more evident and the problems faced and acted upon were even more vital than those that have been faced by other conventions. More than 300 farmers were in attendance at least part of the convention days. The convention assembled in Spokane Tuesday, December 11, and adjourned on Thursday, December 13. As a prelude to the convention proper some 300 farmers, millers, dealers and shippers of grain met with representatives of the United States department of agriculture, markets division, on Monday and for seven hours threshed out problems pertaining to the grading of grain under the new federal grain standards act.

Why Is Feed So High?

The farmers of this district, though distinctly loyal to every movement for the increase of governmental efficiency at this critical time in the country's history, are flat-footedly inquiring why certain things are so, and are demanding that they be righted. For instance, the convention at Spokane wanted to know if the food administration is actually limiting the profit that millers may make on the manufacture of flour and feed? why feed is soaring to price heights that make the feeding of it to stock almost prohibitive? They propose to find out, as indicated in the following resolution, which was adopted:

Whereas, The government food commission has announced the policy of limiting the flour mills to a 25-cent profit per barrel of flour and a 50-cent profit per ton on mill feeds, and

Whereas, Four and one-half bushels of wheat produce approximately 70 pounds of mill feed and one barrel of flour, yet, nevertheless, the price of mill feed has been advanced to a point that threatens to destroy the stock-feeding industry; and,

Whereas, The government food commissioner has urged the increase of the production of live stock as a war necessity:

Therefore, be it resolved, That the secretary of this convention be instructed to address a letter of inquiry as to the cause of such advance in the prices to H. C. Hoover, national food administrator, and to T. B. Wilcox, Coast representative of the food commission; and

Be it further resolved, That the secretary of this convention transmit such information as he may receive to the several local secretaries under this jurisdiction.

The Labor Situation.

Though there was at no time any unpatriotic criticism of the mobilizing of farm laborers, including the boys and young men from the farms, for the ranks of the army and navy, the problem of avoiding serious handicap to the farming industry as a result of such mobilization was a theme much discussed.

As a result a resolution was adopted urging that the government parole or grant leaves of absence to soldiers still in this country at seed time and harvest time next year, such concessions to be made with the explicit understanding that such soldiers should report at once to the farms to insure the planting and harvesting of the large crops which the government is anxious to have produced.

The exemption of farmers, farmers' sons or farm laborers from military duty was not favored by any considerable number of delegates, owing to the fact that it would appear as an unpatriotic sentiment, and would, if put into effect, constitute the exemption of a certain class of men, which would be an undemocratic action.

So far from sounding a note of disgruntlement, the convention went vigorously on record as solidly behind the president and the government in the conduct of the war to a successful conclusion. A part of the resolution on this matter reads:

"We pledge the support of our organization in the matter of conducting the war, not only by stimulating the patriotism and loyalty of those who are related to us and are of proper age to join the colors, but by making every possible effort to increase the production of the farm for the support of our army and the allied armies of Europe."

Fix Machinery Price, Too.

The government has fixed the price of wheat, whether the grower in the northwest gets the full price agreed upon or not. Why, ask the farmers, should not the price of the things which the farmer has to buy be fixed also? The high prices of machinery with which to produce the increased crops that the nation needs inspired the convention to adopt the following resolution:

Whereas, The government has fixed the price of wheat, be it resolved, that we ask the government to fix a reasonable price on farm machinery and all other things necessary to produce farm crops.

No Grain for Liquor.

The farmers, true to their well recognized convictions that the liquor traffic has no place in a nation where efficiency is desired, took the following vigorous action on the manufacture of intoxicants from the grain that they produce:

Realizing the seriousness of the conditions and the importance of conserving all the grain possible to feed our own army and that of our allies,

Therefore, be it resolved, That we ask our national president and the food administration to withhold all grains and sugar from being used in the manufacture of any beverage containing alcohol."

Plain Facts Should Be Known.

Another resolution adopted urges upon the food administration the advisability of securing reliable information relative to the conditions affected before establishing regulations governing the northwestern states. In order to secure this information it is urged that the food commission send a personal representative to the northwest "for the purpose of making a thorough investigation among the people actually engaged in farming operations." The resolution charges that much misinformation has been placed in the hands of the food commission regarding the yields and cost of production on the farm lands of the northwest, especially of the lighter soils. It expresses the belief that "if present conditions are not remedied a considerable shortage in the number of acres devoted to wheat production will result in 1919."

Would Unite More Closely.

Throughout the entire convention there was a prominent sentiment finding expression in favor of a more close union between the local organizations and the state organization and between the various state organizations of the northwest. This sentiment found expression officially in the following two resolutions:

"Whereas, The great need of getting our organization on a more substantial footing, and realizing that if we are to succeed in any form of reorganization or amalgamation, this state organization must have the most hearty and loyal support from our individual locals,

"Therefore, be it resolved, That this convention go on record as pledging ourselves to a program that might be worked out to bring about this reorganization by our state boards of Washington and Oregon, together with our terminal board.

"Whereas, Our sister state of Oregon and south Idaho have made such a far-reaching study of our conditions in the entire northwest,

"Whereas, By resolution passed at their state convention held at Pendleton, Ore., on December 7 they have extended to us the right hand of fellowship and of true cooperation in bringing about a re-

(Continued on page sixteen.)

Above are shown the new officers of the farmers' union of the Washington and northern Idaho division. From left to right they are: Front row—B. F. Brewer, Walla Walla, Wash., vice president; A. A. Elmore, Spokane, Wash., president; E. D. Knight, Wapato, Wash., member of executive committee, and H. J. Herman, Genesee, Idaho, member executive committee. Back row—A. D. Cross, Spokane, Wash., secretary-treasurer; Almer McCurtain, Davenport, Wash., member board of directors fire insurance company and fraternal delegate to the federation of labor; R. H. McMillan, Sandpoint, Idaho, and G. M. Thompson, Dayton, Wash., members board of directors fire insurance company.

Organize for the Future, Says President Elmore

President-elect A. A. Elmore of the farmers' union of Washington and northern Idaho, predicts great changes in national life following the conclusion of the war, and urges preparation on the part of the farmers to meet the conditions that he foresees. The following is a statement by President Elmore to the readers of the Farmer, made following the adjournment of the big convention in Spokane:

"We would be pleased if we could have the general public understand what the farmers' union is trying to do, for the reason that public opinion has a great deal to do with shaping and controlling, not only our institutions, but all other public institutions.

First, I would like to tell you what our farmers' union is not trying to do. We are not trying to tear down or uproot any legitimate organizations or institutions in the community. We are not trying to oppose our government in the successful prosecution of this war, but on the other hand we are trying to assist and cooperate with our government which to my mind is the greatest government there is in all this world.

"We are trying to encourage and assist legitimate business. We are trying to teach our farmers the principle of organized and scientific marketing. To do this we necessarily had to get into a very important piece of business, one that naturally tramped on somebody's toes, namely, the grain business.

"It is useless for me to say to you that we have succeeded; the results speak for themselves, but I would like to stress the importance of the farmers being thoroughly together and organized from another standpoint.

"It is almost universally agreed that at the close of this war there will come about drastic readjustments and radical changes from the former system of doing business. No one can tell just at this time what form these changes will take, but I feel absolutely sure that our economical life is going to be entirely changed and different from what it has been in former years. To this end I would like to impress on every farmer the value of organization.

"The action the farmer takes at the close of this war will have such a far-reaching effect on future generations that no one can estimate its value. You certainly can understand the tremendous forces that will be organized and brought into action for their own selfish interests, that will be present in the readjustment and the reshaping of the new basis of trade which must necessarily come, and that the unorganized farmers will be at such a disadvantage that his interests will be entirely lost to sight.

"I maintain the congress of the United States did one of the greatest things for the farmers of this country that has ever been done when they said there should be no more gambling and speculation in the wheat pit for the season of 1917 and 1918. I believe the farmers will have the greatest opportunity of their lives through organized effort to help figure out a new basis for trade, which will be fair both to the producers and the consumers of this country. For the farmers to fail at this time is tantamount to saying we do not care for future generations."

OFFICERS ELECTED.

President—A. A. Elmore, Spokane, Wash.

Vice president—B. F. Brewer, Walla Walla, Wash.

Secretary - treasurer — A. D. Cross, Spokane, Wash.

Executive committee—H. J. Herman, Genesee, Idaho, and E. D. Knight, Wapato, Wash. (to serve two years).

Directors of Farmers' Union Mutual Fire Insurance company—H. J. Herman, Genesee, Idaho; E. D. Knight, Wapato, Wash. (both for two years); Almer McCurtain, Davenport, Wash.; R. H. McMillan, Sandpoint, Idaho, and G. M. Thompson, Dayton, Wash.

Delegate to national convention—C. W. Boothe of Nez Perce, Idaho; L. C. Crow, Pullman, Wash., alternate.

Fraternal delegate to state federation of labor—Almer McCurtain, Davenport, Wash.

Fraternal delegate to state grange—L. C. Crow, Pullman, Wash.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Something New In Swindling

National and state governments are making it increasingly difficult and dangerous for swindlers to ply their nefarious arts with the investing public. However, something new in the swindling world is reported from San Francisco, and it is gratifying to report that the officials got quick action and suppression.

For falsely advertising and demonstrating a device called a "butter merger" at the San Francisco land show, the demonstrator was convicted and sentenced to pay a fine of $250 or spend 250 days in the city jail.

The man who was selling this device claimed that it would make two pounds of butter from one pound of butter and one pint of milk. Professor E. J. Lea, director of the state food and drug laboratory, testified that he had visited the booth conducted by the defendant and observed numerous women completely deceived by the statements of the demonstrators. He said that pure food standards require 80 per cent butterfat, but the product made by the "butter merger" contained less than 50 per cent butter.

It would be thought that the fallacy of a scheme to make two pounds of butter by mixing a pound of fat and a pint of milk would have been apparent to any person of even ordinary intelligence. The scheme could not have been much more preposterous if it had purported to make a quart of milk by "merging" a pint of water with a pint of real milk.

It is not likely that any farmers were caught by this coarse bait. It is more likely that the victims were city women of the poorer classes eager to bite at anything that offered a means of reducing the high cost of living.

Fixes Price of Sisal Fiber

When the news came the other day that Mr. Hoover had fixed the price of sisal fiber at 19 cents a pound at gulf ports, and authorized the purchase and distribution of 100,000 bales, no doubt many city readers wondered what connection existed between the sisal fiber industry in the Mexican state of Yucatan and the work of the United States food administration.

But the farmers, particularly the wheat growers, understood the connection. They knew that binder twine is manufactured from sisal, and that the price of binder twine, which is one of the factors that determine the cost of growing wheat, enters into the cost of living in the United States.

One half of this purchase of 100,000 bales has been allotted to the American Harvester company, which manufactures more than 60 per cent of the binder twine used in the United States.

The sisal production of Yucatan is controlled by a cooperative association of growers that is fostered by the government of that state. It is marketed by the Comision Reguladora, a Yucatan government body, and the natural and most profitable market is in the United States.

In view of the fact that this monopoly had been under indictment in the United States courts, and had put itself at the mercy of the food administration by rushing more than 200,000 bales into gulf ports while ships were available for its transportation, Mr. Hoover has dealt with it on a basis of fairness and liberality.

The law empowers the president to control imports, exports and storage not only of foodstuffs and fuel, but of "equipment required for the actual production of foods." The 200,000 bales and more of this sisal were practically under government control, and Mr. Hoover was in a position to name almost any price that the owners must take. The agents of the Yucatan government seem to have convinced him that 19 cents was a reasonable price.

On the other hand, if it had not been for the enactment of the food and fuel control law, the Yucatan government, acting for its sisal growers and having a monopoly of the product, could have extorted a much higher price.

This transaction illustrates the far sweeping effects of the control law. Directly or indirectly the government can lay the hand of control on distant industries and distant people.

Save Your Receipts

One of the easiest things to secure is a receipt for money when it is paid. Nobody objects to giving one. It costs nothing and calls for no difficult performance. It is customary to give them. Nobody refuses to give receipts. They do not take up much space.

We could relate dozens of true stories of men who have lost considerable money because they took no receipts when they paid cash, or who threw the ones they did receive away. We could tell as many of money saved by those who had the receipts filed and could produce them.

It is not always the dishonest man who asks for money which has been paid already. Bookkeeping may be a science in theory, but many mistakes are made in it and an account which has been settled may have no credit. These are errors which are likely to happen to anybody, for they have happened to a great many in the past.

Does it seem foolish and unnecessary to sound this warning? Our readers would be amazed if they knew the proportion of people, city and country, who have failed to protect themselves when protection was offered to them.

Old Things Pass Away

It is not a reflection on our grandfathers and grandmothers that we do things differently. Times have changed. If grandfather were alive and farming today, if he were a good farmer he certainly would use improved methods, for grandfather was a man who took the best available and worked as skillfully as he knew how. It was not his fault that farm machinery was not developed; he did not use a sickle or a cradle in harvesting because he liked those crude instruments, but because they were the best he had; he did not select his seed because nobody had suggested it.

And the same with grandma. Her cooking in the fireplace was done because it was the best available way. How gladly she would have welcomed the big range, the fireless cooker and other improvements which are making their appearance in our modern kitchens.

And we, their grandchildren, are not worthy of them if we do not make the best possible use of all the advantages around us.

The Retired Farmer

A good deal of complaint arises from farmers who have been experimenting with unskilled labor. Some of them say the labor which rushed from the city to the farm is more trouble than it is worth. A good many people who were willing enough know nothing of farm conditions and farm work.

There is a class of men which could be of immense assistance right now. We refer to the retired farmer, many of whom are just in their prime, but who have accumulated enough of this world's goods to make it possible for them to stop working. They are good farmers, fully able to make splendid crops.

Will they come back? We think a great many of them will respond to the call of their country and form a corps of experts in the trenches at home.

Washington Gleanings

Omak has shipped 291 cars of apples this fall, which averaged close to 1000 boxes to the car, and orchardists have received $144,000 in return.

North Yakima will have a municipal pig farm and fatten several hundred porkers on garbage if the new city council indorses a plan proposed by C. B. Kemble, sanitary inspector.

The sheepmen of Washington, in convention at Seattle recently, guaranteed their support in the building of a railroad 65 miles long in the Methow valley, from Pateros to Winthrop.

Beet sugar produced in the state of Washington is not to be shipped to other states for the present, at least, according to the latest order of the United States food administration.

Authorities say that not to exceed 1500 cars of apples remain in the Wenatchee valley. There is ample storage for the apples still on hand, so that no fear of zero weather is entertained.

After an agitation lasting several years the county commissioners of Franklin county have entered into contract with the state agricultural college whereby the farmers of the county will have an experienced agriculturist.

The newly organized Grays Harbor County Agricultural council, which is made up of representatives from nearly all of the farmers' organizations in the county, have voted to recommend the specialization on one or two particular varieties of potatoes.

With a representative of each of the various farmers' organizations in the county in attendance, the first annual meeting of the Cowlitz County Agricultural council was held at Kelso recently. The improvement of various conditions in the farm world came up for discussion.

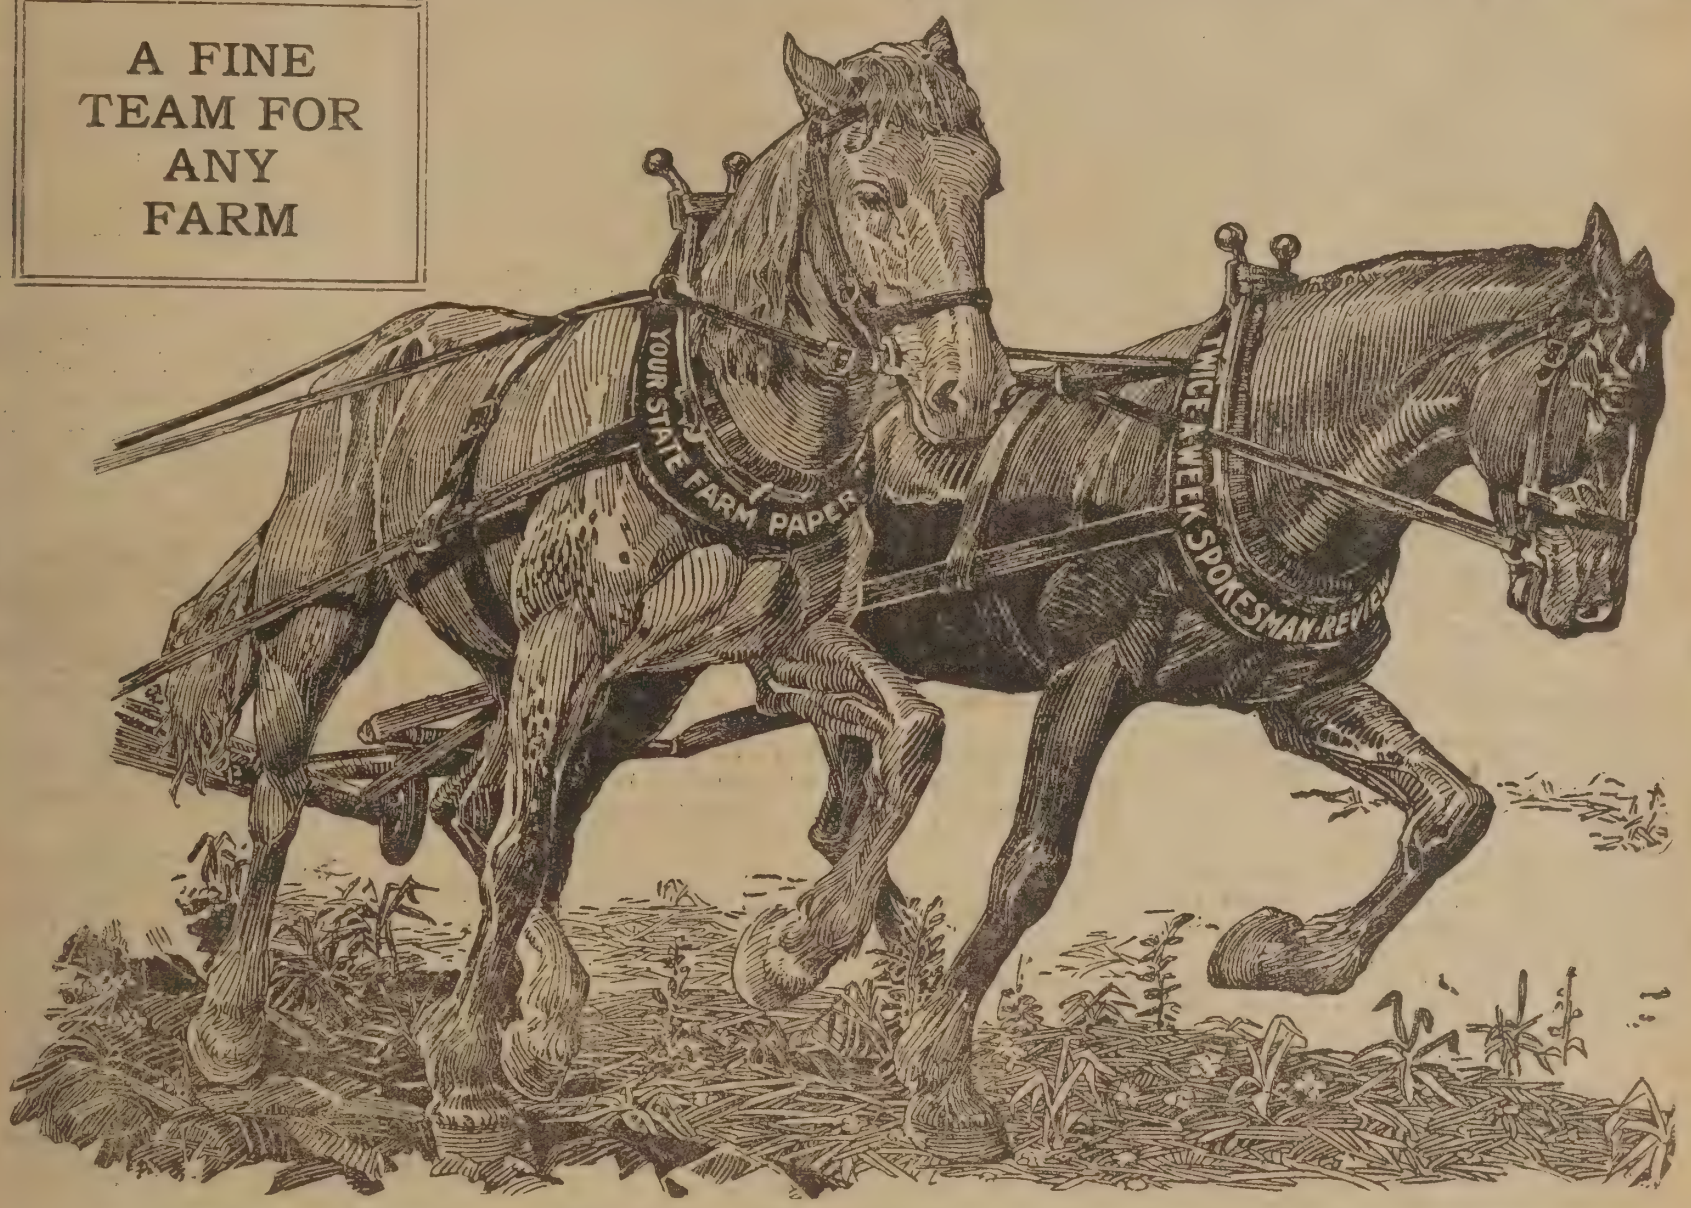
Development of a 60-acre tract of logged-off land into a truck garden tract and also for the production of flowers and hothouse vegetables has been started by James Goman and his son of Aberdeen, who were interested in the line of work in England before they came to the United States three years ago.

Farmers in the Four Mile neighborhood near Colfax wanted their road improved and 12 of them, with an engine and 18 head of horses, went after it. The work was done under the direction of a foreman furnished by Supervisor E. C. Taylor. The only cost to the county was the foreman and the oil used in the engine.

What Others Say

Farm and Home: The farmer's best friend is a lead pencil, persistently employed in making black entries on the white pages of an account book.

Breeders' Gazette: Cleaning the barn is a suitable rainy-day job. Less dust flies on a damp day, and when it rains the time can be spared from field work.



Prairie Farmer: The lives and the comfort of millions of people, perhaps even the decision of the great war itself, depends upon the efforts of the American farmer. Let us not be found wanting. Let us show our patriotism in our bumper crops.

Hoard's Dairyman: Everywhere we can see that just in proportion as the dairy farmer has grown to a better understanding of how to produce clean, sanitary dairy products, has the consumption of those products increased and the business of dairying been made more profitable.

A SPLENDID COMBINATION

TWO PAPERS THAT ARE PULLING FOR YOU

A FINE TEAM FOR ANY FARM

Twice-a-Week Spokesman-Review for One Year
The Washington Farmer for Three Years---Both for **$1.00**

We feel sure that this clubbing offer will appeal to a great many of our readers. The Twice-a-Week Spokesman-Review is a semi-weekly newspaper which brings a complete, condensed and thoroughly reliable review of local, state, national and international news. It is an ideal publication to have in combination with your state farm paper.

The Twice-a-Week Spokesman-Review is sold at a regular, established rate of $1 per year. As our readers know, their state farm paper can be secured for three years for 50 cents. Our special clubbing rate of $1 for both publications is therefore seen to be extremely liberal. With everything else going up in cost we are glad to offer you such a material saving on your reading matter. Address

The Washington Farmer, Spokane, Wash.

Why Test Cows?

Association Helps in Many Ways

By M. O. MAUGHAN, State College of Washington.

Recent years have shown a material growth in the development and organization of cow testing associations throughout the United States. They were first established in 1905 when a group of progressive dairymen in the state of Michigan organized into an association to promote their dairy interests and make their herds pay bigger dividends. The results were so surprising and valuable that the farmers became highly enthusiastic. Cows which they had insisted were their best ones were shown up to be their poorer ones and on the other hand cows which were looked upon as being good ones to sell were found to be the better ones.

Cow test association work therefore grew from the very first and today there are hundreds of associations throughout the country, with Wisconsin leading, having about 60 associations. Washington has nearly 20.

Following is a list setting forth some of the objects of cow testing association work:

1. To weigh the milk from each cow.
2. To test the milk from each cow separately.
3. To determine the butter fat production of each cow.
4. To determine the income from each cow.
5. To determine the cost of feed on each cow.
6. To determine the profit or loss on each cow.
7. To balance feed rations and advise on economical feeding.
8. To test separator milk and check on separatory efficiency.
9. To advise on calf feeding.
10. To help on feed buying when it is possible.
11. To substitute facts for guesswork and thereby put dairying on a better paying basis, which will require the elimination of the poor cows and better feeding of the better ones.
12. To help win the war.

The cow tester should be a man of experience and one who knows the dairy business and can advise on various things pertaining to the development of the dairy herd.

No man can afford not to belong to a cow test association who expects to make a success of his business.

PEA STRAW VALUABLE

Has Real Worth in Dairy Ration.

What is the composition of pea vine straw and do you recommend it for feeding dairy cows? I have heard it is dangerous to feed it.

This question was answered by M. O. Maughan of W. S. C.:

Pea vine straw ranks high in feeding value among the various straws. It is superior to cow pea straw, having 53.6 per cent digestible nutrients compared with 44.1 per cent total digestible nutrients for cow pea straw. It has 5.9 per cent digestible protein against 3.4 per cent for cow pea straw. Oat straw has but 1.3 per cent digestible protein. While pea vine straw has total digestible nturients equal to alfalfa hay it contains but one-half as much digestible protein, and therefore is not nearly so valuable as alfalfa hay, but is a very valuable straw and one to be recommended.

Results do not show it to be dangerous. A few cases have been reported of animals becoming sick by being fed this straw, but this was due to feeding a large amount suddenly and before the animals had become accustomed to it.

Farmers' Council Elects.

The Grant County, Wash., Agricultural council, composed of farmers' organizations over the county, has elected officers as follows: J. H. Smith, Ephrata, president; N. Johnson, Quincy, vice president; H. W. Reaugh, secretary.

Uses of Potatoes in Sweden.

Uses made of Swedish potato crop, officially estimated this year at 84,244,820 bushels, will be interesting to people of the United States. Of the entire crop, 37.1 per cent is used for direct human consumption; 32.7 per cent is fed to animals, and 6.5 per cent is used in flour making. The loss in storage is 11.9 per cent and 11.8 per cent is retained for seed.

World's Record Dairy Cows to Date

One of our correspondents wants to know the fat production of the world's champion Guernsey and Holstein cows, and the pounds of milk each produced. Doubtless many of our readers would likewise want to know the world's record fat production of the four principal dairy breeds. The following are the records to date.

Name	Breed	Lbs. Fat.	Lbs. Milk.	Test
Duchess Skylark Ormsby	Holstein	1205.09	27,761.7	4.34
Murne Cowan	Guernsey	1098.18	24,008.0	4.57
Sophie 19th of Hood Farm	Jersey	999.00	17,557.0	5.69
Auchenbrain Brown Kate 4th	Ayrshire	917.60	23,022.0	3.98

Records which show the amount of feed eaten by the cows while on record are not available, but the following statement by W. H. Caldwell, secretary of the American Guernsey Cattle club, with reference to the feeding of Murne Cowan, is very interesting. (Taken from Hoard's Dairyman, Vol. 52, p. 760.)

"She was milked four times a day and fed every four hours. The feed was weighed each time she was fed, and when an increase was made it was done by tenths of a pound. She was in perfect health throughout the year except in October when she was down for a few days with spinal meningitis. She consumed a daily average of 15.3 pounds of grain that cost $28.00 per ton. She was allowed all the alfalfa hay she wanted and in addition received daily 3.5 pounds of beet pulp, 1.3 pounds molasses, 16 pounds of beets and 38.0 pounds of silage. Besides this she was given about 4 pounds of sweet corn and 5 pound of green alfalfa. She was charged 40 cents per day for care and $65.00 for the rent of her box stall for the year, bringing the total cost up to $196.73 to produce 24,008 pounds of milk and 1098 pounds of fat. Her milk sold with that of the herd for 10 cents per quart."

A. B. N.

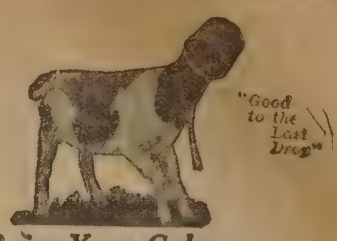
Dairy Labor Shortage

First of All, Get Rid of Unprofitable Cows

By A. B. NYSTROM.

The year 1918 will be a most serious one for the dairymen from the standpoint of labor shortage. A large percentage of our men whom we have depended upon in the past to look after our cows have joined the colors. Others have been attracted by the greater wages paid in the factories, the shipyards and lumbering camps. What will the dairymen do?

There may be several ways out of the difficulty. In the first place let us get rid of the unprofitable cows. There is no question but that in most herds from 10 to 25 per cent of the cows are not making any profit to the owner, and in addition are cutting down the profits made by the better cows. Why not weed out the poor producers thus cutting down the amount of labor necessary, and then give better care to those that remain? When profits are low no one can afford to pay good wages. But if a dairyman is making good money on a few cows he can afford to take care of them himself or pay wages sufficient to keep good help from leaving him.



We should also make it attractive at home for the dairyman's sons. Not long ago the writer was asked by a widow where she could get a steady man to run her 60-acre dairy farm, and what she would have to pay. Her son, 21 years of age, was with her. The writer replied, "Why not let the boy run the farm for the same wages you would have to pay an outsider and give him an interest in it?" She replied that he wants to go to the logging camps because he is not interested in farming. But when it was learned that no hired help could be obtained for less than $50 per month and board, the boy changed his attitude toward the probability of working in the logging camps. Too often we expect the sons to work for board and spending money, when we find it necessary to pay a comparatively high wage to some one to take his place. We can't blame the boy for wanting better wages. It is natural that he should be looking out for the future. If you need him at home, pay him enough to hold him and give him a financial interest and a responsibility, and some of the labor problems will be solved.

Another way to meet the labor shortage is to buy a good milking machine and learn to run it properly. If you are milking 15 cows or more you can well afford to have a machine. If the owner of the cows, or any one who is financially interested, will run the machine according to directions, there is no doubt about its giving satisfaction. To be sure, there are a few machines of all makes that have gotten out of adjustment and do poor work, but where particular care has been given to the mechanical parts of the machine to see that they are working perfectly it has proved a success. The machine is not perfect by any means, but it serves a good purpose in a short-handed dairy, so many of which we will have the coming year.

A Word About Catalogues

"It may sound queer to you," said a friend of mine recently, "but I figure that the postage I use every year in sending for catalogues and booklets is one of the best paying investments I make. I know that I get information from catalogues that I couldn't get any other way, and at practically no expense. When I want to buy anything, from a tractor to a can of paint—anything, in fact, in the way of supplies or equipment for the farm or the house or the barn—I make it a point to send for a number of descriptive catalogues of different makes or brands. I read these carefully. Then when I get ready to buy I know pretty well in my own mind why I prefer a certain make or brand over others. And, as I say, I have found that it pays, because the more you know about the various makes of goods the more intelligently you can buy when you go to the dealer.

"And I make it a point, when I send for a catalogue, to tell the manufacturer in what paper I saw his goods advertised. Sometimes I advertise live stock or my wife advertises poultry in two or three papers at the same time and, of course, we are interested in knowing what papers bring us the most inquiries. So we're always glad to have those who answer our own ads mention the paper they saw our ad in, and we never fail to do this when we answer other people's ads. It's a matter of business courtesy that many people neglect. So, when I write for a catalogue or circular or when I answer an ad for any reason whatever, I always say: 'I notice your ad in (naming the paper) and will be pleased if you will send me your catalogue, etc.'"

Raise Your Calves on

Blatchford's Calf Meal

and Sell the Milk

More calves have been raised on Blatchford's Calf Meal than on all other milk substitutes combined.

100 lbs. makes 100 gallons of milk substitute, costing only one-third as much as milk.

Prevents scouring and insures the early maturity of sleek, handsome calves.

It is steam-cooked and no trouble to prepare or use.

Write for Pamphlet "How to Raise Calves Cheaply and Successfully with Little or No Milk." At dealers, or Blatchford Calf Meal Co., Dept. 58 Waukegan, Ill.

SPOKANE SEED CO.

LIVE STOCK NOTES

Write to the Editor

E. J. IDDINGS, Editorial Contributor.

Good Money in Hogs

By J. E. NESSLY.

I just witnessed a number of incidents at the Northwest Live Stock show at Lewiston, Idaho, that convinced me there is still good money in raising hogs if it is done judiciously, with a minimum price of 15 1-2 cents, live weight, for hogs, fixed by the government (a price never dreamed of until this war) there ought to be a liberal profit in raising hogs.

E. S. Sweet of Grangeville, one of the most successful stock men of the west and an extensive feeder and shipper of hogs, has not given up the hog business because of high priced feed, but is still buying and feeding hogs and making a profit on them. If he can buy and feed at a profit it seems reasonable that any ordinary farmer can raise and feed hogs and make a profit, for he can produce a pig weighing anywhere between 50 and 100 pounds at almost no cost at all if he does not try to keep too many.

Mr. Sweet shipped the prize-winning carload of fat hogs to the live stock show. He had 58 head in the car. In these prize contests but 50 hogs are required for a carload. Mr. Sweet had 50 crossbred Poland China and Berkshire hogs that averaged 294 pounds each, and sold for 20 cents a pound. In order to make the carload uniform he "cut out" eight head of Duroc Jersey hogs, all of one litter and less than one year old. These averaged just the same as the black hogs, 294 pounds each, and sold, in the open market, for 15 1-2 cents, live weight.

Here was one litter, less than one year old, and they brought the magnificent sum of $386.56 for a single litter of pigs. You can not possibly figure that these pigs ate $200 worth of feed even at the high price of grain now. They only brought the market price and they were no better pigs than can be raised by hundreds of farmers throughout the northwest. These pigs were raised by a Grangeville boy whose name Mr. Sweet could not remember, but he is only 16 years old.

Feeding Carrots

To the Editor: In these days of strenuous conservation any item that will reduce the consumption of wheat and other grains should be of vital importance. Therefore, I am pleased to submit to the public an experiment in feeding carrots on a small scale.

For several years we have produced pork enough for our own use without using more grain than two sacks of chopped barley each year, and this is how we do it:

As early as possible in the spring we buy two small pigs. These are put into a small hog lot not more than a quarter acre, well rooted to alfalfa. The milk from two cows is evenly divided between these pigs and our chickens until the cows dry up during the winter. This milk, the slop from the house and the alfalfa are all the pigs feed on until some time in September when the carrots have grown to good size.

From now on until they are six or seven months old they are fed liberally with carrots, perhaps along the last receiving 50 pounds a day. Near Christmas we add a ration of chopped barley reducing somewhat the carrots. We never feed more than two sacks of barley. From the way our pigs look now they should dress about 175 pounds by Christmas at seven months.

I realize that is a little short of the expected average in corn-fed hogs which I believe is 200 pounds, but considering the shortage of grain and the enormous yields of carrots in our section the latter should yield more profit.

Last year our carrots failed us. We had a few loads of well-matured wheat hay and father substituted that for the carrots. We bought lard and substitutes the whole year, even having to put grease in the pan to fry the ham and bacon.

This year we returned to our system of carrots, and expect to have our customary results with that method of feeding. IDA C. YOUNG.

Bend, Ore.

PURE-BRED HOLSTEINS

Are not only the most profitable but also the most vigorous breed on earth.

They are less susceptible to diseases, require less attention, can consume greater quantities of roughage and turn it into milk and butter fat, and are more persistent producers than any other breed. Write for free information about the Profitable Breed.

THE HOLSTEIN-FRIESIAN ASSN. OF AMERICA, Box 205, Brattleboro, Vt.

RATIONS FOR SOWS

Pea Straw or Alfalfa Are Good

By J. R. SHINN.

It may be stated that with middlings at $45 a ton, according to data furnished by the experiment stations, pork may be produced very profitably at present prices. Reliance should not be placed too much upon feeding grain entirely to brood sows.

Inasmuch as alfalfa hay or pea straw may be placed in the ration, the following rations are suggested:

	Young Sows before	Aged Sows before
Alfalfa hay or pea straw	10 parts	20 parts
Ground barley	6 parts	6 parts
Shorts	3 parts	3 parts
Tankage	1 part	1 part
Ground wheat		

Live Stock in Canada.

Canadian live stock figures for 1917 show a decided increase over the previous year, ranging roughly from 4 per cent for hogs to 47 per cent for horses. Milch cows increased about 13 per cent; sheep, 17 per cent; cattle other than milch cows, 25 per cent. The number of all kinds of live stock is also greater than the prewar average as well as greater than in 1914, when the war began. American farmers must consider, however, that Canada's live stock industry is much smaller than that of the United States.

Useless Dogs

Will Begin Campaign to Destroy

By J. E. NESSLY.

A campaign to destroy useless dogs and save the food they eat is one of the latest schemes for food conservation advocated by J. M. (Roe) Martin, a pioneer and wealthy farmer of Colfax. He has started the campaign and is urging that farmers and townspeople take it up. Mr. Martin has been gathering statistics and finds there are more dogs than sheep in several states, Kansas being one with this unfavorable distinction. To the reporter for The Washington Farmer, Mr. Martin said:

"Your paper has a chance to do a world of good by advocating the destruction of worthless dogs. We are being urged to eat less and conserve the food for our soldiers and our allies. Yet we are feeding a horde of dogs that are worse than useless. Nearly every farmer has one or more dogs and many families in town are keeping dogs for which they have absolutely no use. If the food consumed by these dogs were given to pigs or chickens it would mean a vast increase in production of food animals and the food would not be wasted.

"Another important item, and one that probably outweighs the question of food, is the saving of sheep. It is a well-known fact that tens of thousands of sheep are destroyed every year by dogs. Thus we lose the sheep and the wool—food and clothing—that should go to the soldiers and our allies. Hundreds of farmers would keep a few sheep on their farms and they would produce mutton and wool and destroy weeds, but the danger of the sheep being killed by dogs is too great for the farmers to take the risk, and the sheep are not kept where they could be kept profitable and do a world of good on the farms in keeping them clean.

"I am trying to start a campaign to destroy all dogs that are not of real value, not merely as 'companion' or for sentimental reasons are kept where they can do no good, and I am advocating a heavy license of $10 or even $50 for every dog kept. I advocate the law requiring the owners of all dogs to show and prove that they are valuable and, if the neighbors say the dog is not of real value he should be destroyed, regardless of whether the tax is paid or not. If the farmer will take this matter up and the farmers will cooperate, we can have a great decrease in the number of dogs and an increase in wool and mutton production and a big saving in food."

Veterinary

Dr. S. B. Nelson

Wind Puffs—I have a heavy colt, about 1400 pounds, coming 5 years old, which has wind puffs on both hind legs, one larger than the other. The colt has been broken to farm work, but I wish to work him in logging this winter. Will heavy pulling make him lame? Do horses with wind puffs doing ordinary farm work ever go lame? Is there a cure for it?

C. M., Ford, Idaho.

Wind puffs are the indication that there is a slight irritation along the tendon where it passes through the synovial sheath. There is no established remedy to overcome them. There is only one treatment which will in any way relieve the condition, and that is to raise the heels so that the tendons will be shortened and give them a rest. This condition comes from either hard traveling or hard work. You might try an alleviating measure, rubbing into the hair once daily a small quantity of iodine ointment.

Leaking of Milk—I have a cow that got a teat hurt on a wire fence this summer, and while she got well, we had to use a tube when milking, but now she is leaking nearly all the milk in that teat.

R. G., Olalla, Wash.

To stop the leaking of milk from the cow's udder it is necessary to cause an irritation and a swelling of the tissues about the lower opening of the teat. This is most difficult to do. I have found some good results to be obtained from bandaging the lower end of the cow's teat with a piece of adhesive tape about half or three-quarters of an inch wide. Do not bandage too tightly, but just enough to stop the flow of the milk. This may cause the muscular tissues to regain their strength, so as to keep closed after the treatment has been used for some time.

Young Pigs Cough—I have six pigs that are four weeks old. They began to cough when one week old, and the sow pigs have a white discharge after they urinate. They have a dry place to sleep in. G. W. W., Bow, Wash.

I would suggest giving the pigs a few drops of turpentine in their feed. Just five or 10 drops in each feed morning, noon and night. This will stimulate the membranes and possibly overcome the trouble.

Both Should Be Read.

To The Washington Farmer: Enclosed find $1, for which you will please send me The Washington Farmer for three years and The Twice-a-Week Spokesman-Review for one year, as per your "cut price" offer. Both papers should be read by every farmer.

POULTRY

Write to the Editor

JAMES DRYDEN
Editorial Contributor

Canker or Catarrh

To the Editor: Am writing to find out what is the trouble with my turkeys. Between the corner of the eye and the bill is a swelling. Sometimes their eyes are almost swelled shut. Would like to know what to do for them. They do not seem to lose their appetite at all. They make a kind of sneezing noise most of the time. I have tried roup cures, but they don't seem to help. They have roosted out all summer and fall in an open pen on high perches. F. P.
Okanogan, Wash.

The turkeys have either canker or catarrh, judging from the description. If there is a discharge from the nostril or if it seems clogged up, the trouble is catarrh or roup. Try the coal oil treatment. Inject a little oil up the nostril and apply it to the swelling, then, with a feather dipped in the oil, swab out the mouth and throat. Repeat this treatment following day. Painting the swelling with iodine might be advisable. If the coal oil treatment is too commonplace use a 2 per cent solution of permanganate of potash and hold the head of the fowl in it just long enough so as not to strangle it. J. D.

Colds and Catarrh.

To the Editor: Will you please tell me what ails my turkeys? Their heads swell up on the right side and it seems hard for them to breathe. I have two that way. I have penned them up away from the flock and give them one-half teaspoon of sulphur every day. They eat well. W. H. H.
Coulee City, Wash.

This is no doubt a case of colds or catarrh. Discontinue the sulphur. That will make them more susceptible to colds. For treatment apply coal oil to the swelling and inject a little up the nostrils. Also swab out the throat with a feather dipped in the oil. Another remedy is to dip the head of the fowl in a 2 per cent solution of permanganate of potash and hold it just long enough so as not to strangle it. If the turkeys all drink out of the same vessel it would be well to put a little permanganate into it, just as much as will lie on a dime in a gallon of water. This may serve to prevent other turkeys becoming affected in case it may be contagious roup.

The best treatment, however, is prevention. If the turkeys are shut in close, ill-ventilated houses, treatment will do little good. Let them roost in the open air as much as possible, but protect them from cold drafts through small cracks in the walls. One whole side of the house may be open and the other three walls draft-proof. J. D.

The Egg Market.

It looks as though the dollar-a-dozen eggs will not materialize this year. Eggs are, at this writing, in November, selling for a trifle less than in October. Normally eggs are higher in November than in October. In fact, November is usually the high price month for eggs. The reason they are not higher is because there is little or no export business done on account of lack of shipping space. The prophets who predicted dollar eggs did not count upon the effect of food control, nor upon the curtailing of exports to the allies. The prices, however, will be good and poultrymen with a flock of good layers will be able to make a good profit. The average hen of the country, on the other hand, is likely to return a loss.
J. D.

The New Jersey Contest.

The first New Jersey contest, called the Vineland contest, held at the Jersey experiment station, showed an average egg production of 161.83 eggs per hen for the year. This is a little lower average than the Storrs contest, but the winning pens at New Jersey show better records than the Storrs. The highest record was made by a pen of White Leghorns which averaged 221.2 eggs. The Leghorns also won second, third and fourth places. The lowest pen record was 89.7 eggs per hen. It was noticeable that during the winter months the New Jersey contest showed the best egg laying, but during the summer and fall the Storrs contest pulled ahead. J. D.

Honey and Syrups.

Honey and syrups instead of sugar will make victory just as sweet—and bring it much sooner.

Feeds and Feeding

Profit in the Poultry Business

By PAUL E. TRIEM.

In answer to the question, "Is there any profit in the poultry business at the present time?" the unwary information seeker can obtain almost as many different kinds of answers as there are authorities to consult. There are a few men in the northwest, however, who by long experience with chickens, during favorable and unfavorable years, are qualified to express an authoritative opinion. Among these, one of the foremost is D. Tancred of Kent, Wash. Mr. and Mrs. Tancred have been in the business for years and have built up a flock of trapnested White Leghorns famous throughout this part of the country.

"There is no question but that poultrymen must figure closer than they have been doing during more favorable seasons," Mr. Tancred admits, in answer to the above query. "Poultry products are not selling as high as they should, measured either from the standpoint of the cost of production or food value compared with other farm products. I have heard that prime quality pork chops are selling at 48 cents a pound in New York. measured solely on the basis of actual food value, eggs would have to sell at $1.75 per dozen to be on a financial par with pork chops at this price. You can imagine what would happen if eggs were to go to such unheard-of figures, when steak or chops go up and up, the housewife may complain, but she doesn't boycott the butcher. There can be no argument to the proposition that the egg farmer is not getting as much for his product as he should.

"All this aside, however, the fact remains that eggs can be produced at a profit, even in present circumstances, provided the poultryman has the right type of chickens. The day of the hundred-egg hen is over. She must go to join the robber cow and the unthrifty hog. Remember that while a 200-egg hen will eat more feed than a 50-egg hen, she will not eat more in proportion to her added productiveness. The boarder hen must feed her body, just the same as must the high producer. Nor is there any truth in the statement, frequently repeated by those who should know better, that the extra care required by high-producing hens makes them unprofitable to keep. My chickens do not receive better care than any commercial flock should receive, yet among the 1400 pullets we trap-nested last year 19 per cent were 200-egg chickens and 65 of these laid 240 eggs. The average for the entire bunch was 180 eggs. Cleanliness, dry quarters, balanced rations, etc., any flock is entitled to. Beyond this the high producer makes no demands in the line of care, and in return she will shell out eggs at a rate which makes her a good investment. For instance, I have just received a letter from a man down in Oregon who made a gross income on his flock last year of $5.25 per hen, with a feeding cost per hen of $2.75. One of the most profitable flocks in the northwest is located near Spokane. The owner clears $1.75 per hen above all expense, but his are high producers."

Mr. Tancred believes that the present tendency to specialization, which leaves the business of producing young birds to professional breeders and hatchers, while the egg farmer takes the day-old chick or the three-months-old pullet and confines his attention to the egg end of the business, is bound to increase. Trap nesting is the only sure basis for picking out the paying layers. The breeder must trapnest, but for the egg farmer to do so is almost impossible. He has his hands full with the other details of his business. Moreover, if the laying houses are filled to capacity and the workers on the egg ranch are given all they can do through the laying season, hatching time will see the work doubled and the plant swamped. In California the day-old chick is already being superseded by the three-months-old pullet.

In the matter of feeding, Mr. Tancred does not believe that wheat can profitably be reduced below the 20 per cent mark in the poultry bill of fare. Corn is a very poor substitute for wheat in this part of the country, where the winters are apt to be mild, while oats probably come second to wheat in value. Their main drawback is the woody hull, which renders them somewhat unpalatable to the chickens. Sprouted oats and steamed oats are much better in this respect; but in preparing the former the sprouts should not be allowed to grow more than a quarter of an inch in length before feeding. Sprouted oats with three or four inch sprouts are little better than tough grass. On the Tancred farm other green food in the form of roots is raised, as well as oats and rape, seeded in the runs in September, and cut and fed up to freezing time.

As to the poultryman's opportunities in the average year, Mr. Tancred is very optimistic.

"If the poultry fraternity as a whole had practised during favorable years the strict economy they are obliged to practise now, most of them would have doubled their profits," he comments. "With a good sized flock of high-producing chickens, say 1000 or not more than 1200 if one man has to care for them, the average family need worry little about grocery bills and other necessities and even luxuries in moderation, provided the man who looks after the chickens is willing to do his part. He must be on the job pretty constantly, of course, but he would have to do that in any other occupation worth calling by that name. Present conditions are rapidly eliminating the back yard flock, against whose unfair competition we have had to make way as best we could in times past. This competition was unfair for one very good reason: the back yard flock was fed largely from the table scraps, with such feed as was bought forgotten rather than being charged against the cost of producing eggs. The labor was not charged for, nor the up-keep of the plant. The professional poultryman, on the other hand, must keep rigid track of all these items, for egg production is a matter of business rather than of sentiment with him. The back yard flock as an institution was certainly not good for the poultry industry, and I do not believe it was good for the country. In the long run, poultry and eggs must be produced by men who make this a business, and these men must be paid a legitimate profit if they are to live.

"And so, with the present need for strictly economical production of food materials forcing the hit-or-miss flock and the low producing flock out of business, I think the poultry man who stays in the game and plays it right need not fear to face the future. Year in and year out the fact remains that only four per cent of the egg is shell, and that there is no waste to the rest of it, whether you boil it or fry it or however you cook it. The world can't get along without eggs."

Substitute for Coal.

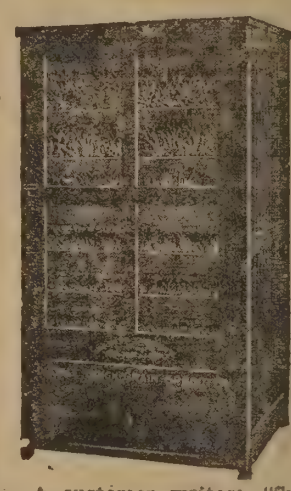
Idaho State Fuel Commissioner Gooding is out with another warning relative to the scarcity of fuel in the state and asking the people of the state to use all care possible in conserving the supply.

Wherever it is possible to get wood it is requested that wood be burned instead of coal. Forest reserve officials have made it possible to draw on the supply of down and dead timber wherever it can be had.

Railroads are to sell old ties and bridge timbers at a nominal cost for fuel purposes.

College Grange Elects.

E. F. Gaines, instructor in farm crops and assistant cerealist in the State college of Washington, has been elected master of the State college grange. Other officers named were as follows: Overseer, Professor R. Barnett; lecturer, Miss Agnes Craig; steward, B. F. Dana; assistant steward, E. D. Alvord; chaplain, Mrs. Leonard Hegnauer; treasurer, Miss Saide Swenson; secretary, C. E. Howell; gatekeeper, J. P. Fairbanks; Ceres, Miss Edna Walker; Pamona, Mrs. George Severance; Flora, Miss Doris Schumaker; lady assistant steward, Mrs. James Emert.



The college grange has been successful in aiding its members in the cooperative buying of fuel, practically every member having secured his winter's supply of coal through the medium of the grange at a material reduction in cost.

160 ACRE FARMS IN WESTERN CANADA FREE

COOPERATION IS ON TRIAL!

Farmers have been first and foremost in efforts to eliminate the middleman.

Granges and farmers' unions everywhere have said, "The middleman must go!" They have debated ways and means for accomplishing this result.

As an experiment and war measure The Washington Farmer asked its readers to help dispense with the middleman in subscription matters. We said to our friends---"Send your subscription order direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, if you believe in eliminating the middleman, help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

THE WASHINGTON FARMER A FINE CHRISTMAS GIFT

Why not send The Washington Farmer to some of your friends and relatives as a Christmas gift? Its visits will remind them every week of your thoughtfulness. They will enjoy its helpful departments and entertaining features. Tell us that your order is meant for a Christmas gift and we will send an attractive holiday card to each person you subscribe for, stating who it is that is sending them the paper and wishing them a merry Christmas and a happy New Year.

The Fruit Packers

In a previous article I treated this subject from the viewpoint of the employer. I now give some observations, gathered by talking with the employe.

First of all the wage worker claims that the wages of farm labor has not kept pace with the advance in wages in other industries. While the factories and mines are paying from $4 to $6 a day farmers are only paying from $3 to $4.

One of the men, Mr. Rodney, with whom I talked was educated, intelligent, had been a member of the legislature of one of the middle states and by reading kept himself informed about industrial and political movements. I suggested to him that the farmers could not pay what the manufacturing industries paid without facing bankruptcy.

"I agree with you," said he, "but neither can we live on what the farmer would be willing to pay us." "I mean," he continued, "that a wage-worker at farm wages can not live and keep a family."

"Mr. Rodney," I said, "will you tell me why you can not live on $3 a day and keep a family, provided that family is of average size, and provided the other members of the family who are able to work, do so?"

"Well," said he, "I suppose a family of three children is not too large. At any rate some of our statisticians have said that considering the number of deaths, and considering that it takes two to start a family, the population would decrease if less than four children on the average were born in the average home. Half the children born die before they marry and reproduce themselves. This leaves the other half to perpetuate the race. But in my home we have three, and with myself and wife, we make a family of five. Now what does it cost us to live? It takes my wife's time to cook the meals, keep the house and care for her children. Not one of the children is a wage earner. Our oldest is a girl 8 years old and in school. The youngest is a baby and needs its mother's care. My wife can not take in washing, sewing, baking, or anything else to supplement our earnings. I must make the money on which we all live. First of all we pay $15 a month rent, and the landlord thinks he is doing us a favor to let us have it at that. We are fairly comfortable, but the house is not modern, and not in a good part of town. The rent, however, costs us 50 cents a day. This leaves us $2.50 a day for all other expenses, provided I worke devery day in the year, Sundays and all. Our grocery bill will average $30 per month, and that does not include meat. For groceries therefore $1 a day. Add that to the rent and half of the wages is gone, provided I worked every day in the year, Sundays Our meat bill is 50 cents a day, and considering the prices we have to pay for meat, we are not at all extravagant." "Now you see," said Mr. Rodney, "that we have just $1 a day left for fuel, clothing, shoes, replacing broken dishes, furniture, carpets, beds, books, paper, street car fare, lodge dues, and a hundred and one things that require a little extra expenditure of money. Do you think that is too much?"

"No," I said, "it is not too much, but how can the farmer afford to pay more than he is now paying?"

"I will answer that question later," said Mr. Rodney, "but before I do that I want to impress upon you that our calculations were based upon the supposition that I was to work every day in the year, Sundays and all. Now, do you think that from an economic, social or physiological viewpoint a man should work every day?"

"No," I said; "I think it is conceded that in a period of months a man will do more work in six days, resting one, than in seven. From a sociological point of view, a man should have some time, say one day every week, to recreate, wash himself up, put on clean clothes, associate with his family or whatever he chooses."

"Admitting that to be true," said Mr. Rodney, "that takes off over 14 per cent of the income on which we based our calculations. Further, we do not always have jobs. Suppose I stay with you until the fruit is all picked, which will be about the first of November, then where do I go? The Lord only knows, but it is reasonably certain that when you pay me off in the evening of the day your work is completed, that I can not get up the next morning with a job yawning to receive me. I must get out and look for work. Perhaps the first man I meet will hire me to work at something to which I am adapted, and at wages as good as I could expect. But the probabilities are that I will spend several days before I find the right work under right conditions."

"Now, Mr. Rodney you must remember that I promised if you staid with me through the season and made good I would give you more." "I know you did, but you have men whose needs are as great as mine, but who are not able to do as much work and the price to them is $3."

"You know we agreed that with the present prices of fruit the orchardists could not afford to pay more?"

"I know we did, but that is the fault of the farmers themselves."

"How are we to blame for that?"

"You farmers as a class are the largest, most powerful single class of voters in this country. You have allowed legislators and lawmakers to be influenced by the manufacturing interests, mining interests and other industries, so that you have not a word to say about the prices of anything you buy or any thing you sell. For instance the Standard Oil company has always paid good prices for labor; but it always fixes the prices of its products and you may rest assured they are high enough to cover the high prices of labor. Henry Ford is regarded as a great philanthropist because he has so greatly improved the labor conditions about his factory. But Henry Ford fixes the prices of automobiles; and while it is conceded that his machine is the best for the price on the market, yet it is also conceded that he is making on every machine a net profit of $200 and that he turns out a machine every three minutes. But you orchardists buy boxes and ask the seller what he will take. You sell apples and ask the buyer what he will give; provided you do not give them to a commission man, to give to a commission man in St. Paul, to give to commission man in New York, to send you back what he professes to believe is due you, "less his commission," less the St. Paul commission man's commission, less the commission at this end, less the freight, etc."

"Well what would you have us do?"

"Why, get together into one big national organization and show the politicians that they are your agents to protect the producers instead of the

(Continued on page twenty.)

Fur Is Prime

To Trap Weasels, Skunk and Mink

By GEORGE LARUE, Twisp, Wash.

The fur is prime now and prices are soaring high. The weasel, skunk, mink and coyote that were catching those ducks, turks and chickens last summer and fall are in condition to pay for part or all the damages now if you will get hold of them and make them do it.

I am going to tell you how I got many of them. The weasel is easy. You can catch him without experience when you know how. I use No. 1 jump trap for the weasel. Tie part of a mouse on the pan of the trap and set the trap under a flume or log or the edge of a rock and fasten the chain to something so the weasel or a larger animal can not drag the trap away and lose it. I have caught skunk in traps set for weasel. The trap doesn't need to be hid for weasel, but should be properly baited with mouse, chicken, bird or squirrel.

Skunk can be most successfully trapped at the entrance of their den, but can often be caught far from their den. The same bait that is good for weasel is good for skunk, but it isn't necessary to bait when trapping at their den. Fasten the trap to the end of a pole from 12 to 20 feet long, so you can pull his skunkship from the den without danger of being hit by one of his volleys of skunk gas.

A skunk will not emit his offensive odor until he is disturbed, and they can be killed and skinned without that awful smell if the trapper understands his busines. A hard stroke with a stick across their back, or get behind the skunk and shoot him in the center of the neck with a 22-caliber rifle. One must paralyze, or severely injure their spine to prevent them scenting things up when being killed. A place should be scraped out and the trap covered with leaves or loose dirt when sets are made for skunk.

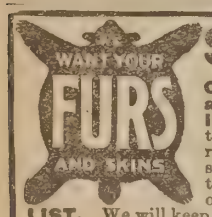
The mink is more wary, and the fellow that can get every one that comes near his set is a skilful trapper. They are usually caught near the edge of streams or lakes. At the entrance of a hole in the bank or under a log or drift near the water is an ideal place and the trap should be baited with fish, bird, mouse, muskrat or chicken. The trap should be hid and things should be made to look as natural as possible.

The coyote is the most plentiful, is the most destructive, and is about as wise a guy as the trapper has to contend with. There are many ways of attracting them and catching one now and then, where they are plentiful, but it requires much experience to become an expert coyote trapper. Near the carcass of a horse or cow that they are feeding on is the easiest place to catch them. After they have been feeding on the carcass for several days the traps should be set in the trails from five to 50 yards from the carcass. A No. 3 or 4 should be used and should be fastened securely, and the traps and chains covered, and all signs brushed out.

In or Out.

Hindenburg still claims Germany was forced into the war. Well, let him have it that way if he will. The real point of interest is that she is now going to be forced out.—Minneapolis Evening Tribune.

FURS IN STRONG DEMAND



Moles, Lynx-Cats, Muskrats, Coyotes, Foxes and Martens bringing good prices. Send for price list and tags.

OSCAR GARD 75 Marion St., Seattle, Wash.

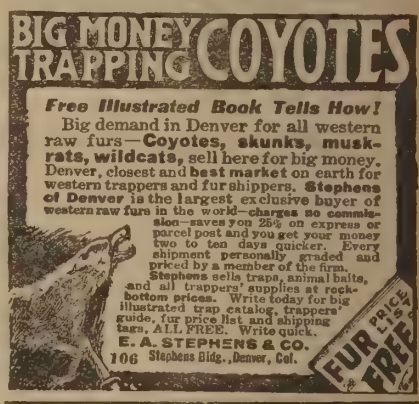
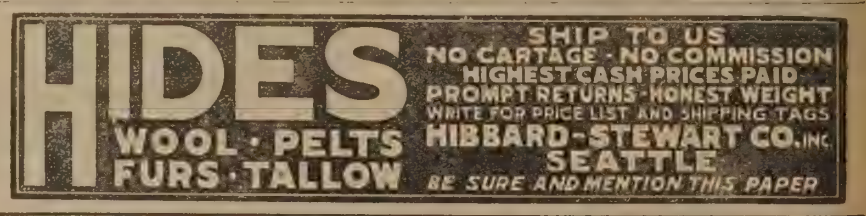
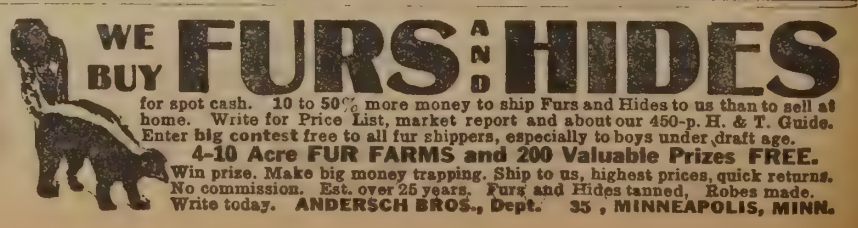
RAW FURS

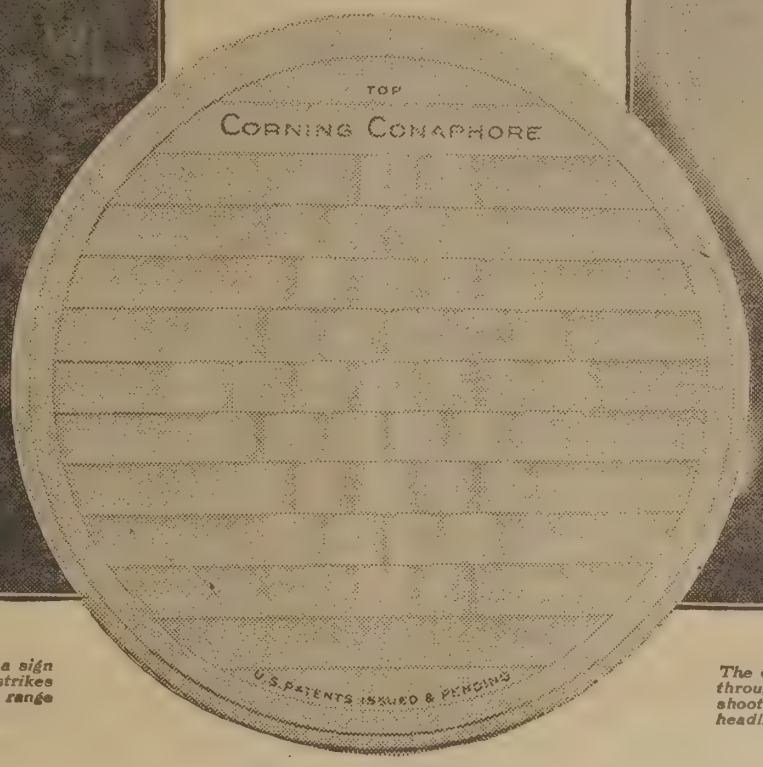


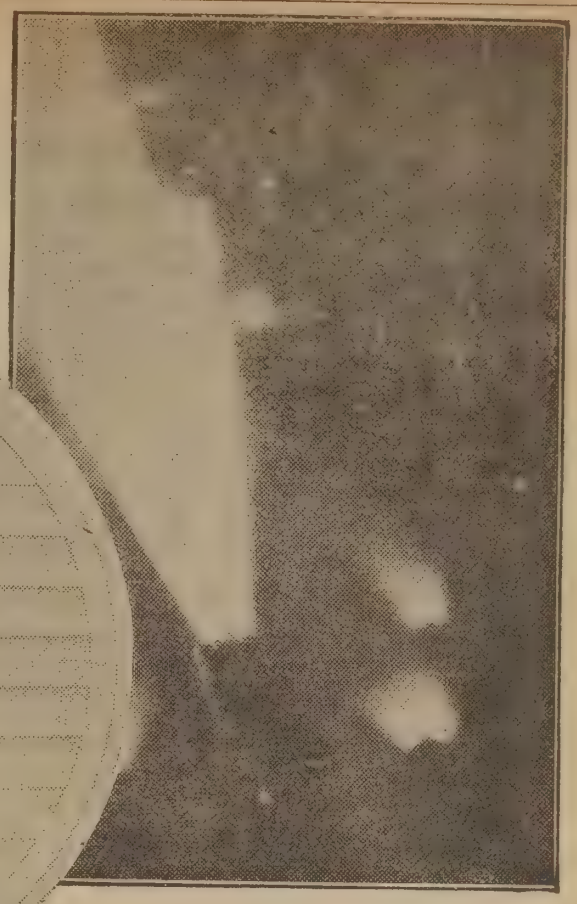
I pay what I quote for the average run of prime furs. I pay **more** than I quote for extra fine skins. Send your name and address on a postal card to

O. L. SLENKER
P. O. Box F-2, East Liberty, Ohio.









No glare—range 500 feet

Driving behind Conaphores you can read a sign 500 feet from the car, if the beam of light strikes it. Note ample side lights. A 500 foot range means safety at any driving speed.

The Conaphore

Smooth front surface. Easily cleaned. Does not clog with dust, mud, or snow.

Shoots right through fog

The car with the Conaphores is speeding along through the fog at 25 miles an hour. The rays shoot right through the mist. Cars with ordinary headlights creep along behind a blinding blur.

To every automobile owner in Washington

Why the Conaphore is your most efficient headlight glass under the new law

WASHINGTON'S new headlight law is strict. It puts the ban on headlights that glare.

This means that every motorist must find a method of eliminating the glare from his headlamps. Yet no motorist can afford to kill glare at the expense of range. For the sake of his own safety he must have plenty of light on the road as far ahead of his car as possible.

Conaphore endorsed by Secretary of State Howell

Conaphores, both Noviol and clear glass, are endorsed by Captain I. M. Howell, Secretary of State. Equip your car with Conaphores and you comply with the spirit and letter of Washington's anti-glare law. In addition you protect your own safety because you get maximum road range under all conditions of driving.

Throws the longest beam, without glare

The Conaphore is the scientific solution of the automobile headlight problem. It gives range of full 500 feet, *yet kills all glare.* Gives ample side-light, too.

The patented horizontal corrugations on the inner surface bend down the light rays and direct them along the road, not more than 42 inches high. At the same time cylinders in the corrugations spread the beam sidewise. By projecting most of the light far ahead of the car, instead of diffusing it or dumping it directly in front and close to the car, the longest possible range is secured.

Thus the Conaphore meets the strictest requirements of law and courtesy.

Pierces fog, dust and snow flurries

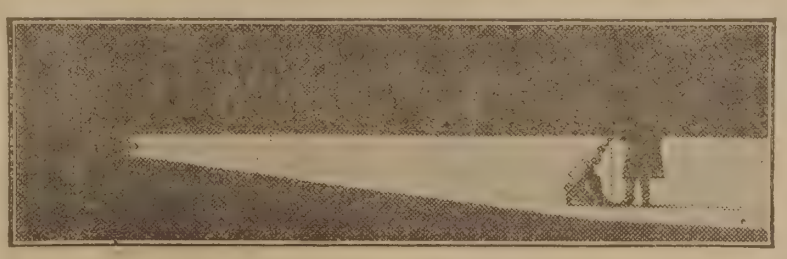
The Conaphore is made of Noviol Glass (*patented*). This yellowish-tint glass causes light to pierce fog, dust and snow flurries, and eliminates dangerous "back-glare." This is because it *absorbs* the blue and violet light rays so easily diffused by fine particles in the air. No other headlight device has this advantage.

The Conaphore is also made in clear glass for those who prefer. Clear glass Conaphores control the beam within legal limits and project the light at long range, but they do not possess the unique advantages of Noviol.

Easy to install

You will find Conaphores easy to install. Simply take out the glass now in your headlight and put the Conaphore in its place. It is wise to see that your headlight bulbs are properly focused at the same time. Sizes made to fit all cars. In ordering give name, model and year of your car and diameter of present headlight glass. All progressive dealers now sell Conaphores. Put a pair on your car today.

Notice to accessory and hardware dealers



If you are not among the dealers handling Conaphores, get in touch with any of these jobbers. They can fix you up in no time:

Auto Supply Co., Tacoma.
Chanslor & Lyons Co., Seattle.
Holley - Mason Hardware Co., Spokane.
Marshall-Wells Hardware Co., Spokane.

RETAIL PRICE LIST (per pair)	Noviol Glass	Clear Glass
5 to 6⅞ inches incl.	$2.40	$1.60
7 to 8¾ inches incl.	3.50	2.50
8⅞ to 10 inches incl.	4.50	3.00
10⅛ to 11½ inches incl.	6.00	4.00

Prices 25 cents more per pair west of Rocky Mountains.

Sizes vary by steps of ⅛ inch above 6¼ inch size.

The above test proves that the height of the Conaphore beams is not more than 42 inches, 75 feet ahead of the car.

Tent Revivals in Cattle Thieving

Life Was Real in the Old Bunchgrass Days in the Big Bend Country

By JOE L. ASHLOCK.

I read the other day that Penny was dead. His passing I marked with sorrow, which brought in its mournful train memories running back over two decades into the eastern Washington bunchgrass, where Penny was prosecuting attorney of the county, and I was a barelegged youngster who knew something about some cattle thieves.

I thought for a long time that Penny thought I was a cattle thief. Maybe he did. Anyway, he said some things about me which I resented in a silent boy's way. Penny made a mistake. Into the deep well of a boy's heart he dropped a stone. The boy remembered the stone during many later years, while Penny, in his righteous quest of horse thieves and other breakers of the law, many of whom he sent to "the pen," was becoming lined with care and gray.

The boy was growing during these years, and as he grew he thought less as a child, spoke less as a child, and put away childish things—and the stone! But Penny was dead then.

Maybe I commenced this story wrong. Perhaps I should have begun by telling about Henry Blank's wife, who weighed several hundred pounds—two or more—and thought the bunchgrass was a good field for missionary work. Before I proceed let me give her credit for a world of good intentions, but, as my grandfather used to say, and as his grandfather said before him, "Hell is paved with good intentions."

She wanted to preach, and preach she did. In the homes of settlers she gathered a few of the sinful folk about her, and told them the constituent parts of human virtue, with emphasis on the parts that failed in their make-up.

She would get away with her discourse in fairly good shape till she became so burdened with the weight of the sins of the world that she would weep, wail and howl—and tears would flow like melting snows from a mountain top!

It was embarrassing. No one in her audience knew just what to say to comfort her. So they all sat silent and troubled while her paroxysms of grief shook her with the power of earthquakes, finally calming down with the comforting strains of the Doxology and a sobbing benediction pronounced upon our sinful heads. She would be fairly calm when the meeting was over, and would beg everybody to come to the next meeting, and, fearing to excite another outburst of grief, almost everybody who failed to escape before she buttonholed them would promise.

We had a few tent revivals in those days. The white tent was called "the tabernacle." Old and young flocked to the tabernacle. Mrs. Henry Blank fairly doted on the tabernacle. She would hardly step outside of it during the two or three or four weeks it was in town.

Henry Blank, however, didn't care very much about the tabernacle. In fact, I think some of his comments about it would hardly be printable. While his wife attended the tabernacle meetings and heroically launched her boat in the breakers to pull sinking human souls upon the solid rocks, Henry ran a bachelor's camp at home, that is, while she sang at the tabernacle "in sweet accord, he ate what the pantry chose to afford."

Like another erring husband who has been immortalized by the poets, Henry smoked and chewed and

"Never would pray with an honest vim,
Nor go to church, nor join in a hymn."

He was unredeemed and beyond redemption, part of the jetsam and flotsam of humanity which his wife saw sinking in waves of sin, and wept at the sorrowful spectacle.

By this time it is gathered, I presume, that Henry's married life was not very happy, nor was he well fed. Mrs. Henry Blank had never heard the axiom, "Reach for a man's stomach and find his heart!" Instead, she reached for Henry's soul and found a plug of chewing tobacco, and an indisposition to mount the bench of repentance in the tabernacle. She wept—indeed, she could weep but not cook; at least, she wouldn't cook when a tabernacle was around.

Well, it came to pass, as sometimes comes to pass in families whose domestic economy has been supplanted by the extreme article in ecclesiasticism, that Mrs. Henry Blank went "east to see her folks." Around the neighborhood it was darkly rumored that she might never come back. It was also said that Henry had sold their only cow to get the money to buy her eastward ticket, and that he was left "strapped," without money, wife, crop and with only a little chewing tobacco.

About that time my hunt for a cow took me past Henry Blank's place. It was a couple of hour's past meal time when I stopped at Henry's to see if he had seen our cow. He hadn't, and he was eating dinner. His dinner consisted of a dipper of cold water and several slices of bread, buttered with white, oily lard in lieu of butter, and on the lard was sprinkled some sugar.

Henry ate this while I sat on his doorstep and sized things up unabashed. He was unshaved; he look worried, and said he had had the headache all day, attributing this fact to the lack of chewing tobacco. He had been so darned busy that he hadn't time to go to town to buy either tobacco or groceries. He had gotten a roll of butter a while before. It had been so darned strong that he had thrown it out and was using lard instead. Had I ever eaten bread and lard and sugar? No, I hadn't. He urged me to try some. I would be surprised, for it was fine. Thus he talked; but in my boy's mind was a lurking suspicion.

Well, while Henry was eating the lard and bread which he liked so well, he could look out at his open door and see many grass-covered hills in the distance, and on these grass-covered hills were grazing many grass-fattened cattle owned by a stockman of that country whom people called Uncle Dan.

Henry fell from grace one day. According to his own confession, he and another fellow went out and laid hands on four of Uncle Dan's grass-fattened calves. From what was later said about this deed it was plain that Henry was thinking about winter's meat when he did this.

However, penitence followed the first meal in which Henry substituted Uncle Dan's juicy veal for the lard on his bread. Being penitent he began to tell all his neighbors what he had done. Had a tabernacle been around I think likely he would have gone to the penitent's bench and loudly proclaimed his sin. "Honest confession is good for the soul!" Anyway, an honest soul usually confesses, and Henry Blank was an honest soul, in spite of his chewing tobacco and dislike of tabernacles.

By and by the things that Henry was saying about himself reached Uncle Dan. He was made of generous clay, was Uncle Dan; but in this instance his indignation was righteous, and he swore. He met with Henry one day and the following conversation ensued:

Dan—Henry, hev you been a-stealin my calves?

Henry—I reckon that's right, Dan; but I'll make it good with the first money I——

Dan—The hell you will! Henry, you're regular out-and-out damfool! If ye hevn't no more sense than to steal calves you ought to hev sense enough to keep your mouth shut about it!

Henry—But, Dan, I——

Dan—Shet up! If ye keep on talkin' about them damned calves ye'll get yourself in jail!

But Henry kept on talking, and finally got himself in jail.

Penny appeared on the scene about this time—and Penny wanted to get the other fellow! Penny said that since Henry wanted to he supposed he would have to go over the road for a little while; but he wanted the other fellow.

I met up with Penny in his quest for evidence that would enable the hands of the law to reach Henry's alleged partner in the transaction. Henry, it appears, had let it out that he had had a partner in the deal. The partner he alleged vociferated to the contrary. No one knew what the exact facts in the case were. Penny wanted to know.

In his quest for evidence Penny got wind of certain rumors that reached to me. He had heard that I knew something. I had been hunting a cow down in that country the day Henry and his partner laid hands on Uncle Dan's calves. In fact, it was alleged that I had ridden up to the wagon, boxed high on all sides, that contained the calves; had looked at the calves, noted that one was red and white, in large spots; another was red with a bald face; another was a roan with horns out less than an inch, and the other was black and white. I had noticed, also, that the calves had Uncle Dan's brand. I had wondered what Uncle Dan meant by selling calves before they were 2-year-olds, and had asked Henry what Uncle Dan was selling calves like that for.

Henry had looked at me rather blackly and told me it was none of my blanked business. Angered at being so rudely addressed, I had "sassed" Henry, telling him presently that he also could go to the torrid place to which, with such black looks, he had but a moment before consigned me. Then, on my buckskin pony, I had departed, with several backward glances, a rising suspicion and the utterance of disrespectful things.

I have never told anybody how much or how little of this neighborhood gossip was true. Penny picked it up, but he picked it up second-hand. He hunted me up ahead of the trial, and his purpose in doing this was to ascertain how much of this I would tell under oath. In a word, he desired to convert rumor into evidence and wanted my help.

Penny and another lawyer hunted me up in the bunchgrass one day, weeks before the trial. He, the great prosecuting attorney of our county, did this thing. He stopped at our home and asked mother where I was. Over in the scabland hunting cows, mother said. Penny may have thought that I was hunting somebody else's cows, but didn't say so. Mother told him the direction in which I had departed, and the same by which I likely would return. So Penny and his friend rode out in my direction on the chance of meeting me, which they did.

Over in the scabland they found me, a bit out of temper, perhaps, because of my fruitless endeavors to cut a stray, bad-tempered bull from our tame milch herd. My cayuse couldn't turn quickly enough to head off the range bull. And then the bull would outrun me back to the herd. Also, he was getting mad and was showing fight. Also he had long horns.

While my troubles were at this crisis Penny and his friend rode up quite comfortably, and viewed my struggles for awhile in a disinterested but amused way.

If Penny or his friend had been full-blooded rangemen one or both would nave tightened up their saddle-cinches and helped me chase the wild bull back to his own wild herd, a half mile away. But they did nothing of the sort. They looked at me, my cows and my enemy in a cool, disinterested way, and when the wild bull whirled on me and pawed the dirt for a charge, compelling me to retreat temporarily, Penny merely said, "Look out!" His "look out"

(Continued on page nineteen.)

You Do Three Helpful Things

Every Time You Buy a War Savings Stamp

The government will sell these thrift stamps at post-offices, banks and other places. Ask your banker, postmaster or mail carrier for further information.

Every time you buy a war savings stamp you do three helpful things:

First, you help yourself by saving that $4.12. You are practicing thrift and forming your character for future benefits in after years.

You are helping to win the war by lending your country money it must have to carry on the war.

And you are helping your country in yet another way. The money you save you do not spend. To that extent you release labor for the government's needs, for no one ever spends anything without making some one else work for him.

If you have not immediately at hand the $4.12 needed to buy your first war savings certificate stamp, you can make a start with 25 cents. For that small sum you can buy a thrift stamp and the government will supply you with a thrift card. When you have attached enough 25 cent thrift stamps to your thrift card you can exchange it for a war savings certificate stamp.

Say you are a farmer boy or a farmer girl, and in some helpful way have earned a few dollars that you do not have to spend on real necessaries of life. Under ordinary circumstances you would be inclined to spend it on some article of wearing apparel that you could do without, or perhaps for a bicycle or motorcycle, or possibly an automobile; or on a trip to the city; or at a circus or the moving picture shows.

Now when we spend money in that way we are requiring some one, or several people to work for us, and that is all well enough in ordinary times when there is plenty of labor and to spare. But these are not ordinary times. They are the most extraordinary times that the world has ever known. We are in a gigantic war for world safety and freedom, and we can not carry on industry and business as usual and win this most unusual war.

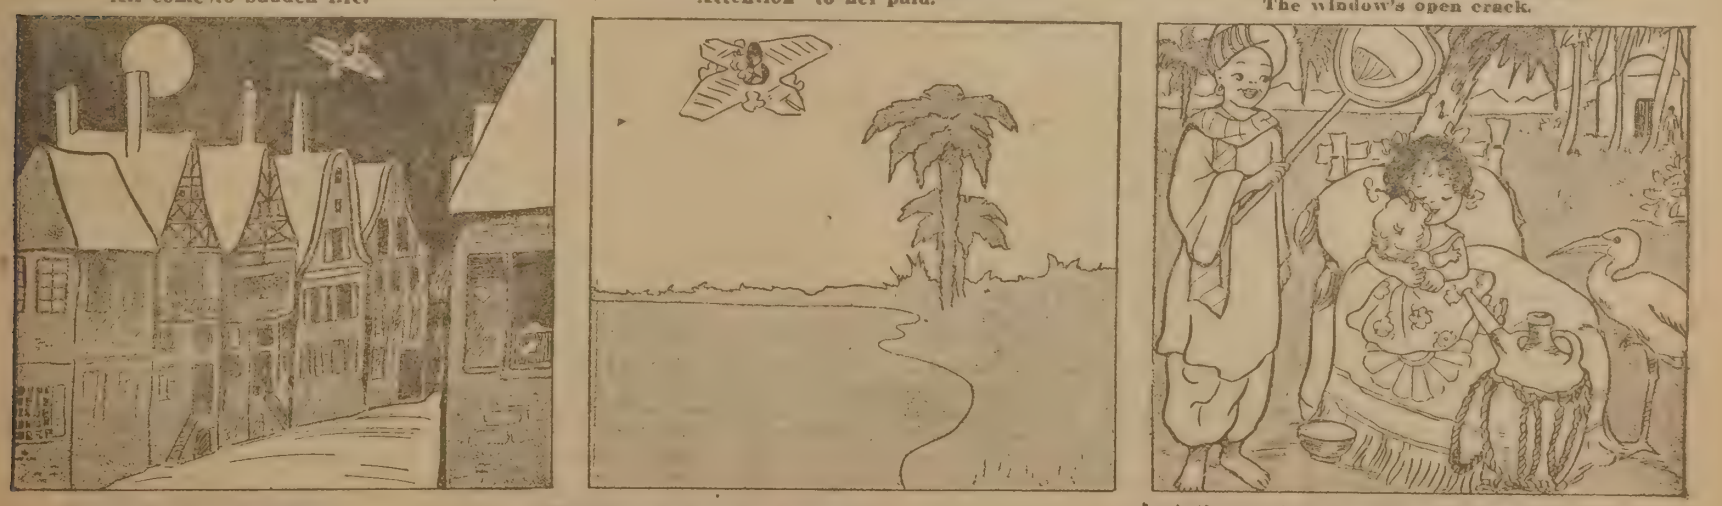
Ordinarily the business men and bankers want to see business go on as usual, but they are coming to understand that business and industry must be readjusted. A big New York banker, of the firm of J. P. Morgan & Co., was explaining the new situation the other day to an audience of other bankers and bond men, and his remarks were so directly to the point and so clear that we are glad to give them space:

"The business of the United States government is war. The business of the United States government until we have succeeded will be war; and if the government is to get the goods and the services that it needs some one must be without those goods and services. And it is the purpose of this war saving campaign to bring that fact home to all the people of the country.

"Now, what has happened in England? When they started this campaign men laughed at the idea that you could take a proposition in economics and make it clear to a whole people. But they did take that proposition in economics and they did make it clear to the people of England. Look what is happening in England today! Talk about a usual business! Why, there are 5,000,000 men in the army out of a population of less than 50,000,000. England is in the same position as we would be in if we had 11,000,000 men in the army, and yet England is producing more than it ever produced before.

"Now the war savings movement means that all over this country that doctrine is going to be preached. It is the doctrine of releasing services for the government; it is the doctrine of releasing man power for the government. And in this war savings campaign if men and women do without goods and services now by lending $4.12 to their government and getting a bond that pays them $5 five years from now, they are obviously deferring the command of goods and services until a future time when with the proceeds of that bond they will again command goods and services. The important thing is that they will at that time be commanding goods and services for which their government is not in such acute competition with them. It is all summed up in that one expression, that no man ever spends anything without making some one else work for him."

MUGGSY BOXES UP A STOLEN DOG



IT'S AN ILL WIND THAT BLOWS NO GOOD

When every one was fast asleep,
The nursery quiet and dark,
The toys would play; the carpet green
Was velvet lawn and park.
Bobby's gay tin regiment
Would march to drum and fife,
Dollies gay, of rag and paste,
All come to sudden life.

Doll Rosabelle was made of wax;
Her eyes were round and blue—
The prettiest, rosiest dolly dear;
She'd many lovers, too.
Jack-in-the-Box popped every night
Unto this beauteous maid.
The wooden sailor, Davy Jones,
"Attention" to her paid.

One night in Dicky's aeroplane
Doll Rosabelle did fly
With Captain Tin, of the regiment,
Unto the ceiling high.
Her other lovers, kneeling,
All begged her to come back.
She laughed, and never noticed
The window's open crack.

Suddenly a gust of wind
Seized the fragile craft.
Out of the open window
'Twas carried by the draught.
Over the sleeping houses,
Under the big round moon,
Dicky's new aeroplane bore far away
Doll Rosabelle in a swoon.

Over the hills and far away,
Till they reached a tropical isle,
Where the mighty brown chief's little daughter lay,
Too ill even to smile.
"She soon will be dead,
Unless we can cheer her,"
The med'cine man said.
"She cries—listen—just hear her."

Just then Doll Rosabelle fell down—
It seemed from the bright blue skies.
She dropped on the bed of the little girl brown.
Who opened her big black eyes.
Don't you think it was a pretty nice wind
Blew Doll Rosabelle that way?
For the sick little girl of that tropical chief
Was cured by her right away.

MARGARET C. HAYS

"Homes of Washington Must Prepare for That Blow and for Subsequent Blows"

To the Editor of The Washington Farmer: I wish to call your attention, and the attention of your readers, to the unusual conditions attending the holding of Housekeepers' Week at the State College at Pullman the week following January 7th.

It is easy to assume that in a nation of the wealth, power and ideals of the United States victory in battles will come. Victory will come, of course. What we shall pay for victory is the question of the hour.

You and I, and every one of us, from the youngest child to the feeble-aged, will pay dearly for victory if there is not on the part of every able-bodied American immediate, enthusiastic, and unqualified response to the nation's appeal for help from the American homes.

Not only is this a war of soldier against soldier, but it is a war of home against home. Dr. Harvey Wiley spoke the truth recently when he said that it was the women at home who are fighting the war. When the American home breaks down and women fail in their duty America's armies are defeated.

There must be, in every American home, not in a few here and there, saving, reservation, utmost skill and forethought, down to the last ounce and stitch of all home supplies. This was the order and the practice in Germany on the first day of Germany's war with the world, and is true in Germany today. Fundamentally, this is why Germany now is able to assemble on the western front the forces to strike what military observers in the world outside of Germany believe may be her hardest blow of the war.

The homes of Washington must prepare for that blow, and for subsequent blows, from the most powerful and the most ruthless enemy that the world has ever seen. Members of the extension service of the State College have recently returned from the nation's capital, where conferences were held with Mr. Hoover, Secretary Houston, Assistant Secretaries Pearson and Vrooman, Secretary Daniels, and others. The hour is full of great consequences; and every neighborhood, town and city should be represented at Housekeepers' week for the sake of the information that can thus be sent back into different parts of the state.

Women's clubs, social groups and business organizations throughout the state should see to it that they are represented at Housekeepers' week by one or more delegates. Every woman in the state who can afford it, even by sacrifice, should come. All this is so, because the desired unity in action, purpose and understanding is mainly a matter of getting the desired information to the Washington homes. Personal attendance, or the sending of delegates, are the most satisfactory means to this end.

We are promised the help of prominent leaders from Washington, D. C., and other centers of war preparation and mobilization for homes and housekeepers.

MARY E. SUTHERLAND,
Emergency State Leader, Home Economics Extension Service.

Red Cross Work

In accordance with the promise of the Farmer to give desired information regarding Red Cross work, especially to those who have signed the pledge of patriotism and become enrolled as members of the Patriotic League of the Farmer, there will be found in this issue complete instruction for Red Cross knitters, together with illustrations of the articles of clothing needed by the soldier boys. From week to week further information will be given as to different ways of aiding the Red Cross work. Just now it is up to every man, woman and child as far as possible to become a Christmas member of the Red Cross organization, by contributing $1 and obtaining from the nearest Red Cross auxiliary a membership card for the window and a membership button.

Harmony and Work Mark Convention

(Continued from page five.)

organization of our business organizations;

"Therefore, be it resolved, That we accept this resolution from them as being a most noble stand for true cooperation, and that we pledge our united support and guarantee that we will help to bring about this condition."

Owing to the shortage of labor, it was the consensus of opinion at the convention that much farm help must be drawn from the schools, and with this in mind a resolution was adopted recommending that each local organization take up with the school authorities the matter of holding school sessions during the winter season, so that vacations may be made longer, thus permitting the boys and girls to lend greater aid in farm work during the rush seasons.

Appreciate College Cooperation.

Of peculiar significance was the unqualified endorsement by the convention of the work of the State College of Washington and the college of agriculture of the University of Idaho in furthering farming interests in the two states. Recognizing the great benefit that these institutions can render, a resolution was adopted asking their coperation in the solution of the problem of bulk handling of grain. This resolution read:

Whereas, there seem to be special reasons why bulk handling of grain should be adopted in the Inland Empire as early as possible, and

Whereas, farmers will need the advantage of all information and counsel possible to obtain,

Therefore, be it resolved, That we call upon the Washington State college, the University of Idaho and the United States department of agriculture to assist us by conducting a campaign of education on the preparation that will be necessary for the adoption of bulk handling.

The coming of Professor W. J. Spillman to the State College of Washington in the spring to be dean of the college of agriculture is highly approved by the union. A resolution touching in part on this subject read: "Resolved, that we commend the policy of the president and board of regents of the State College of Washington in increasing the appropriation of the funds of that institution to be used for agricultural work, and congratulate them upon having secured a man of such wide reputation and proved ability as W. J. Spillman to fill the position of dean of the college of agriculture."

Another resolution endorses the efforts of President Holland of the State College of Washington and President Lindley of the University of Idaho "to inaugurate an era of more friendly relations and closer cooperation in the experimental and teaching work of the two institutions, believing that it will result in great benefit to both and will increase their usefulness to the farmers and tax payers of the two states."

The free use of the mails for soldiers was recommended in a resolution. Another important matter touched upon was that Indian lands be made subject to taxation as soon as certain treaty agreements expire, in order that such lands may be made to help bear the cost of schools, road construction and community development.

"Primary Interior Markets."

The recent announcement of the food administration that the "primary interior markets" at which the 1918 guaranteed price of $2 per bushel for wheat would be applicable would be construed to mean twelve points, the most westerly of which is Minneapolis, aroused the delegates to the convention to a fighting mood. It was argued that this did not guarantee to the farmer of Washington and Idaho and Oregon $2 for his wheat, but only $2 less a stiff freight charge to some point far outside the northwest.

Talk was heard to the effect that the matter would be taken into the federal courts if the discrimination was not righted, as it is the firm conviction of the farmers that congress did not mean Buffalo, Chicago, Detroit, Duluth, Indianapolis, Kansas City, Milwaukee, Minneapolis, Omaha, Peoria, St. Louis and Toledo when it said "primary interior markets" in the price fixing bill. A vigorous effort will be made by the organization, backed by other organizations in the northwest, to secure more equitable ruling on the matter. Another article in this issue touches more in detail upon the question involved in this proposition.

In Memory of C. B. Kegley.

The convention, in recognition of his long record of service as master of the state grange of Washington, adopted a resolution eulogizing the late C. B. Kegley, who died several weeks ago after a short illness.

Big Problems Faced by the Farmers

Handling Grain in Bulk—This question is larger than ever because of the sack shortage condition brought about by the war. The problem seems now to be not "Shall grain be handled in bulk?" but "How best can the farmers and warehousemen prepare quickly to handle it in bulk?"

Farmers' Union Warehouses—Should the conduct of warehouses under the management of the farmers be placed under a central organization, or should each warehouse or store remain much of a local enterprise as it is under present conditions?

Labor on the Farm—The farmers are as patriotic as any class of people on earth, but is it wise for the ranks of experienced farm labor to be depleted by recruiting or drafting into the army or navy service? Would it be advisable for the government to draft men and place them on the farms under military authority and regulation instead of placing them on the battle field?

The Grading of Grain—Must the wheat grower put up with the present system of grain grading whereby he can not have a grade and a price put on his wheat until it reaches tidewater or Chicago? Must he be content to wait indefinitely before selling his grain, the length of wait depending upon shipping conditions, warehouse conditions at the terminals, or other conditions that he knows nothing about?

The Dockage of Grain—What protection has the farmer against erroneous or unscrupulous dockage of his grain when it reaches the terminals 500 miles from the place it was grown? What recourse has he for having to pay freight on the screenings in his wheat? What recourse has he for the loss of good stock feed resulting from the cleaning of his wheat at the terminals?

Next Year's Price Guarantee—If Minneapolis is the most westerly "primary market," under the ruling of the food administration, at which the two-dollar price guarantee for next year's wheat is applicable, what does the price guarantee amount to to the wheat growers of Washington, Oregon, Idaho and Montana? Did the government mean $2 or $1.50 or $1.75 a bushel for northwestern wheat when it announced that guarantee? Shouldn't the price fixing commission have a northwestern representative on it? Shouldn't the farmers of the northwest raise a vigorous protest and leave no stone unturned to secure equitable prices for their product? Should they be content to accept a penalty of 25 or 30 cents a bushel for living in the northwest?

Advantages of the War—Do not the conditions of the present time place before the farmers an unusual incentive for strong organization? Are there not certain advantages which the war situation has developed that should be followed up after the war is over? Should the farmers not be organized as never before to insure themselves against a relapse to conditions as unsatisfactory as, or more unsatisfactory than, "ante-bellum" conditions?

National Patriotism—This is not a problem. The farmers are patriotic. They are giving their best efforts to their nation. They are watching their sons lay down the farm tools and take up the rifle. They are making plans for ever-increasing production of food crops. They are conserving foods and feeds as never before. Patriotism itself is not a problem. The only problem is how best to carry out the patriotic aims of the producers.

Time—Money

Every day of delay in beginning a business education is a loss of money.

November is at hand. Begin now.

Stenography, Typewriting, Bookkeeping, Penmanship, Banking—these are all money earners.

Begin your winter's work.

U. S. Mission Back

Report the Morale in Europe Good

Colonel E. M. House, head of the commission recently sent to Europe to coordinate the work of this country with her allies through the allied conference in Paris, has arrived in this country together with the other members of the commission. He reports the work which they went to do "successfully and satisfactorily done." The exact nature of the work was not discussed. An official report has been made to President Wilson, but not yet made public.

Italy Stands Firm.

With a stupendous army of Germans and Austrians massed on the Italian front, a great battle, one of the most vital of the entire war, is still being waged in that section. The Italian armies are holding their ground satisfactorily at this writing, though the developments of the next few days are doubtful. Weather conditions, food conditions and ammunition conditions may suddenly turn the tide in favor of one or the other.

The same general condition is true along the front between the French and English and German armies. Owing to the cessation of actual warfare between Russia and Germany under the armistice recently agreed upon, large reenforcements have been brought from the eastern front to the western front, greatly menacing the allied forces. It is generally believed that the next few weeks or months will witness an unprecedented effort on the part of the German and Austrian armies to win decided victories over the allies before American power can be made to be felt in the spring.

Rumor has it that the kaiser is planning to make another peace offer during the Christmas season, but at this time there is no hint what new terms will be offered, if any, but the allied governments are in no mood to consider peace under any terms expected of Germany.

Peace negotiations are actually being entered into between the rebel element of Russia and Germany, and it is understood that Germany is securing food and munition supplies from Russia for the first time since the beginning of the war. This latter is perhaps as serious a blow to the allies as the withdrawing of soldiers from the Russian front for service on the French front.

Recruiting Is Heavy.

As a result of the announcement by the war department that up to noon December 15 men subject to the draft law could enlist in their chosen branches of the service, but that thereafter no such enlistment would be allowed, thousands of enlistments were recorded last week. The recruiting offices were overrun and could not handle the rush of work and examinations. Since the declaration of war last April more than a third of a million men have enlisted for the regular army alone, more than bringing it to full war strength.

Jerusalem Has Fallen.

The British army in Palestine has captured Jerusalem, the holy city of Bible times. For 1200 years this city has been under control of the Turks, and the Mohammedan religion has been the religion of the people. Oppression of the Jews still there has been notable, and great rejoicing among the Jewish people the world over has resulted from the capture of the city by the British. As a military victory it is not specially significant, however, though the city held out long against the seige.

Interior Markets

New Ruling Juggles With the Law

Shortly after the passage of the food control law last July the Farmer drew attention to the somewhat elastic nature of the phrase "principal interior primary markets of the United States," and advised agricultural organizations to take steps to secure a just and reasonable construction.

Unless that were done, we then said, the wheat growers would be disappointed in the purported guarantee of $2 a bushel for the 1918 crop. For example, if no primary market were named by the government for the Pacific northwest the wheat growers of this region would have the freight rate on a long haul deducted from the guaranteed price.

Our fears seem to have been well founded. A ruling by the United States food administration deprives the whole country west of the Missouri river of a primary market. It says:

"The term 'primary interior point,' as used in the grain trade and more recently by published statements of the United States food administration, includes 12 important markets. Alphabetically, they are:

"Buffalo, Chicago, Detroit, Duluth, Indianapolis, Kansas City, Milwaukee, Minneapolis, Omaha, Peoria, St. Louis and Toledo.

"Primary shall not be construed to mean the frist or the home market. It refers rather to the interior growing points of chief importance as listed."

This order or ruling clearly tries to juggle into the law a construction not warranted by the plain language of the statute. Primary means first and nothing else, and it is palpably unreasonable for the food administration to declare that "primary shall not be construed to mean the first or home market," but that "it refers rather to the interior growing points of chief importance as listed."

Primary, as any dictionary will tell one, means first or primary, not secondary. It is reasonable to hold that it means such grain-buying points as Moscow, Lewiston and Boise, in Idaho: Pendleton, Salem, Albany and McMinnville in Oregon, and Waterville, Davenport, Ritzville, Colfax and Walla Walla, in Washington.

Forecasts Famine

Food Situation in Europe Grave

The news service of the farm extension department of the State College of Washington credits R. B. Coglon, state leader for county agents, with the statement that famine in Europe is inevitable. Leader Coglon has just returned from a meeting of county agent leaders at Salt Lake City, where food conditions were discussed and plans for increased agent work throughout the nation planned.

"We are told that we must accomplish all in our power to relieve the situation," the News Service quotes Leader Coglon. "The purpose of the meeting was to discuss ways in which the county agent system could be made to serve in increasing food production and conserving the present supply.

"The United States department of agriculture urges that a county agricultural agent be put in every agricultural county in the United States. It is recognized that this is not a question of general agricultural work, but an emergency condition that has existed before and has now become acute.

"Before the first of February, 1918, county commissioners will be asked to make appropriations for county agent work as a war measure."

Mr. Coglon said that the federal government will continue to fix the minimum prices for farm produce so that producers may feel safe in increasing acreage of such easily shipped foods as beans, peas and wheat. Increased production of pork was urged, as this meat is so easily shipped across the Atlantic.

Value of Stone.

The value of stone produced in the United States in 1916 was $79,041,699, as reported to G. F. Loughlin of the United States geological survey department of the interior, an increase of nearly 6 per cent over the value for 1915.

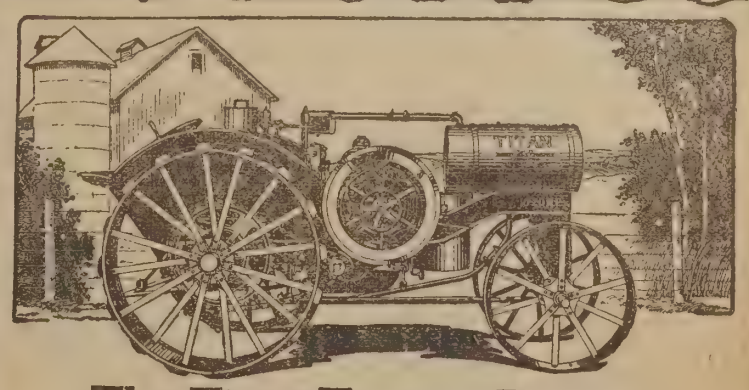
Crammed Full of Extra Value!

That's Hanes Winter Weight Underwear. Look at the big features in the illustration, then balance up with this:

Hanes is made form fitting—pre-shrinking keeps it true to size and shape—its natural elasticity makes it "give" with every movement—there's no itching, ripping or flaring, just warm and comfortable.

The answer is the finest underwear value in the world and at such popular prices.

Test it yourself. Ask a Hanes dealer for this underwear and see if it isn't the biggest value you ever saw. If you don't know a dealer, write us.



Here's the Best Bet For Your Youngsters

A new union suit for boys—too strong and elastic to knock out at the knees and warm and cozy enough for the coldest days. Washing can't faze it. Its value can't be duplicated. Look these two big values over at your dealer's. Ask him for

The Titan Tractor Record

A TITAN tractor is a safe machine to buy. The present models have been at work steadily on average American farms for more than two years. Their standing is established.

Ninety-six per cent of **Titan** owners say they are perfectly satisfied with the amount and quality of work the machines do, and with their fuel economy.

Every **Titan** tractor operates successfully on kerosene. You can always get a plentiful supply of kerosene or distillate, at a reasonable price.

There are two sizes—10-20 and 15-30 H. P. The 10-20 size is the one recommended for average farms. It is a three-plow outfit with two plowing speeds, 1.85 and 2.50 miles per hour, turning from 7 to 10 acres a day. You can use it for all kinds of belt work up to 20-H. P. and for hauling.

Both sizes give the same steady, reliable service. Both operate successfully on kerosene. They reduce labor costs. By getting the work done in the right way and at the right time, they increase yields.

A **Titan** tractor is a safe, profitable machine to buy.

To have a **Titan** tractor delivered in time for the harvest and the fall plowing, your order should be placed soon. Write us for catalogues.

Tent Revivals in Cattle Thieving

(Continued from page fourteen.)

would have helped me a lot if the wild bull had gotten his horns into the flanks of my pony. I felt like telling Penny and his friend to drift off to the place to which Henry had consigned me some months before.

By and by, angered clear through, I raced Rover at top speed right up onto the bull's hind quarters, and the collision nearly knocked the bull over, brought Rover to his knees and made me pull out a double handful of his mane to keep from being pitched overboard.

Now, Rover, a nimble-footed bronco, had a grouch of his own at this bull. He was on his feet as quick as a cat, for he could move just that way, and in the instant that the bull scrambled, bellowing, to his feet Rover whirled and planted his two black, shining hind hoofs into the bull's side. That fixed the bull. When he staggered to his feet at last he stumbled in a circle with a chuckling, sputtering rumble and his spine was bent like a bow. Rover had knocked him double and he couldn't straighten out again, and he was willing to go back to his own herd, which he did with his nose nearly dragging on the ground.

I can see now that Penny's apparent lack of interest while this struggle was going on may have been misunderstood by me. I see now, but did not see then, that he, clumsy on a horse and mounted on a clumsy, untrained horse, had utterly no business taking part in this struggle; that he did technically the right thing by keeping out of the way.

Right or wrong, I believed that Penny and his friend were not interested in my boy's problem, so, as it turned out, I refused to get interested in the problem of the prosecuting attorney.

If Penny had told me frankly that he was seeking evidence to determine whether or not so and so was guilty of cattle stealing and should be sent to "the pen"; that he wished me to tell him what I knew in response to certain questions he might ask, I think he and I would have gotten on all right, even though he had failed to help me chase the wild bull away.

But Penny was not so frank. Without telling me who he was or what he wanted he began to talk to me in a cautious circles. He tried to be sly, adroit, confusing. He was merely a lawyer, cross-examining in advance of the trial. Presently he got me a bit confused, and I had to correct myself on a minor point.

I could see that this gratified Penny greatly. He smiled in a self-admiring way. Regardless of the fact that I was watching him, he winked a sly wink at his companion, who also winked.

Right there Penny dropped his stone, and lost the friendship and confidence of a boy. Maybe he wouldn't have cared had he known, for what could one boy more or less mean to a prosecuting attorney?

A little later I was subpenaed as a witness. Then, and not till then, I found what it was all about. Penny out in the nunchgrass had tried to slip up on me. He had tried to play foxy at my expense—had made fun of me! Even then I didn't know what Penny wanted to know; but I judged that I must know something that he wanted to know about, and mentally I resolved I would not tell him anything for love, money, chalk or marbles.

I rode Rover 50 miles to the county seat in one day to attend the trial. There they kept me hanging about the courthouse for several days. There were several cattle rustlers up for judgment. Penny surely had his hands full.

My turn to take the witness stand came at last. The courtroom was crowded and still as a mouse. The jurors were crowded in a small, fenced-in enclosure near the lawyers' tables, and the high seat from which the judge overlooked the court.

Penny was smiling and affable. He greeted me like an old friend whom he had known a long time. I was surprised, and, for a moment, deceived.

He turned to whisper something to the man sitting next him. This let me have a side view of his face, and I could see under his heavy, drooping mustache. I caught there the thing I was looking for, and it was the shadow of a ly, secretive, insincere, contemptuous smilt! And it was for me I thought. Perhaps I was mistaken, for I know now that I misjudged Penny and that he misjudged me. But that was the way I felt then, and it didn't help Penny's case a bit.

Penny faced me again with the frank, friendly smile, and I could not see the lurking shadow of the real thing that was down in his mustache, but I had seen it and knew it was there.

Looking back now I can see that Penny didn't question me very skilfully. I saw presently what he wanted to know. But his questions were not coming right. To tell him what he wanted to know I would have had to volunteer information, and this I wouldn't do—not for love, money, chalk or marbles. Penny didn't get from me the things he wanted, and a while later the jury brought in a unanimous verdict of "innocent" for Henry's alleged partner in the deal.

Later still, Henry Blank, who had been down in the basement in jail while all this was going on, took the train for Walla Walla, where, unaccompanied by any guard, he presented his "credentials" to the warden, and asked to be taken in for a year. This was done, but he got out in 10 months for his good behavior.

Everybody in our neighborhood said that Mrs. Henry Blank would now seek a divorce; surely she would not be tied to so sinful a man. They wronged her grossly. She wrote to friends that she had never realized how much she loved Henry till she had learned that he was in the pen, and I heard also that she sent him a few dollars with which to buy chewing and smoking.

Years passed, which is a habit with these units of time. Mr. and Mrs. Henry Blank disappeared from the neighborhood and the thoughts of their neighbors—but Penny lived on, and never ceased his fight to bring the erring to justice. He became grizzled, bluff, stormy, was hated by evildoers, and by the law-abiding credited for being a just man. I know now that he was. Then I still remembered the stone.

After over 20 years a county division fight arose. Penny, a public-spirited man, was interested. He came to the state capitol to see the governor and certain legislative committeemen.

When he drifted into the governor's office I was in the secretary's outer part of the office, on duty as governor's secretary during the session of the legislature. The instant that Penny opened the door I knew him, but he did not know me.

While waiting to see the governor he talked to me, with no thought of that bull fight or the cattle stealing scrape of over 20 years ago in his mind. He wanted some information which I could have given. Once I opened my mouth to give him this information and closed it again, and looked under his mustache.

It was a good while before I caught the thing I was seeking. Age had made his mustache gray and bushy, and it was a better concealment. Also, that shadowy smile which said what was in Penny's mind while the smile on the front part of his face addressed you, had, in many years, learned the trick of hiding.

I caught it finally—the same sly, secretive, cold, lurking smile. Maybe, after all, it was not the sinister thing I thought it to be; I know now that I misjudged Penny and that he misjudged me; but just the same, precisely as I had done on his witness stand years before, I kept my mouth shut like a clam.

All Greatly Pleased.

To The Washington Farmer: I want to say that we all are greatly pleased with The Washington Farmer.

Chicago International

This Year Breaks Record of Previous Shows

By D. E. Richards.

This year's Chicago international live stock show has proved to be a wonderful success in spite of the present unsettled conditions. All records established by previous shows were broken this year. The attendance record this year proved that more people are annually attracted to this great show; on more than one day there were 45,000 persons present. Merry Monarch, the grand champion steer, fitted by Purdue university of Indiana sold for $2.10 a pound. The Angus yearlings, which won the grand championship in the car lot division, sold for $42.50 and averaged 1090 pounds, this being nearly twice the former record price. A record price was also established in the 70 loads of cattle sold in the auction sale ring of fat cattle, the price being $17.44, compared to $15.23, the price paid for last year's cattle. The cattle averaged 1207 pounds. The champion Hereford bull, Ardmore, owned by W. L. Yost of Kansas City and selling for $31,000 to W. R. Pickering of the same city, marked a climax in the Hereford sale rings.

This year's international was well managed from start to finish, each day carrying out its special programs, furnishing educational entertainments from the time the judging started in the morning until the close of each evening night horse show.

Saturday, December 1, was devoted to the college judging teams. Twelve schools were represented in this event, Nebraska university winning the contest and the remaining schools in the following order: Kansas Agricultural college, Texas Agricultural college, University of Minnesota, Iowa state college, University of Missouri, Purdue university, Pennsylvania state college, Ohio state university, Ontario Agricultural college, North Dakota Agricultural college and South Dakota Agricultural college. This is the first time in the 17 years that the Nebraska team has won high honor in this event. The winning of first place in this contest is considered the highest honor that a student or college can win. The very best students are selected from these colleges and given the coaching of the best judges the college can obtain, and the training these students receive is valuable to their career as live stock men. Including the 1917 contest there has been some 700 college students enter these annual contests. Up to 1916 40 per cent of these men have become college professors in the United States, 41 per cent farmers and breeders, 7¼ per cent secretaries of breeders' associations and live stock commission men, 8 per cent are engaged in lines of work other than agricultural.

Sunday, December 2, crowds of people visited the stock barn, inspecting the sheep, hogs, cattle and horses as well as the car lots of cattle, hogs and sheep that were in the yards. The car lots of cattle exhibited represented long feeding periods and showed cattle fitted to a finish and a credit to a world's greatest display.

In the sheep division the animals did not show the same finish as did the cattle, as evidenced by the fact that 30 of the 70 loads entered were culled out.

The car lots of hogs showed the same high finish as did the cattle division, as well as showing great uniformity as to size and breed type. The alleys in the hog houses were crowded with farmers and stockmen at all times.

On Monday, December 3, the judging started. Crowds of people took seats and after these were filled the people kept coming, crowding around the ringside when the stock of their fancy were being judged. This same program continued throughout the week.

When the purebred and grade steers were judged the breed enthusiasts showed the keenest of interest. When a steer of one breed would be put over a steer of another breed great applause would come from the "backers" of that particular breed. As the judging progressed the policemen were scarcely able to keep the crowds back far enough to make room for the judges. When the Shorthorn steer was finally made grand champion the Shorthorn men really went wild, and were uncontrolable until they had "let off" the outbursts of enthusiasm. The same intense interest was shown each day as the judging progressed and the first prize animals were selected from the large list of excellent animals entered in every class.

An unusual amount of interest was shown in the draft horse classes. All the seats around the horse ring would be filled long before the judging started and remain filled during the entire day. The classes for the purebred draft horses were overcrowded with the cream of the horses that the world has produced. The horses were in the height of show condition and decorated to please the severest critic.

In the hog and sheep division the same keen interest was shown. The ringside was always crowded with interested spectators watching the judge select the winners. The hog division had a good showing of each breed, including a wild hog from Mexico, and besides all the more popular breeds of lard hogs, it had a good collection of Yorkshires and Tamworths. The classes in the sheep division were equally well filled having the keenest of competition in each breed. An especially interesting exhibit to the western visitors was that of the Dorset ewes and their two-weeks-old lambs.

Next to the six-horse teams, the five-gaited saddle horses attracted the most attention. These horses were judged for their ability to perform the different gaits, their conformation, finish, style, beauty and manners. The horses represented the winners of the many state fairs and the prizes were hotly contested for. The exhibition of the six-horse teams held every one in the audience until the last event. The animals were all especially well matched and were under control of the driver at all times, when they were cutting figure "eights" and any number of fancy twists.

Besides the best of exhibitions of with their stock at the various state fairs, but to win at the international is the highest ambition of every stock-live stock the colleges and the United States department of agriculture had a very instructive exhibit of experimental data on feeding live stock. These experiments covered all classes of stock and gave valuable information on the cost of production as well as the results of research work on the demand.

The Chicago International Live Stock exposition is recognized as the greatest show of its kind in the world. It is a battle of the champions of the land, made up from the first prize winners and champions of the state fairs all over the United States.

Stockmen strive hard to win honors man; and he would trade all the ribbons won at every state fair for one "blue" at the international.

This year's show was patriotic in every regard, taking on the form of the "meat producing school" of the nation. It was a splendid success in every regard. From the time the students' judging contest opened the show until the last six-horse team was driven out of the ring last night there was not one dull moment.

Among those attending the exposition from the Pacific northwest were: W. R. Ledbetter, Willis Moss, R. M. McAlister, Floyd McKinnon, of La Grande, Ore.; Frank Brown & Son, Carlton, Ore.; A. D. Dunn, Wapato, Wash.; Frank Rothrock, Spokane, Wash.; A. B. Cook, Helena, Mont.; C. N. Arnett, Bozeman, Mont.; E. A. Lawson, Portland, Ore.

Frank Brown judged the Cotswold sheep, both breeding and fat classes. A. D. Dunn made an address at the Shorthorn banquet. The men from LaGrande all located some purebred horses that they expect to purchase in the near future.

Five Pig Club Boys

Money They Made and How They Made It

By Karl Allen.

Five central Washington boys whose success in hog raising is being cited in the Inland Empire drive for more boys' pig clubs conducted cooperatively by the Spokane chamber of commerce, the United States department of agriculture and the state college are Albert Mayer of Moxee City, J. Addison Shoudy of Ellensburg, Glen Chandler of North Yakima and Orval C. Coffin and Thomas Carvo, both of Toppenish.

The Mayer boy, according to information he recently gave State Pig Club Leader B. E. Smead, began business with a purebred Duroc Jersey sow. The sow was 9 months old and weighed 135 pounds at the beginning, and by young Mayer was valued at $35. His total expense, including feed, pedigree, fencing and labor, amounted to $89.88. At the close of his account with his club sow he valued her at $80, which with the value of pigs sold and unsold, and a prize, raised his total receipts to $178.50, giving a profit of $88.62.

Young Chandler tells Mr. Smead that he is planning to fit a show herd next year to exhibit at the Spokane Interstate fair, and the state fair at North Yakima.

Orval C. Coffin went into business as a pig club member with a registered Poland China sow for which he paid $60, loaned him by a bank on the strength of the pig club. The boy made his sow a warm, snug, triangular shaped house for $2.65. Until his sow farrowed four male and five female pigs he kept her on pasture supplemented with about 15 pounds of milk mixed with shorts, daily. He fed the sow tankage before and after weaning—following printed directions given him in state college circulars—weaned the pigs at six weeks and castrated them a week before weaning.

The Shoudy boy joined a pig club last June, bought a purebred Berkshire boar for $9, built a pen and self-feeder out of scrap lumber, and in 84 days, fed his pig 417 pounds of grain and 200 gallons of milk, with which, plus some pasture he produced a gain of 135 pounds. He now values his boar at $35, claiming a gain over all expenses, and the purchase price of the animal, of $10.71.

Glen Chandler's pig club operations, according to the information he gave to Club Organizer Smead, have included the rearing and selling of two litters of Duroc Jersey pigs. The first litter he fed on corn, barley, shorts, bran, apples, and milk, at a cost of $105.55. His expenses were the feed cost just mentioned plus the care of the hog and breeding sevices, totalling $124.55, which, subtracted from total receipts of $285.52, left a net profit of $160.97.

The second litter of pigs were reared on a little over 6000 pounds of corn, barley, shorts, bran, apples and milk at a cost of $30.69. He evidently used large quantities of apples and milk to cut down his feed costs. He gives his total expense at $51.57; value of hogs sold and on hand, $145; net profit, $93.43.

The Coffin boy's expense, including the price of his sow, feed, pasture and labor, was $135.83. His returns, including the original value of his sow, pigs sold and kept, were $309, putting him ahead $163.17.

Thomas Carvo of Toppenish began business as a pig club member with a purebred Poland China sow valued at $40. The bulk of his feed included table waste, shorts, bran, grain, some pasture and milk. His costs for the sow and young pigs were $67.71, and his total receipts $231, leaving a profit of $163.29.

This boy informed Mr. Smead that he entered the sow and litter contest because he thought that by so doing he could make "lots of money."

Favor Orientals

Dairymen Would Import Laborers

The Washington State Dairymen's asscciation, in annual convention at Sequim last week, voted in favor of the importation of oriental labor to relieve the shortage of farm workers in this country unless some other means of maintaining the farms can be devised by the government. The resolution adopted provided that congress should be petitioned to import such laborers, with the provision that they should be returned to their countries as soon as the labor crisis was passed. The resolution caused a heated debate and was not passed unanimously.

The meeting was an interesting one. Matters of legislation, condensery problems and organization problems were discussed. William Bishop of Chimacum, widely known breeder of Holsteins, was elected president for the ensuing year.

Owing to lack of space a full report of the convention is not given in this issue, but will be contained in the issue of next week.

The Fruit Packers

(Continued from page twelve.)

speculators and gamblers." "If the producers are protected in fair profits, then they can pay fair wages and then the conditions of wage workers on the farms will be improved."

"Then you can improve the conditions under which farm laborers work; you will get a better class of farm laborers and they will earn you more money. The way it is now you do not get the best class. You get the downs and outs; the inefficient who have been rejected from other industries; the booze fighters; the lazy, indolent, purposeless. I mean you get too large a proportion of that class and your system adds to the number.

"You are a good man to work for," said Mr. Rodney, "as good as you can be under the system, but I won't stay with you another year; I can't afford it. I've got to have more money and I am going to the city to engage in a manufactory or to the hills to work in the mines. You see that my expenses are increasing as my children grow and I can not meet the demands on $3 a day."

G. L.

Cashmere Fruit Growers.

J. W. Sussex has been named by the Cashmere Fruit Growers' union directors to succeed C. W. White as manager of that institution. Mr. Sussex by profession is an engineer and architect, but while pursuing these occupations he has been a close observer of the fruit game and has always evinced a strong interest and liking for it. He has been a resident of Chelan county for the last 10 years and has a wide circle of acquaintances and friends.

NEXT WEEK.

Owing to lack of space this week the Farmer is unable to publish the enthusiastic address delivered by Riley Rice of Cottonwood, Idaho, retiring president of the Washington and Northern Idaho Farmers' union, at the Spokane convention. This address will be given in full, however, in next week's issue, and should be read by every farmer in the state.

Three-Hundred-Year-Old Prophecy of German Monk

A most remarkable prophecy, made by the German monk, Fratre Johannes, in the year 1600, seems to be nearing a fulfilment. As a key to the prophecy one has only to realize the following:

The kaiser is a German Lutheran—he has a withered arm.

Germany is the Black Eagle.

Austria, her ally, has also an eagle.

Russia is the White Eagle.

France is the cock.

England, the British empire, is the leopard.

The following prophecy by the monk Fratre Johannes, who lived about the year 1600, is remarkable in its application to the present world crisis. The authenticity of this prophecy was at first doubted because of a few discrepancies in the text but the matter was referred to the newspaper information bureau at Washington, and Director Frederick J. Hawkins replied as follows:

"In reply to your letter asking whether the prophecy by the monk, Fratre Johannes, is real, we would say that this prophecy was discovered in old parchment in the convent of the Holy Ghost, at Wismar, in Germany, and is kept under glass in the town hall of this city. There have been numerous translations which text vary somewhat. We are returning your copy of this prophecy.

"The discrepancies which we noted, and which you also may notice, are probably due to the variations in the translation of the text. On the whole it is a remarkable prophecy. It is as follows:

The real antichirst will be one of the monarchs of his time, a Lutheran Protestant. He will invoke God and give himself out as his messenger, or apostle.

This prince of lies will swear by the Bible. He will represent himself as the arm of the most high, sent to chastise corrupt peoples.

He will have only one arm, but his innumerable armies, who will take for their device the words, "God is with us," will resemble the infernal regions.

For a long time he will act by craft and strategy. His spies will overrun the earth, and he will be master of the secrets of the mighty. He will have learned men in his pay, who will maintain and undertake to prove his celestial mission.

A war will afford him the opportunity of throwing off the mask. It will not be in the first instance a war which he will wage against a French monarch. But it will be one of such nature that after two weeks all will realize its universal character.

Not only all Christians, but Musselmans and even more distant peoples will be involved. Armies will be involved from the four quarters of the earth.

For by the third week the angels will perceive that the man is antichrist and that all will become his slaves if the do not overthrow this conqueror.

Will Massacre Helpless.

Antichrist will be recognized by various tokens—in special he will massacre the priests. the monks, the women, the children and the aged. He will show no mercy, but will pass, torch in hand, like the barbarians, but invoking Christ.

His words of imposture will resemble those of Christians, but his vows of all the human race.

He will have an eagle in his arms, there will also be an eagle in the arms of his confederate. But the latter will be a Christian and will die from the malediction of Pope Benedict who will be elected at the beginning of the reign of antichrist.

In order to conquer antichrist, it will be necessary to kill more men than Rome ever contained. It will need the energies of all the kingdoms, because the cock, the leopard and the white eagle will not be able to make an end of the black eagle without the aid of the prayers and the vows of the human race.

Never will humanity have been faced with such a peril, because the triumph of the antichrist would be that of the demon, who will have taken possession of his personality.

The Beast Incarnated.

For it has been said that 20 centuries after the incarnation of the word the beast will be incarnated in his turn and will menace the world with as many evils as the divine incarnation has brought it graces.

Toward the 2000 antichrist will be made manifest. His army will surpass in number anything that can be imagined. There will be Christians among his cohorts and there will be Mohammedans among the defenders of the lamb as well as some heathen soldiers.

For the first time the lamb will be red—for blood will flow in the domains of the four elephants at once.

The black eagle will hurl itself upon the cock, which will lose many feathers. It will soon be exhausted, but for the leopard and its claws.

The black eagle, who will come from the land of Luther, will make a surprise attack upon the cock.

The white eagle will come from the north.

The black eagle will find itself forced to let go the cock in order to figat the white eagle, whereupon the cock will have to pursue the black eagle into the land of the antichrist to aid the white eagle.

Great Battle on Lutheran Soil.

The battles fought up to that time will be as nothing compared to that which will take place in the Lutheran country.

When the beast finds himself lost he will become furious.

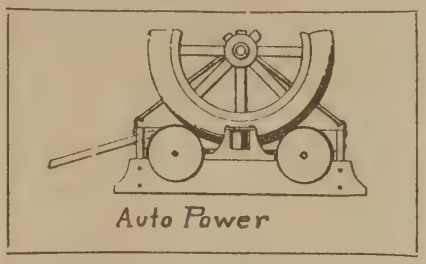
Men will be able to cross the rivers over the bodies of the dead.

Antichrist will sue for peace many times, but the seven angels who march before three animals of the land will have proclaimed that victory will not be given except on conditions that antichrist will be crushed like straw upon the threshing floor.

The three animals will not be permitted to cease fighting so long as antichrist has soldiers.

It will be made manifest that the combat which will be fought out in that part of the country in which antichrist forges his arms, is no human conflict. The animal defenders of the lamb will exterminate the last army of antichrist.

Antichrist will lose his crown and will die in solitude and madness. His empire will be divided into 22 states, but none will have any longer fortifications, armies or ships of war.

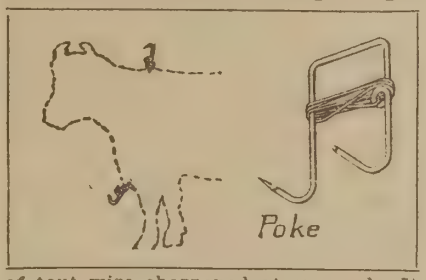


The white eagles, by order of Michael, will drive the Crescent out of Europe, where there will be no longer any but Christians. He will install himself at Constantinople.

Inventions.

By C. J. LYNDE, Macdonald College, Quebec.

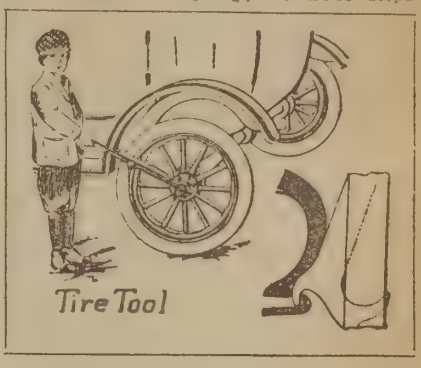
Takes Power From an Automobile.



On this device, each rear wheel of the automobile runs on a belt between two pulleys and it is kept on the belt

by a side roller, which bears against the tire. The car is prevented from moving by straps attached to the rear axle.

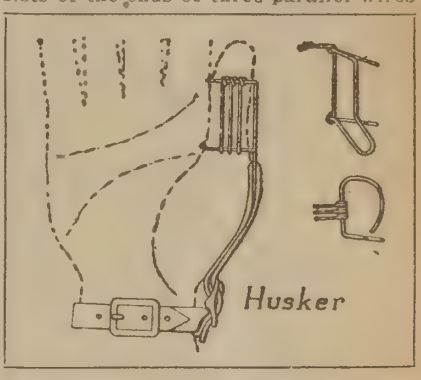
Simple Cattle Poke.



This poke is made of a single length

of tout wire sharpened at one end. It is insreted through the hide at either or both of the positions shown and is secured by light wire or cord.

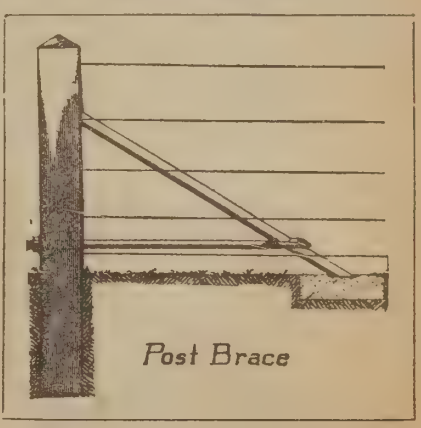
Tire Tool.



In using this tool the operator first inserts the "foot" flatwise between the flange of the shoe and the rim, and then turns it rapidly; he next slips

the socket over the hub, and removes the tire by running the tool around the wheel. To replace the tire he reverses the tool and repeats these operations backward.

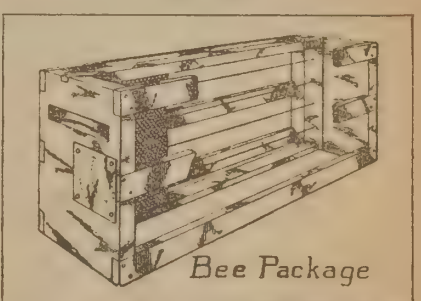
Corn Husker.



The husking part of this device consists of the ends of three parallel wires

which project at right angles to the thumb. These are drawn along the husk and rip it from the ear.

Fence Post Brace.



The diagonal rod here has one end bearing against a metal seat near the

top of the post and the other against a block of concrete. It acts as a brace and is held in place by the horizontal tie rod.

Bee Shipping Package.

To ship bees in this box it is necessary to place the comb frame in the hive until the queen has become accustomed to the comb and until the required larvae, eggs and honey have been deposited. The frame is then placed in the package, the sides, top and bottom are covered with netting and the bees are inserted through the end opening by means of a funnel.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Proper Diet and Exercise Best Cure for "Nervousness"

Dr. Hirshberg.

You say you are nervous. Your friends tell you so. Your family, whom you annoy with your grumbles and complaints, say you're "a bundle of nerves" and worse. Perhaps some doctor, who isn't patient or is too busy, dismiss you with the nearly flippant diagnosis of "neurasthenia," "psychaesthenia," "run down nerves," "nervous exhaustion" or "hysteria."

That which you do too often or too long becomes, as it were, almost a part of your nature. If you spend much of your day in the practice of complaints, fixed ideas and emotional outbreaks, by the very habits a pathological state of illness becomes a part of your natural makeup.

Hence the restless, dissatisfied, pessimistic, impatient and melancholic demeanor, exaggerated, perhaps, by an acute illness or a momentary trick of bad fortune, becomes incorporated in every thread of your flesh and sinews.

To dismiss such a condition as "nervous" or "hysterical" doesn't help you over much. True enough, it may have its origin in a real physical disorder, in loss of sleep, worry from actual causes or fancied ones, from faulty food, excesses of play or of passion—seldom, if ever, is the source of the mischief too much work.

Foods to Avoid.

Individuals accustomed to meat and fish and eggs at breakfast and also at every other meal may encourage a visitation yclept "nervous."

Out of much milled wheat flour, polished rice and other over-refined cereals certain milks and some tinned foods may come restless, twitchy, jerky or palsied symptoms. A deficiency in certain ingredients of such pobulum, whether they be "vitamines," enzymes or other needed constituents, invites a vicious circle of ill health that requires for relief a ration with these materials in them.

The large intestine or colon of many persons is clogged and obstructed. It is as plainly apparent as the noonday sun on a clear day that to blame the liver or the nerves at such times is to beg the question. An inactive occupation or mode of life is only indirectly at fault. The type of foods as well as the method of disposal of the undigested remnants has as much to do with it.

Foods That Aid.

Green vegetables, peas, beans, fruits, milk, berries, cooked cereals and corn, lean meat, butter, buttermilk, boiled water-dried fruits, potatoes, almonds and the yolks of eggs are safe if eaten sparingly and often rather than too much in two or three meals.

Candies, cane sugar, tea, coffee, beer, wines, gin, rum, whisky and fancy drinks, no less than starchy, malted foods may very well be dispensed with if the emotions and the muscles are unstable enough to give the victim the name of nervous.

Perennial good humor, an adequate amount of study and muscular effort, play, cheerfulness, geniality, fresh whole grain breads with their mineral fertilizers, sunlight, fresh fruits and vegetables, eight or nine hours of real sleep in a large bed and in an airy room alone will go far—if the thoughts are engaged by day upon some systematized form of learning, work, religion or philosophy—to do away with "nervousness," as it will no doubt long continue to be called.

Fur Trade of United States.

During the year ended June 30, 1917, the foreign trade of the United States in raw and manufactured furs reached nearly, if not fully, the highest level of years preceding the war. The imports were valued at $21,553,375, while the exports amounted to $15,729,160.

THE BARRIER

By REX BEACH

Author of "The Spoilers," "The Ne'er-Do-Well," "The Silver Horde," etc.

Copyright, 1908, by Harper & Brothers.

SYNOPSIS.

Gale, trader, of Flambeau, has a beautiful daughter, Necia, and two half-breed children. Alluna, a squaw, is their mother. Lieutenant Burrel is sent to Flambeau to establish a military post. He and Necia become close friends. "No Creek" Lee, an unsuccessful miner, strikes a vein of gold. Stark comes to Flambeau to grubstake the miners and start a saloon. Runnion, a desperado, is his assistant. Stark's presence in the camp causes Gale and his squaw great uneasiness. Lee, Stark, Runnion, Gale and Poleon, a Frenchman, leave for the claim secretly so as to prevent a stampede. Necia hears of it, and, longing for riches so she may be as others girls, persuades Burrell to accompany her on a shortcut to the claim. Burrell, who is unpopular in Flambeau, chooses this means of beating the men at their own game. That night by the campfire Necia, realizing her peril, cautiously awakens in the lieutenant his slumbering conscience. They reach camp before the others the next morning and Necia stakes three claims. While Stark, Runnion and Poleon are locating Runnion makes some insinuations about Necia and Burrell. Poleon, who loves Necia, swears that either Runnion or Burrell will pay for them with his life. That night as Star is telling Necia a story a shot rings out and Gale jumps across the room shouting "My God! I've killed him." But the bullet misses Stark by inches. When Alluna hears of the affair she tells Gale that Stark is bullet-proof and gives him a knife, begging him to kill Stark as soon as possible. Burrell knows that he loves Necia, but, thinking she is a half-breed, he is afraid to marry her on account of what it would mean to his family, his position and his honor. One day as Necia is alone in the store Runnion tells her that he is wiling to marry her, even if the lieutenant has thrown her over and the story is being told on the street. Later Necia acknowledges to Poleon that while Burrell has sworn his love for her he has never spoken of marriage. She declares that she has never been unmaidenly, but that since the men are talking she will be married by Sunday, and that it may as well be to Poleon as anybody. They send for Burrell and Necia hides so that she may hear his answer for herself.

CHAPTER XII.

A Tangled Skein.

When Burrell entered he wasted no time in greetings.

"I know why you sent for me, Poleon. I've heard the news, and I would have been up anyhow to congratulate her very soon. I call it pretty fine."

"Yes, dere's been beeg strike all right, an' Necia is goin' be riche gal."

"I'm as pleased as if the claim were mine, and you feel the same way, of course."

The Frenchman nodded. "I love Necia very much, lak'—well, lak' I'm broder to her." The knowledge that she was listening made him very uncomfortable—in fact, this whole affair savored more of double-dealing and treachery than anything he had ever attempted, and it went sorely against his grain, but it had presented itself as the only way to help her, and he proceeded, groping haltingly for fit expression. "Dere's t'ing I want for talk 'bout wit' you, but I'm scare' you'll t'ink I'm butt in."

"Nonsense," said Burrell. "I know you too well for that."

"You know me for good man, eh? An' you know I ain't try for bre'k up oder fellers' biznesse, never! Wal, I'm come to you now lak' wan good man to 'noder biccause I'm got bad trouble on de min' an' you mus'n 't get sore.'

"There's do danger, Poleon. Let's have it. If there is anything I can do you may count on me."

"Wal," he began, nervously, clearing his throat, 'it's lak' dis. Dere's feller been talk some 'bout Necia, an' it ain' nice talk neider."

"Who is he?" exclaimed the soldier, in a tone that made the girl's heart leap.

"Wait! Lemme tol' you w'at he say, den we'll talk 'bout feex 'im plaintee. He say dere's joke down on Stark's saloon dat Necia Gale is mak' fool of herse'f on you, an' dat you ain' care for marry her."

"Runnion!" cried Burrell, and started for the door. "I'll settle with him now for fair!" But Poleon blocked his way, and, observing him gravely, continued, in a tone that the other could not disregard nor mistake:

"No, M'sieu', before you pass on dat place you'll tol' me if it's true."

"True!" the lieutenant retorted, angrily. 'What business is it of yours? This concerns me."

"An' me, too! I'm w'at you call gardeen for Necia till John Gale come back, an' I'm broder of her, too. You promis' jus' now you don' get mad, an' I don' say she's Runnion neider w'at spik dose t'ing; dere's more dan 'im been talkin'. Is it true?"

His sternness offended Burrell, for the soldier was not the kind to discuss his affairs in this way, therefore he drew back scowling.

"Poleon Doret," he said, "it's not one's enemies who do him injury, it's his damned fool friends. I have learned to regard you highly because you are a brave man and an honest one, but it seems that you are a sentimental idiot."

"Dem is tough word," Doret replied. "But dere's reason w'y I can't tak' on no madnesse. You say I'm hones'. Wal, I'm hones' now, an' I come to you wit' fair words an' I show my han' to you—I don' hol' out no cards, M'sieu'—but I don' t'ink it is you who have play square, altogeder. I'm Necia's frien', an' I'll fight for her jus' so queecker lak' you, but I mus' know dis t'ing for sure, so if you have de good heart an' de courage of good man you'll tell me de truth. Do you have the feelin' for marry on her?"

The pause that followed was awkward for both of them, while the girl, who stood concealed near by, held her breath and buried her nails in her palms. Why did he hesitate? Would he never speak? It seemed not, for he swung between diverse emotions—anger that this outsider should question him on so intimate a matter, chagrin at the knowledge of having injured Necia, and rage, blind rage, at the thought of its becoming a bar-room topic. Gradually the conviction grew that it was not a question of idle curiosity with Doret, and the man's history recurred to him. No wonder he was interested in the girl, no wonder he wished to guard her; he had been a brother indeed, even as he said, and he could have no motive save an honorable one. It never occurred to the soldier that this Frenchman could harbor feelings akin to his own. The man was rough and foreign; his thoughts had been couched in harsher language, perhaps, than he intended; moreover, the fellow's high sense of honor was a byword—and of a sudden the desire to set himself right in this man's eyes dictated his answer.

"I am amazed at myself for listening to you," he said, at last, "and quite shocked, in fact, at my answering your questions, but perhaps I'd better, after all. First, however, let me say that the little girl is just as pure now as she was before she knew me—"

Poleon threw up his hand. "M'sieu,' dat's more closer to de insult dan w'at you call me jus' now. You don' need for spoke it."

"You're right! There's no need to tell you that. As for showing her certain attentions—well, I admit that I have, as you know, but, thank God, I can say I've been a gentleman and addressed her as I would the fairest lady I've known."

"An' you mean for marry, eh?" probed the other.

Now, no man could have answered such a direct question easily, and in this case it was especially hard for the Kentuckian, who was torn between his ungovernable desire and that decision which cold reason had thrust upon him. He wanted to say, "Yes, I'll marry her tomorrow," but something bade him pause before he sacrificed upon this altar of a youthful love his life, his hopes, his ambitions. Had he not wrestled with himself for months in thinking it all out, until his mind was weary and listless with the effort? For the greatest test that tries a man's soul and compels him to know himself had not yet come to Meade Burrell; wherefore, he hesitated long.

"I did not say so," he declared, at last. "It's a thing I can't well discuss, because I doubt if you could understand what I would say. This life of yours is different from mine, and it would be useless for me to explain the reason why I can not marry her. Leaving out all question of my sentiment, there are insurmountable obstacles to such a union; but as to this talk, I think that can be stopped without annoyance to her, and as for the rest, we must trust to time to bring about a proper adjustment——"

A low, discordant sound of laughter arrested his words, and, turning, he beheld Necia standing revealed in the dimness.

"What an amusing person you are!" she said. "I've had hard work holding in all this time while you were torturing your mind and twisting the honest English language out of shape and meaning. I knew I should have to laugh sooner or later."

"What is the meaning of this?" he demanded. "Is it a joke?"

"Indeed it is," she declared, laughing afresh, "and the best I've ever enjoyed. Wasn't it funny, Poleon"—she turned gaily to the Frenchman, but he stood like one petrified—"to see him debating coolly whether he cared for me enough to face the world with me, and trying to explain to you that he was too good to marry a squaw? Oh, you were very gentlemanly about it, sir, and you wouldn't have hurt my feelings for the world!"

"Necia!"

"That's your Dixie chivalry, I suppose. Well, I've played with you long enough, Lieutenant Burrell, I'm tired of the game, and you interest me no longer."

"You—you—say you've been playing with me!" stammered the man. The bottom of things seemed suddenly to slide from under him; he was like one sinking in some hideous quagmire. He felt as if he were choking.

"Why, of course," she cried, scornfully, "just as you took me up for amusement. You were such a fine, well-dressed, immaculate mound of conceit that I couldn't resist the temptation, and you hid your condescension so poorly that I thought you ought to be taken down a peg. I knew I was a squaw, but I wanted to see if I were not like other women, after all, and if you were not like other men." She was talking rapidly now, almost shrilly, for she had never attempted to act before, while he stood dazed and speechless, fumbling at his throat while she railed at him. "You needn't waste time debating whether I'm good enough for you, because I'm not—decidedly, I'm not your kind, and you are a joke to me."

He uttered an inarticulate cry, but she ran on unheeding, her eyes wide and glowing like coals, her lips chalk-white. "You see, it's time I stopped such foolishness, anyhow, for I'm to be married on Sunday."

"You are going to be married?" he muttered, laboriously.

"Yes, to Poleon. Why, that's been understood for years."

He whirled upon the Canadian in a fury, and his words came hot and tumbling.

"So you're in this, Doret. You're a part of this little farce. You trapped me here to make a fool of me, did you? Well, I can settle with you—"

"D-don't blame him!" cried the girl, hysterically. "It is all my doing. He had no part in it."

Burrell wheeled back to the Frenchman again. "Is this true?"

"Yes," said Doret, in a restrained voice. "Dis ain' no work of mine."

"You're a liar!" breathed the Kentuckian, now fairly wild with anger; but the other looked him squarely between the eyes and made no move.

"M'sieu'," he cried, "I'm livin' t'orty year, an' never took no nam' lak' dat before, but dere's reason here w'y I can't mak' no answer." He inclined his head towards the girl, and before Burrell could break out again he checked him.

"It's no good mak' fight wit' lesser dan two people. You've tol' me dat you are gentleman. Wal, I ain' nobody but trapper an' trader, but I don' spoil de name of no good girl, an' I don' quarrel in presence of lady, so mebbe, affer all, dere's mistak' somew'ere, an' I'm gentleman mese'f 'stead of you."

"Why, you aren't really angry, Lieutenant?" mocked Necia. "It's only the joke of an ignorant half-breed girl whose sense of humor is all out of gear. You mustn't quarrel over a squaw!"

She taunted him like a baited badger, for this thing was getting beyond her control and the savage instincts of the wilderness were uppermost.

"You are quite right," he replied. "I am very foolish, and the laugh is with you." His lips tried to frame a smile, but failed, and he added: "Your wit is not kind, that is all. I beg you both to accept my congratulations on your nuptials. Undoubtedly, you will be happy together; two people with such similar ideas of humor must have much to enjoy in common." He bowed low and, turning, walked out.

The moment he was gone she cried, breathlessly:

"You must marry me, Poleon. You've got to do it now."

"Do you mean dat for sure?" he said.

"Can't you see there's nothing else for it, after this? I'll show him that he can't make a toy to suit his convenience. I've told him I would marry you on Sunday, and I'll do it or die. Of course you don't love me, for you don't know what love is, I suppose; how—could you?" She broke down and began to catch her breath amid coughing sobs that shook her slender body, though they left her eyes dry and feverish.

"I—I'm very unhappy, b-but I'll be a good—wife to you. Oh, Poleon, if you only knew—"

He drew a long breath. When he spoke his voice had the timbre of some softly played instrument, and a tremor ran through his words.

"No! I don' know w'at kin' of love is dis, for sure. De kin' of love I know is de kin' I sing 'bout in my songs; I s'pose it's different breed to yours, an' I'm begin to see it don' live nowhere but on dem songs of mine. Dere's long tam' I waste here now—five year—but tomorrow I go again lookin' for my own countree."

"Poleon!" she cried, looking up with startled eyes. "Not tomorrow, but Sunday—we will go together."

He shook his head. "Tomorrow, Necia! An' I go alone."

"Then you won't—marry me?" she asked, in a hushed and frightened voice.

"No! Dere's wan t'ing I can't do even for you, Necia, dere's wan t'ing I can't geeve, dat's all—jus' wan on all do worl'. I can't kill de li'l' god wit' de bow an' arrer. He's all dat mak' de sun shine, de birds sings, an' de leaves w'isper to me; he's de wan li'l' feller w'at mak' my life wort' livin' an' keep music in my soul. If I keel 'im dere ain' no more lef' lak' it, an' I'm never goin' fin' my lan' of content, nor sing nor laugh no more. I'm t'inkin' I would rader sing songs to 'im all alone onderneat' de stars beside my campfire, an' talk wit' 'im in my bark canoe, dan go livin' wit' you in fine house an' let 'im get col' an' die."

"But I told him I'd marry you—that I had always intended to. He'll believe I was lying," she moaned, in distress.

"Dat's too bad—but dis t'ing ain' no doin's wit' me. Dere's wan t'ing in dis worl' mus' live forever an' dat's love—if we kill 'im den it's purty poor place for stoppin' in. I'm cut off my han' for help you, Necia, but I can't be husban' to no woman in fun."

"Your foolish head is full of romance," she burst out. "You think you're doing me a favor, but you're not. Why, there's Runnion—he wants me so much that he'd 'even marry me'!" Her wild laughter stabbed the man. "Was ever a girl in such a fix! I've been made love to ever since I was half a woman, but at thought of a priest men seem to turn pale and run like whipped dogs. I'm only good enough for a bad man and a gambler, I suppose." She sank to a seat, flung out her arms hopelessly, and, bowing her head, began to weep uncontrolably. "If—if—I only had a woman to talk to—but they are all men—all men."

Poleon waited patiently until her paroxysm of sobbing had passed, then gently raised her and led her out through the back door into the summer day, which an hour ago had been so bright and promising and was now so gray and dismal. He followed her with his eyes until she disappeared inside the log house.

"An' dat's de end of it all," he mused. "Five year I've wait—an' jus' for dis."

Meade Burrell never knew how he gained his quarters, but when he had done so he locked his door behind him, then loosed his hold on thing material. He raged about the room like a wild animal, and vented his spite on every inanimate thing that lay within reach. His voice was strange in his own ears, as was the destructive frenzy that possessed him. In time he grew quieter, as the physical energy of this brutal impulse spent itself; but there came no surcease of his mental disquiet. As yet his mind grasped but dully the fact that she was to marry another, but gradually this thought in turn took possession of him. She would be a wife in two days. That

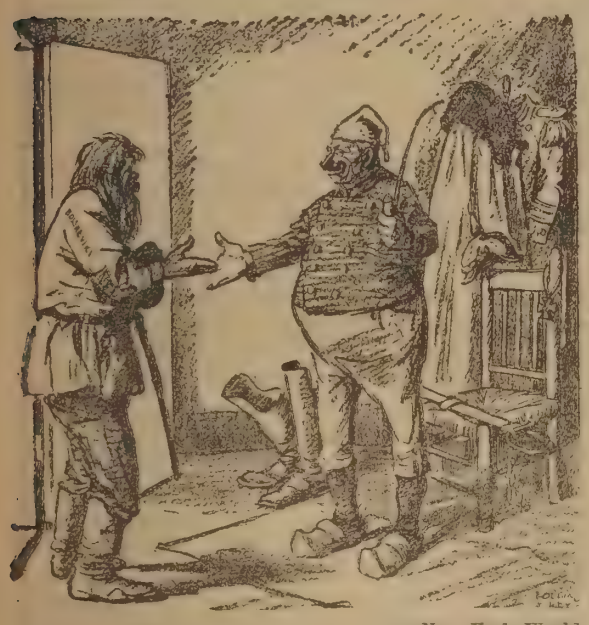
All the World's a Stage, and All the Men and Women Merely Players

National Guardsmen in France

Major Gen. Mann.

Col. MacArthur.

It is announced that the Rainbow division of national guard troops, representing 33 states, has arrived safely in France and is now in final training preparatory for service in the trenches. Major General William A. Mann, shown on the left, is commander of the division which is so representative of America. Colonel Douglas McArthur, on the right, former censor for the war department, is chief of staff. The photograph below was made at one of the final reviews of the Rainbow division when in camp at Mineola, Long Island. While it is not permitted to disclose the identity of units, it may be said that all those which sailed from the United States for France have arrived safely and that some are already in training within sound of the guns on the battle fronts.



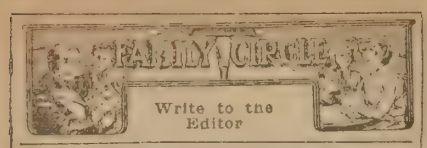
Holy Pools and Mosque of Omar

In the foreground of this view of Jerusalem, now wrested from the Turks by British forces, is one of the holy pools. The mosque of Omar, or the Dome of the Rock, on Mount Moriah, where the old temple altar stood and where the sacrifices were made to God in biblical days, can be seen in the center of the photo. The view shown is near the southern end of the old wall. The fall of Jerusalem was the definite collapse of long-protracted efforts of the Turks to capture the Suez canal and invade Egypt.

Welcome, Comrade

—New York World.

Who's "Strafed" Now?



—Rochester Herald.

Suffragists March on Capitol

Mrs. Carrie Chapman Catt is national president of the national suffrage association. Dr. Anna Howard Shaw is chairman of the woman's committee of the United States council of national defense and one of the leading suffragists of America. Mrs. James Lees Laidlaw is congressional chairman for New York. Miss Mary Garrett Hay has received much of the credit for the recent suffrage victory in New York state. Mrs. Norman De R. Whitehouse is chairman of the New York state suffrage party and like Miss Hay was instrumental in bringing about the suffrage for women of the Empire state. Four hundred women gathered in Washington recently for the 49th annual convention of the National Woman Suffrage association and marched on the capitol to present arguments to their state congressional delegations in favor of the passage of the federal suffrage amendment, re-ported by the house judiciary committee without recommendation. Senators from each state received women from their states in their offices. If the suffrage amendment is defeated at this session the association will probably enter the congressional election next year in an effort to elect enough members to insure passage of the amendment by the succeeding congress. The principal social event of the convention was a reception in honor of Mrs. Carrie Chapman Catt, the national president, and Dr. Anna Howard Shaw, hon-orary president. Mrs. Norman De R. Whitehouse chairman of the New York state woman suffrage party, was presented with a solid gold laurel wreath in recognition of her work in behalf of woman suffrage, it has been announced.

How to Corn Beef

To the Editor: Will you kindly publish a recipe for corning beef?
Driggs, Idaho. C. G.

The following directions are taken from one of the Weekly New Letters of the United States department of agriculture:

Curing meats with brine is a good method for farm use. It is less trouble to pack the meat in a barrel and pour brine over it than to go over it three or four times and rub in salt, as in the dry curing method. The brine also protects the meat from insects and vermin. Brine made of pure water and according to directions in the following recipe should keep a considerable length of time. During warm weather, however, brine should be watched closely and if it becomes "ropy" like syrup, it should be boiled or a new brine made. A cool, moist cellar is the best place for brine curing.

Pure water, salt, sugar or molasses and saltpeter are all the ingredients needed for the ordinary curing of meat.

Meat may be packed in large earthen jars or a clean hardwood barrel. The barrel or jar may be used repeatedly unless meat has spoiled in it. It should be scalded, thoroughly, however, each time before fresh meat is packed. Curing should begin as soon as the meat is cooled and while it is still fresh. Ordinarily 24 to 36 hours after slaughter are sufficient for cooling. Frozen meat should not be salted as the frost prevents proper penetration of the salt and uneven curing results.

Corned Beef.

The pieces commonly used for corning are the plate, rump, cross ribs and brisket or, in other words, the cheaper cuts of meat. The loin, ribs and other fancy cuts are more often used fresh. The pieces for corning should be cut into convenient sized joints, say five or six inches square. It should be the aim to cut them all about the same thickness that they will make an even layer in the barrel.

Meat from fat animals makes choicer corned beef than that from poor animals. When the meat is cooled thoroughly it should be corned as soon as possible as any decay in the meat is likely to spoil the brine during the corning process. Under no circumtance should the meat be brined while it is frozen.

Weigh out the meat and allow eight pounds of salt to each 100 pounds; sprinkle a layer of salt one-quarter of an inch in depth over bottom of the barrel; pack in as closely as possible the cuts of meat, making a layer of five or six inches in thickness, then put on a layer of salt; follow with another layer of meat. Repeat until the meat and salt have all been packed in the barrel, care being used to reserve salt enough for a good layer over the top. After the package has stood over night, add, for every 100 pounds of meat, four pounds of sugar and four ounces of saltpeter, dissolved in a gallon of tepid water. Three gallons more of water should be sufficient to cover this quantity. In case more or less than 100 pounds of meat is to be corned, make the brine in the proportion given. A loose board cover, weighted down with a heavy stone or piece of iron, should be put on the meat to keep all of it under the brine. In case any should project, rust would start and the brine would spoil in a short time.

It is not necessary to boil the brine except in warm weather. If the meat has been corned during the winter and must be kept into the summer season, it would be well to watch the brine closely during the spring, as it is more likely to spoil at that time than at any other season. If the brine appears to be ropy or does not drip freely from the finger when immersed and lifted it should be turned off and new brine added after carefully washing the meat. The sugar or molasses in the brine has a tendency to ferment and, unless the brine is kept in a cool place, there is sometimes trouble from this source. The meat should be kept in the brine 28 to 40 days to secure thorough corning.

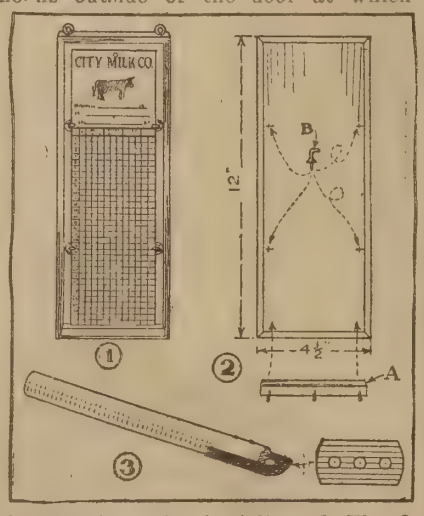
Flour in Five-Pound Packages.

Boston reports considerable opposition to the order of the food administration eliminating the small packages of flour formerly furnished by the mills and generally purchased by the population in the east. While it is recognized that the sole object was to reduce the cost to the consumer, yet, it is stated, many families find it difficult to finance even the purchase of eighth-barrel bags, but have been able to buy and pay for a five or ten poung bag without any great difficulty. The grocers, who are now repacking flour in smaller bags, claim that the cost is greater and this is one of the reasons why grocers have been selling at retail five-pound bags of flour for 50 cents, the customer to take it away.

Farms With Woodlots.

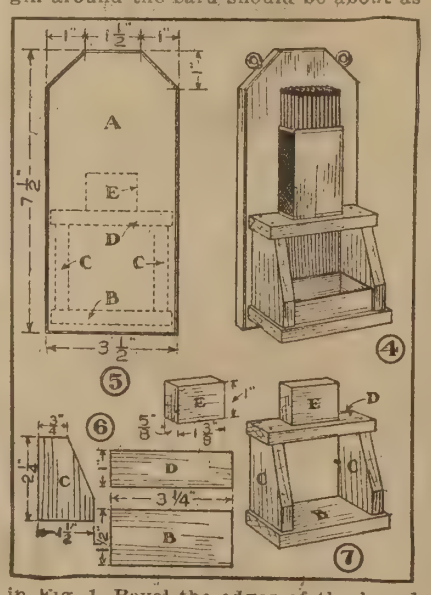
Farmers with timber on their land have a big opportunity this year. An opportunity to save money by cutting their own wood as a substitute for coal and selling a good portion of it to relieve a serious situation in the coal market and benefit the country at large. Many farms have wood lots from which wood may be cut without injury to saw timber which may be growing. Scrub timber, properly called "weed" trees, can be cut and instead of taking away any value from the property actually better the condition of the timber which may later be cut for lumber.

Handicraft For Boys



By A. Neely Holl.

Gifts for Christmas.



The articles shown in the illustrations will appeal most to my readers who prefer ideas for things quickly put together, perhaps, but even the boy who likes more complicated problems will enjoy making these practical articles for the home.

Milk-Card Board and Seam-Ripper.

The milk-card board in Fig. 1 is provided with screweyes to hang upon hooks outside of the door at which

the morning milk is delivered. Fig. 2 shows a pattern for the board, but because milk cards vary in size you had better measure the card for which the board is to be used, to see that it fits, before you begin work. The margin around the card should be about as

in Fig. 1. Bevel the edges of the board as shown. Then prepare the strip A (Fig. 2), and fasten it with brads along the lower edge of the board for the card to rest upon. Give the board two coats of shellac, varnish, or paint; then when it is dry, screw four hooks into it at the points indicated (B, Fig. 2), to hold the edges of the card, and a pair of screweyes into the top edge, for hangers.

Mother would appreciate the seam ripper shown in Fig. 3. All that you need is a safety-razor blade, and a short stick whittled round for a handle. Slot one end of the handle, slip the blade into the slot, and fasten with small nails driven into the handle and through a pair of the holes in the blade. Varnish the handle and the little tool will be completed.

Holder for Safety Matches.

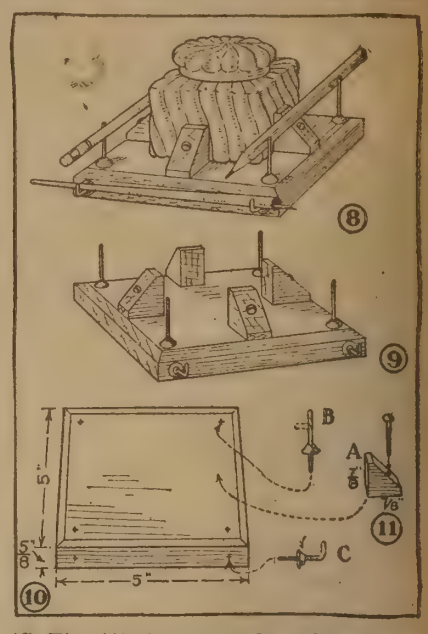


Fig. 4 shows a handy holder for safety matches. The cover of the safety-match box sets down over the block E (Fig. 7), to hold the matches and provide the match scratcher. Block E raises the match ends an inch above the cover. The safety-match box stands on shelf B, between ends C (Fig. 7), for a burnt-match receptacle.

The match-box holder may be built up of cixar-box strips or wood one-quarter or three-eighths-inch thick. Fig 5 shows a pattern for back board A, and Fig. 6 shows the patterns for the ends of pieces C (Fig. 7), so their back edges are in a line with one another. Screw a pair of screweyes into the top of back board A, for hangers.

Inkstand, Penrack, Etc.

The inkstand and penrack shown in Figs. 8 and 9 is an attractive article for the library table, or one's writing desk. It may be made to hold a common ink bottle, but an ornament the other parts. Fasten block E to shelf D, in the center of its length, and about one-sixteenth of an inch inside of the back edge; then nail B and D to al bottle will look better and will not cost much.

Fig. 10 shows a pattern for the base board, and Fig. 11 a pattern for the four blocks A which hold the bottle in position upon the base. Bore a hole through each of the four blocks, and drive round-head brass screws through the holes to fasten the blocks upon the base. Screw a pair of brass hooks

(C, Fig. 10), into one edge of the base, for a penrack. Then bend up the end of the hook of four more of the screw-hooks, so as to make straight posts (B, Fig. 10), and screw these into the base, one at each corner. Fig. 8 shows how the posts form pencil racks.

As this inkstand will be kept upon a desk or table, great care should be used in sandpapering and finishing the wood. Glue a piece of felt to the under side of the base.

(Copyright, 1915, by A. Neely Hall.)

HOLIDAY-TIME IS DANGER-TIME FOR FIRES

Don't let the Fire Fiend Destroy Your Property and Murder those who are Nearest and Dearest

HOLIDAY fires in stores, churches and bazaars, while filled with people, are usually holocausts.

Light, inflammable decorations make fires easy to start and easy to spread.

A match, a gas flame, or an electrical defect may do it.

Gas jets should be watched closely. Decorations may be carried against them by air currents.

Smokers should not be permitted to light cigars inside buildings.

Not the slightest change should be made in electrical wiring without consulting an expert electrical inspector.

Defective heating and lighting equipments, combustible rubbish and furnace rooms are prolific causes of winter fires.

Such fires are unnecessary and will not occur in premises properly cared for.

Every year in America many children are burned to death by fire from Christmas candles.

CHRISTMAS TREES SHOULD NOT BE DECORATED with paper, cotton or any other inflammable material.

Metallic tinsel and other metallic decorations only should be used, and the tree set securely so that children can not tip it over.

Cotton SHOULD NOT BE USED to represent snow. If you must have snow, use powdered mica or asbestos fiber.

Children SHOULD NOT BE permitted to light or relight candles unless parents are present. Children frequently set fire to their clothing instead. Electric illumination is safer.

Matches should not be left within reach of children at holiday time.

Candles are meant to be lighted, and if the children can get matches, they are likely to experiment disastrously.

Trees SHOULD NOT BE allowed to remain in buildings after the holidays. The tree itself ignites readily when the needles become dry. A large number of fires usually occur in January from this cause.

Where are you going to put the boxes, excelsior, and other packages of combustible material that come with Christmas gifts? Unknown to you, THE LIFE OF A CHILD MAY HANG UPON YOUR ANSWER.

Patterns

1937—Junior dress. Cut in 3 sizes: 12, 14 and 16 years. It re quires 3 1-4 yards for the dress, and 3 yards for the over-blouse, for a 14-year size, in 27-inch material. Price 10 cents.

2046—Ladies' house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6 1-2 yards of 44-inch material for a 38-inch size. The skirt measures about 2 2-3 yards at the foot. Price 10 cents.

2139—Child's set of short clothes. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. The dress will require 2 1-4 yards of 36-inch material. The slip 1 1-2 yards, the drawers 1 1-4 yards, for a 4-year size. Price, 10 cents.

2184-2187—A charming three-piece suit. Coat-waist 2184 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2 3-8 yards of 36-inch material for the waist, and 3 3-8 yards for the blouse, for a 36-inch size. Skirt 2187 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure, and requires 3 3-8 yards of 36-inch material for a 24-inch size. The skirt measures about 2 1-2 yards at the foot. Two separate patterns, 10 cents for each pattern.

2301—Child's underwaist and drawers. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. Size 10 requires 1 5-8 yards for the waist and 2 1-2 yards for the drawers, of 27-inch material. Price, 10 cents.

2305—Ladies' apron. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 3 5-8 yards of 36-inch material. Price, 10 cents.

2309—Ladies' dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6 1-2 yards of 44-inch material for a 36-inch size. The skirt measures about 2 yards at the foot. Price, 10 cents.

2311—Girls' dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 will require 3 1-2 yards.

2312—Dress for misses and small women. Cut in 3 sizes: 16, 18 and 20 years. Size 16 requires 4 5-8 yards of 44-inch material. The skirt measures about 2 yards at the foot. Price, 10 cents.

2314—Girls' gymnasium suit. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. Size 12 requires 4 yards of 44-inch material. Price, 10 cents.

2320—Girls' dress with or without jumper. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. Size 10 requires 2 3-4 yards of 44-inch material for the dress, and 1 3-8 yards for the jumper. Price, 10 cents.

2328—Boys' mackinaw. Cut in 5 sizes: 8, 10, 12, 14 and 16 years. Size 14 requires 3 1-2 yards of 44-inch material. Price 10 cents.

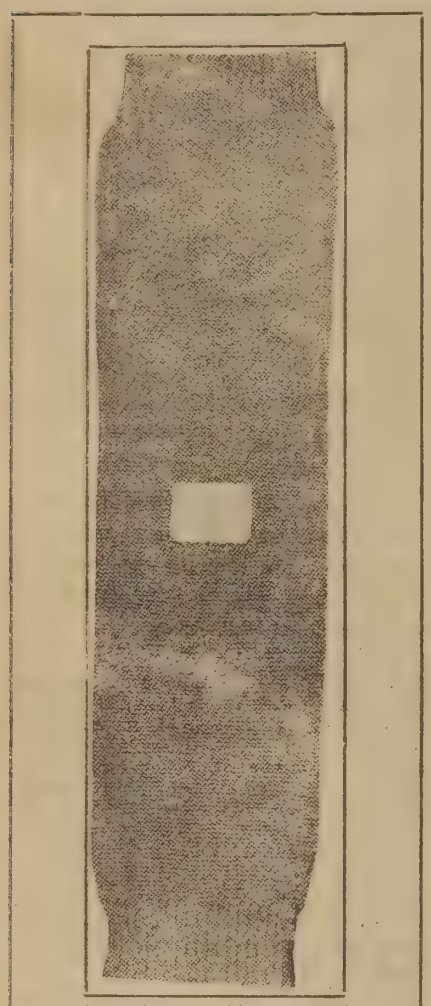
STANDARD OIL COMPANY (CALIFORNIA)



PERFECTION OIL HEATER

Here Are Complete Instructions for Red Cross Knitters

The following directions for knitting articles needed by our soldiers are taken from a pamphlet issued by the American Red Cross Woman's Bureau at Washington, D. C.

As the amount of yarn in hanks varies with the different makes, and as knitters are apt to use the size needles preferred, ample allowance of wool has been made for each garment in an endeavor to provide for varying conditions. If the amount stipulated

Sleeveless sweater before sides are sewed together.

is found too little or too much, it is a simple matter to increase or decrease it in accordance with the needs.

Where the yarn furnished by the supply bureau and knitting needles, as prescribed in this pamphlet, are used and directions herein given are followed exactly, the articles will be altogether satisfactory. If, however, a different size yarn or needle is used, knitters must be careful to observe the measurements given in each case, even though a larger or smaller number of stitches may be required.

Sleeveless Sweater.

General Directions.

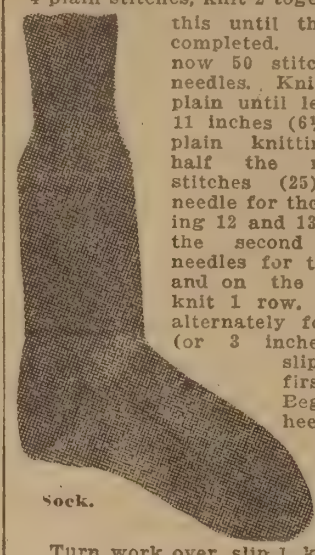
Stitches should not be cast on too tightly.

Knitting should be done evenly and firmly and all holes should be avoided.

Joining should be done by splicing or by leaving two or three inches at each end of the yarn to be darned in carefully.

All knots, ridges or lumps should be most carefully avoided, especially in socks, as they are apt to blister the feet.

Sleeveless Sweater.



Two and one-half hanks of yarn (⅝ pound); one pair Red Cross needles No. 3.

Cast on 80 stitches. Knit 2, purl 2 stitches, for 4 inches. Knit plain until sweater measures 25 inches. Knit 28 stitches, bind off 24 stitches for neck, loose. Knit 28 stitches. Knit 5 ridges on each shoulder, cast on 24 stitches. Knit plain for 21 inches. Purl 2, knit 2 stitches for 4 inches. Sew up sides, leaving 9 inches for armholes. Two rows single crochet around neck and 1 row single crochet around the armholes.

Medium Sized Man's Sock.

Four Red Cross needles No. 1; 1½ hanks of yarn (⅝ lb.)

Set up 60 stitches, 20 on each of three needles. Knit 2 plain and 2 purl for 35 rows (4½ inches). 36th row knit 4 plain stitches, knit 2 together; repeat this until the round is completed. There are now 50 stitches on the needles. Knit 50 rows plain until leg measures 11 inches (6½ inches of plain knitting). Take half the number of stitches (25) on first needle for the heel (leaving 12 and 13 stitches on the second and third needles for the instep), and on the 25 stitches knit 1 row, purl 1 row alternately for 26 times (or 3 inches), always slipping the first stitch. Begin to turn heel on the wrong side, slip 1, purl 13, purl 2 together, purl 1,

Sock.

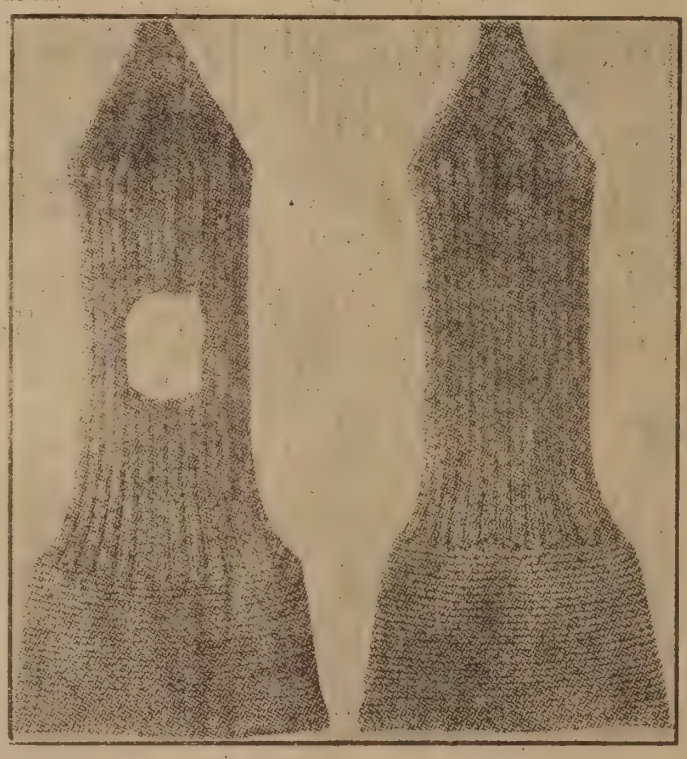
Turn work over, slip 1, knit 4, slip 1, knit 1 and pass it over slipped stitch, knit 1. Turn, slip 1, purl 5, purl 2 together, purl 1. Turn, slip 1, knit 6, slip 1, knit 1 and pass it over slipped stitch, knit 1. Continue working toward the sides of the heel in this manner, leaving 1 more stitch between decreases on every row until all the stitches are worked in. There should then be 15 stitches on the needle. Pick up 13 stitches on side of heel, now knit the 25 stitches on second and third needle on to one needle, which becomes your second needle; with your third needle pick up the 13 stitches on other side of heel, and knit 7 stitches off your first needle so that you will now have 21 stitches on the first needle, 25 stitches on the second needle and 20 stitches on the third needle. First needle (a) knit to within three stitches of end, knit 2 together, knit 1. Second needle (b) knit plain. Third needle (c) knit 1, slip 1, knit 1, pass slipped stitch over, knit plain to end of needle. Knit around plain (d).

Repeat a, b, c and d until you have 13 stitches on first needle, 25 stitches on second, 12 stitches on third. Knit plain for 4½ inches. First needle (e) knit 10 stitches—knit 2 together, knit 1. Second needle (f) knit 1, slip 1 knit 1, pass slipped stitch over, knit 19 stitches. Knit 2 together, knit 1. Third needle (g) knit 1, slip 1, knit 1, pass slipped stitch over, knit 9 stitches, knit 2 rows plain (h).

Repeat e, f, g and h five times, then narrow every other row until you have 5 stitches on your first needle, 9 stitches on your second needle and 4 stitches on your third needle. Knit the 5 stitches on your first needle on to your third. Your work is now all on 2 needles opposite each other. Break off yarn leaving 12-inch end. Thread into worsted needle and proceed to weave the front and back together as follows:

Pass worsted needle through first stitch * of front knitting needle as if knitting and slip stitch off—pass through second stitch as if purling—leave stitch on, pull thread through first stitch of back needle as if purling, slip stitch off, purl thread through second stitch of back needle as if knitting, leave stitch on. Repeat from * until all the stitches are off the needle.

Sock when finished should measure: Foot, from tip of heel to tip of toe, 11 inches.



Leg, from tip of heel to tip of leg, 14 inches.

Knitted Helmet No. 1.

One hank of yarn (1-4 lb.); one pair Red Cross needles No. 2.

The helmet is made in two parts, which afterwards are sewed together as shown in the illustration.

Front of Helmet: Cast on 48 stitches (11 inches), knit plain for 25 ribs (6 inches) and knit 2, purl 2 for 35 rows. On the next row the opening for the face is made as follows: Knit 2, purl 2, knit 2, purl 2, knit 2, knit and bind off loosely the next 28 stitches and purl 1, knit 2, purl 2, knit 2, purl 2. Run the stitches before the opening on a spare needle and on the stitches at other side of opening knit 2, purl 2 for 12 rows. The last row will end at the opening and at that point cast on 28 stitches to offset those bound off. Begin at the face opening of stitches on spare needle and knit 2, purl 2 for 12 rows. At the end of the 12th row continue all across to the end of other needle, when there should be 48 stitches on needle as at first. Knit 2, purl 2 for 24 rows.

Front and back of helmet. These are to be sewed together.

Top of Helmet: Knit 2, narrow (knitting 2 stitches together), knit 14, narrow, knit 14, narrow, knit 12. Purl the entire next row. On the 3d row knit 2, narrow, knit 13, narrow, knit 13, narrow, knit 11. Purl 4th row. On the 5th row knit 2, narrow, knit 12, narrow, knit 12, narrow, knit 10. Purl 6th row. Continue to narrow in the 3 places every plain knitted row with 1 stitch less between narrowings until 9 stitches are left.

Back of Helmet: Work in same manner as for front, but omit the face opening. Sew the stitches of upper edges together with joining stitch as shown in detail cut. Sew up the side seams, leaving the plain knitting at shoulders open.

Knitted Helmet No. 2.

(Same as No. 1, but knitted in one piece).

One hank of yarn (1-4 lb.); 4 Red Cross needles No. 2.

Cast on 56 stitches loosely. Knit plain for 8 inches for front piece, and leave on extra needle. Knit another piece to correspond for back. These pieces must be at least 9 inches wide. Slip the stitches of both pieces on to 3 needles, arranging for last 2 stitches of back piece to be on beginning of first needle, with 38 stitches of front piece added (making 40 on first needle.)

Divide rest of stitches on other 2 needles; 36-36.

Beginning with first needle, knit 2 purl 2 for 6 inches. Then on first needle knit 2, purl 2 for 18 stitches. Bind off 22 stitches for face opening. (Try to keep same arrangement of stitches on needles for further directions). Knit 2, purl 2 forward and back on remaining 90 stitches for 1 1-2 inches, always slipping first stitch. Cast on 22 stitches loosely to complete face opening and knit 2, purl 2 for 2 1-2 inches (adjust stitches by slipping 2 from end of third needle to first needle, making 42 on first needle).

Knit 1 round plain. Knit 2 stitches together, knit 11, knit 2 stitches together, knit 1. Repeat to end of round. Knit 4 rows plain. Then knit 2 stitches together, knit 9, knit 2 together, knit 1. Repeat to end of round. Knit 4 rows plain. Continue in this way, narrowing on every fifth round and reducing number of stitches between narrowed stitches by 2 (as 7, 5, 3, etc.) until you have 28 stitches left on needles. Divide on 2 needles, having 14 on first needle, and 14 on the other, and finish the same as for the toe of a sock.

Wristlet.

One-half hank of yarn (⅛ pound); 1 pair Red Cross needles No. 2

Cast on 48 stitches, knit 2 and purl 2 for 12 inches and sew up, leaving 2 inches open for thumb 2 inches from edge.

Wristlet No. 1.

Wristlets No. 2.

One-half hank of yarn (⅛ pound); 4 pair Red Cross needles No. 1.

Cast on 52 stitches on 3 needles; 16-16-20. Knit 2, purl 2 for 8 inches. To make opening for thumb knit 2, purl 2 to end of third needle, turn; knit and purl back to end of first needle, always slipping first stitch; turn. Continue knitting back and forth for 2 inches. From this point continue as at first for 4 inches for the hand. Bind off loosely and buttonhole thumb opening.

(Continued on page thirty-one.)

Helmet.

Dear Corner Cousins—Lately many of our cousins, those sick and well, have asked that each cousin write them a personal letter. All the letters to Aunt Nellie are to the Corner Cousins too, and they are personal letters. If any cousin wants to write to another cousin, and have it printed, they may do so, embodying it in their letter to Aunt Nellie as Tina Painter did. This was very thoughtful of you, Tina, and I am sure Lilla was glad to read your letter. I think it is always nice to write to the invalids and those who are sick. I am sure many of the cousins will write to Byron. Would it not be nice if each one would get a new cousin. Lilla has done well by the Corner; a sister and a friend have written this time. If every cousin would get two more what a big Corner we would have. Don't you think this would be nice?

AUNT NELLIE.

A City Cousin Writes to the Corner.

Dear Aunt Nellie: I do not live in the country, as most of the cousins do, but live in the city. In the summer, when there is no school, we go to our summer home in the country. We have 20 acres of land, but it is not entirely cleared. I have much fun out in the country, swimming nearly every day, hiking through the woods and taking long boat rides in our launch. One day last summer we took a ride in our launch to Oag Harbor, on Whidby island. After we had eaten lunch we took a ride in an automobile for about two hours. I thought at first that we were going to see Deception Pass, and I was very much disappointed when I heard that we were not going there. Many of the cousins say that they prefer the country to the city. I agree with them. I am always glad when the good old summer time is near. I am 12 years old and my birthday is on the 2d of March. I already have one friend who is my twin, but I would be pleased to hear from another boy or girl who is my twin. I also wish that some other girls, my age or older, would write to me. I am not going to school this year, because I have already graduated from grammar school and mother does not want me to go to high school yet. My oldest brother is 26. Two of my brothers are up near the North pole with the explorer, Steffanson; another has joined the naval reserves and is chief machinist's mate on a sub-chaser. One of my sisters has just had typhoid fever, but is nearly well now. Aunt Nellie, I also want the Corner to grow larger and better. Sunset is the most beautiful time of the day. The sun steals slowly down the horizon, coloring the soft gray and white clouds many beautiful colors, such as golden, crimson, purple and pink, which only nature can paint. Many times the sunset reminds me of the story of the Lord as a shepherd, the sun being the shepherd and the many small white clouds the sheep. At night it is sometimes much prettier when the full moon is the shepherd. Thanksgiving is one of the three most important celebrations of the year, Easter, Christmas and Thanksgiving. It is a time when all people should thank the Lord for all they have, for clothing, homes, daily bread and many, many other things. Many people think that it is a time when they should have many good things to eat and have a good time, but that is very wrong. I hope that the Corner will be much larger and better when I write again. —Thusnelda Kilian, 2106 Ninth ave., West., Seattle, Wash.

Grandfathers Stories.

Dear Aunt Nellie: I have been reading the cousins' letters in the Corner and think it would be nice to all write on the subjects that Aunt Nellie suggests so often. My subject that I am going to write on is "Grandfather's Story." Although my grandfather has been dead a good many years, his old war stories are not forgotten. There is one we shall always remember, which, I guess, he always kept in mind. He fought in the Civil war, and was registered in the Fifty-third Regiment, Illinois. He was captured by the south and put in Andersonville prison. They were very cruel to their prisoners, scarcely allowing them anything to eat or water to wash themselves. They were kept in prison for six months, but grandpa was wounded so they let him out sooner than they did the other prisoners. He was shot in the legs and the only medicine he had to put on the wound was ashes. When he was freed he went back to fight again, and was captured again and was put in Libby's prison for three months. I go to the Lincoln school. I am in the sixth grade.—Glyness Simenson, Box 102, Corfu, Wash.

A Letter From Emma.

Dear Aunt Nellie: I have not written for a long time, so I thought I would write now. My birthday was the 29th of November. I was 15 years old. Have I a twin? We had a week's vacation with Thanksgiving because our teacher went to the institute. We are going to move to Everson, so then we will have to go to the Everson school. I wish some of the cousins would write to me. Lucile Bowers wrote to me and I answered her letter, but she did not answer it.—Emma Brune, R. F. D. 2, Lynden, Wash.

Took the Cub Bear as a Mascot.

Dear Aunt Nellie: My subject is "On the Farm." We have 176 acres and 16 milch cows, three heifers and three calves. We have three horses, 75 chickens, two pigs and one dog, and three cats. We did have a little cub bear. He could climb trees and ladders. Once I went up a ladder and he followed me and I almost fell down. He would eat apples and pears and blackberries and cherries, and all sorts of fruit. He was about one foot high. My brother was drafted and when he got up to camp he phoned to me and we sent the little bear to him. Guess it is there yet. I milk one cow now, but in the spring I milk three or four cows. I like it when harvest time comes Then I can ride in on a load of hay and I like more to live on a farm than any where else. I can eat apples, go fishing, ride horseback or in a cart, or sleigh in winter away over the pasture fast or slow. We have a fireplace and I can hear the wind whistling outside the door and in summer I can pick the wild flowers and in autumn I can fly kites, pick the prettiest leaves. In town you are stuck in the house all the time and can not get a speck of fresh air. We used to live in town and I did not like it a bit. Oh, I was so glad when we moved up on a ranch at Menlo. We lived up on that place for a year or two then we moved on another place joining that one. I like to go to school. I am 9 years old. —Rosa May Millam, Menlo, Wash.

Frances Sends Some Riddles.

Dear Aunt Nellie: It has been so long a time since I wrote to you that I thought I would write and give some riddles. I knew all the answers to the other riddles that the cousins put in and will give some and see if they can guess them. Here is one. I went to the woods and got it. When I got it I couldn't find it. The more I looked for it the less I liked it. I brought it home in my hand because I couldn't find it. What is it? Upon the hill there is a green house, in that green house there is a white house, in that white house there is a pink house, in that pink house there is whole lot of little black negroes. What is it? What is it a wagon has that it doesn't need but never goes without? Black upon black, and black upon brown, three legs up and six legs down. What is it? Big at the bottom, little at the top, the thing in the middle goes flippity flop. What is it? Why is a young lady like a door knob?—Frances McCauley, Route 1, Box 35, Dayton, Wash.

Basil Is a Busy Boy.

Dear Aunt Nellie: My subject is "What I Do on the Farm." I get up about 6 o'clock in the morning eat my breakfast, milk three cows, clean the barn, feed the pigs, put in hay for the cows, water the horses, then eat my dinner, sack potatoes,cut the wood, get in the cows, milk two of them, eat my supper and then go to bed about 7:30 o'clock. I have a pig and a calf of my own. I am a member of the boys' and girls' pig club. I have my second pig. I made $8 on my first pig. With the money I bought my calf. We have 16 milch cows. I have one brother. His name is Bruce. He was called in the draft. He went to Camp Lewis and then to New York, where he was made corporal. I have a sister. She is writing to the Children's Corner. We had a little cub bear. He could climb a tree and eat the apples and pears, but my brother took him with him as a mascot. I hated to see him go.—Basil Millam, Menlo, Wash.

Brother Beats Violet at Marbles.

Dear Aunt Nellie: I have never seen a letter from College Place so will write one. I go to school here and I am in the third grade. Miss Woods is my teacher. How many of the cousins sold Red Cross stamps this year? I sold some last evening and will try to sell more today. Our teacher got them for us to sell. I was nine years old last August 28. I have blue eyes and yellow hair. I love to play with dolls. I can play marbles, too, with my brother, Wilbur, but he beats me most of the time. He is 12 years old the 12th of next May. He drove the derrick in harvest this summer and made almost $100. He bought a $50 Liberty bond with his money. The weather is fine here now and we can play out doors all day, when we are not in school. I will close with love for Aunt Nellie and all the cousins. I would like to hear from some of them.—Violet Catherine Morley, College Place, Wash.

Nibbs and Nero Are Pet Dogs.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am going to school and I am 10 years old. My birthday is in August. I am in the fourth grade. We live on a 316-acre farm. We have two farms. We have a 200-acre farm. We do not live on it, but live on the farm that has 316 acres. I have six sisters and three brothers. I have a father and mother. We have 45 cows and 13 horses. We have a pony. The pony is sorrel. Her name is Nellie. We drive her in the buggy. We have two cars; one is for my brothers and sisters. Papa and mama got the other one. We have two dogs and their names are Nibbs and Nero. We have five cats. We only have one cat named, and it is Tige. We have 50 chickens. We have 220 sheep. I am the baby of the family.—Ethel Lexie Johnson, R. F. D., Box 26, Friday Harbor, Wash.

Myrtle Is a New Cousin.

Dear Aunt Nellie: May I join your Corner? I am 12 years old. My birthday is the 29th of May. I hope I have a twin. If I have I hope they will write to me. I go to school and I am in the sixth grade. My teacher's name is Miss Amzel Philips. There are three rooms in our schoolhouse that they have classes in and one for domestic science and the boys have manual training in the basement. We have a football team and a basket ball team. I would like for Mary King to write to me about her Red Cross club if she would. My letter is getting long so I will hope to see this in print. I would like for all the cousins to write to me. I will try to answer all their letters.—Myrtle Ham, Tyler, Wash.

Gala Is a Corner Cousin.

Dear Aunt Nellie: This is the first time I have written to the Corner. I hope that every member enjoys reading the letters as well as I do. May I join the Corner? If so, please let me know. I would like to see my letter in print. I have light hair and blue eyes. I am nine years old and was born the 30th of September. Have I a twin? I am in the fourth grade. My teacher's name is Mrs. Skidmore. She is very good to me. We have three days vacation this month. I help my mamma vacation times. I have three cats and one dog. My dog's name is Prince. He is a white dog. Next time I write I will write a longer letter. I would this time but I have to go to bed.—Gala Peed, R. F. D. 1, Box 37, Pullman, Wash.

Glad to Have Effie Join Us.

Dear Aunt Nellie: I have been reading the children's letters in the Corner. I thought that I would write and ask if I may join. I am 11 years old and weigh 90 pounds. I'm in the sixth grade. I expect to stay there next term, as my two nieces and I had the whooping cough. My youngest nieces had it so badly that we expected to see her go any time, but she pulled through it. I'll have to go to school Monday, as I have stayed out six weeks. My brother's birthday was the 2d of December. I have four brothers and six sisters, but two of my sisters are dead and one of my brothers is, too. It snowed the day of Thanksgiving and then today it is a nice snow. I like to play in it.—Effie Elva Brown, Monitor, Wash.

Just Two in Nettie's Class.

Dear Aunt Nellie: This is the second time I have written to the Corner. I saw a girl's name in the Corner that was the same as mine. I was going to write to her but lost her address. I go to No. 1 school and am in the seventh grade. My teacher's name is Miss D. Nero. I like her very much. There are only two in my class, Anna Bergman and myself. There are 23 pupils going to No. 1 school. I am 12 years old. I have dark hair and blue eyes. I weigh 110 pounds. My birthday is on the 13th day of July. If I have a twin in the Corner I wish her to please write to me. I have a brother at American Lake and one that I think will be drawn next time.—Nettie Johnson, R. F. D. 1, Box 26, Friday Harbor, Wash.

Skate on a Pond in Winter.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. Our nearest city is Oak Harbor. There are many buildings in the city. The names of some are: stores, a bank, a drug store, a blacksmith shop, a Ford garage, a box factory, a graham mill, one high school, one grade school and many other buildings and offices. Our schoolhouse is about one-half of a mile from the beach and about one-half mile from a pond where we can go skating in the winter. I would like to correspond with any girl of my age. I am 14 years old. My birthday is the 26th of August. Have I a twin?—Albertha Capaam, Oak Harbor, Wash.

Youngest Brother Is a Soldier.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I do not think it shall be the last time. I enjoy myself reading the letters that are written to you. I am 12 years old. I will be 13 years of age February 17. My hair is dark brown and my eyes are hazel. Have I a twin to correspond with? I would be very glad to see my letter in print. We live on a 160-acre farm. I have two brothers. My youngest brother is a soldier. He is in Camp Lewis. I have six sisters. We live a short distance from the beach in the summer time, and we go out boat riding.—Marie Hazel Buttman, Box 31, Oak Harbor, Wash.

Arthur Is in the Fourth Grade.

Dear Aunt Nellie: This is the first time that I have written. We have a new pony. That makes the seventh horse that we have. We have 24 chickens and are getting four eggs a day. I am 9 years old and will be 10 in March. I am in the fourth grade. My name is Arthur Davis. My teacher's name is J. H. Adams. He is a tall red-headed man. He is about 6 feet tall.—Arthur Davis, Davenport, Wash.

Bertha Wants a Twin.

Dear Aunt Nellie: This is the first time I have ever written to the Corner. I am 12 years of age. My birthday is September 27, Have I a twin? We live in the country on a farm about 40 acres. Most of it is cleir. If I have a twin I would like her to write to me. I will answer her letter.—Bertha Millenaar, R. R. 2, Box 29, Oak Harbor, Wash.

THE BARRIER

(Continued from page twenty-two.)

great, roistering, brown man would fold her to himself—she would yield to him every inch of her palpitant, passionate body. The thought drove the lover frantic, and he felt that madness lay that way if he dwelt on such fancies for long. Of a sudden he realized all that she meant to him, and cursed himself anew.

While he had the power to possess her he had dallied and hesitated, but now that he had no voice in it, now that she was irretrievably beyond his reach, he vowed to snatch her and hold her against the world.

As he grew calmer his reason began to dissect the scene that had taken place in the store, and he wondered whether she had been lying to him, after all. No doubt she had been engaged to the Frenchman, and had always planned to wed Poleon, for that was not out of reason; she might even have set out mischievously to amuse herself with him, but at the recollection of those rapturous hours they had spent together, he declared aloud that she had loved him, and him only. Every instinct in him shouted that she loved him, in spite of her cruel protestations.

All that afternoon he stayed locked in his room, and during those solitary hours he came to know his own soul. He saw what life meant: what part love plays in it, how dwarfed and withered all things are when pitted against it.

A man came with his supper, but he called to him to be gone. The night settled slowly, and with the darkness came such a feeling of despair and lonesomeness that Burrell lighted every lamp and candle in the place to dispel, in some measure, the gloom that had fallen upon him. There are those who believe that in passing from daylight to darkness a subtle transition occurs akin to the change from positive to negative in an electrical current, and that this intangible, untraceable atmospheric influence exerts a definite, psychical effect upon men and their modes of thought. Be this as it may, it is certain that as the night grew darker the lieutenant's mood changed. He lost his fierce anger at the girl, and reasoned that he owed it to her to set himself right in her eyes; that in all justice to her he ought to prove his own sincerity, and assure her that whatever her own state of mind had been, she wronged him when she said he had made sport of her for his own pleasure. She might then dismiss him and proceed with her marriage, but first she must know this much of the truth at least. So he argued, insensible to the sophistry of his reasoning, which was in reality impelled by the hunger to see her and hear her voice again. He snatched his hat and bolted out, almost running in his eagerness.

An up-river steamboat was just landing as he neared the trading post—a freighter, as he noted by her lights. In the glare at the river-bank he saw Poleon and the trader, who had evidently returned from Lee's Creek, and without accosting them he hurried on to the store. Peering in from the darkness, he saw Alluna; no doubt Necia was alone in the house behind. So he stumbled around to the back to find the window of her room aglow behind its curtain, and, receiving no answer to his knock, he entered, for it was customary at Gale's to waive ceremony. Inside the big room he paused, then stepped swiftly across and rapped at her door falling back a pace as she came out.

Instead of speaking at once, as he had planned, to prevent her escaping, he was struck speechless, for the vision that met his eyes was that which he had seen one blithe spring morning three months before; but tonight there was no shawl to conceal her sweetly rounded neck and shoulders, whose whiteness was startling against the black of the ballroom gown. The slim gold chain hung around her neck and her hair was piled high, as before. He noted every smallest detail as she stood there waiting for him to speak, forgetful of everything else.

She had put on the gown again to see if, perchance, there might be some mark of her blood or breed that had escaped her previous scrutiny, and, as there was no one to observe her, she had attired herself slowly, absorbed in her whimsy. Her wistful beauty dazed the young man and robbed him of the words he had rehearsed, but as she made to flee from him, with a pitiful gesture, toward her room, the fear of losing her aroused him and spurred his wit.

"Don't go away! I have something I

(Continued on page thirty-one.)

News for Breeders

During the Pacific International stock show Howard & Royston of Parma, Idaho, sold Lady Perfection, one of their champion herd of Poland Chinas, to Beebe & Banks of Portland, Ore., for $300. This is the top price ever paid for a western bred hog, so far as the Farmer is able to learn, and indicates better conditions and bright prospects for the hog business as well as the high quality of the animal sold.

Friday evening, November 23, Hereford breeders met in Portland and organized the Northwest Hereford Breeders' association, with C. S. McGee of the Portland Union stock yards as secretary. At the sale of Herefords at the Pacific International stock show grounds the next day a large number of breeders took membership, so the association is already in a thriving, healthy condition.

At the J. W. Fruits sale of Duroc Jerseys at Brooks, Ore., November 15, the junior champion sow at the state fair went to Frank Wheeler of Brooks for $80, about half her worth. Henry Zorn of Aurora, Ore., got the second and third prize sows at bargains and prices generally were not such as the high-class stock consigned should have brought. The sale was advertised but a short time and feed and labor conditions also affected prices.

Edward Coles of Haines, Ore., won the fine trophy silver cup offered by the Oregon Farmer for the champion carload of fat steers at the Pacific International. This makes the sixth time he has won grand championship on the steers he exhibited, so that it has become a habit with him. Mr. Coles sometimes buys, but is a breeder as well as a feeder. His steers are always high grade or pure bred Herefords or Shorthorns and he claims as much for good blood as for the art of feeding, of which he is such a master.

Wayne Dinsmore, secretary of the Percheron Society of America, has a wonderful motion picture film about completed. It tells the story of a lady whose husband was in the war and she decided to go into Percheron breeding. She visits the finest studs of Percherons in the world, sees the greatest mares and sires and Percheron geldings at work. Mr. Dinsmore will attend farmers' week at the Oregon Agricultural college and has promised to put on the film as a moving picture show.

George Connor of Albany, Ore., began official testing of his Jersey herd last spring, and now has 14 head on test. While Mr. Connor has not been situated to feed to the best advantage for milk production, his cows are generally doing very well, and he is fairly well satisfied with the records they are making. Mr. Connor has Nancy V. Figgis and Lily Gem Figgis, two good cows from the Charles Miller herd. Lily Gem has dropped nearly all heifers and five of her daughters are now in milk, so that Mr. Connor has almost a line bred herd on the female side. He is now using a son of Oxford You'll Do Jr. as herd sire. Some of his daughters are on test and are making good records.

Clyde Claggett of Salem, Ore., began his purebred pig experience last March, when he purchased a bred Chester White gilt from Ed Schoel for $40. By August Mr. Claggett had sold pigs to the amount of $77 and had the sow and two pigs left. The sow has eaten some waste, that cost nothing, besides about $25 worth of real feed. She will farrow again about the middle of January. Mr. Claggett feels that if he can clear money like this when he sells pigs at low prices there is money in purebred hogs. He now has a very fine boar, purchased from Archie Conley.

J. B. Stump and son of Monmouth, Ore., report themselves still well satisfied with what their registered Jerseys are doing on high priced feed. For the month of September 14 cows yielded them a check for cream and some whole milk sold for $247. Four of them were fresh in February, and, with the exception of four the others were fresh early in the spring. The principal feed has been oats and vetch silage and a little oil meal.

Mr. Stump also reports 13 horses sold during the year. This includes three pure bred Percheron mares to the O. A. C. In a short time all the college foundation stock will be Percherons from Mr. Stump's Fair Acres Farm.

Lathrop Brothers of Grants Pass, Ore., in the spring of 1914 purchased nine registered Ayrshire cows and a herd sire from Walter Domes of McCoy, Ore. Among them were Pauline Sebastian and Sadie Netherland, two fine show cows. Melba, another show cow, is now in the herd. Most of the calves have been heifers, and these young men, who, with their mother, are running a retail milk business at Grants Pass, now have 35 head, 32 of which are females. Lovelocks, one of the good cows, has milked 69 pounds daily for a month. In fact, the general output has been quite satisfactory, and they are well pleased with the Ayrshire breed and expect to go on and enlarge the herd. H. A.

Grand Champion Fat Steer.

The steer, California Manuel, shown above is the grand champion fat steer of the Pacific International Stock Show at Portland, Ore., November 18-24. He was shown by the University of California, and won in the strongest kind of competition. He is so perfect and so promising that the university held him over with the expectation of showing him next winter at the Chicago International. H. A.

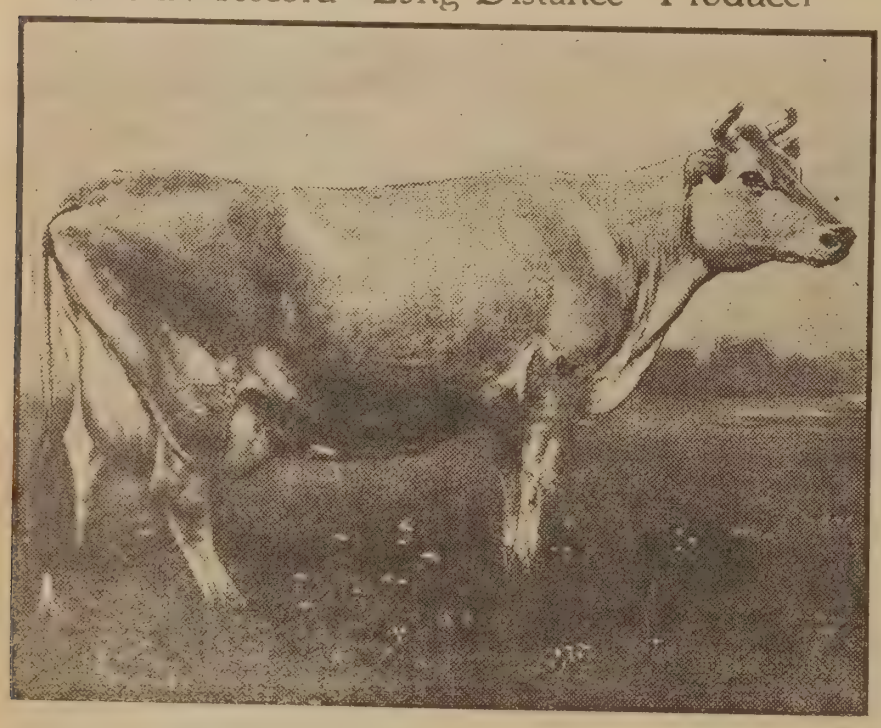
Favor Irrigation District.

The returns from the Quilcene irrigation district No. 1 in Jefferson county election show a unanimous vote in favor of creating the district. This project includes about 1000 acres of land which will be greatly improved for agricultural purposes by irrigation.

Bargain Offer.

To The Washington Farmer: I am enclosing $1.00 (one dollar) for this bargain offer if I am not too late. I will say that I have read the Twice-a-Week for four years and I am satisfied with it. I always enjoy reading The Washington Farmer.

R. L. SHAW.
Curlew, Wash.



P. J. Ackerson, C. S. Morse and Mark Meyer were elected directors. These men expect to have water on the land in time to benefit next year's crop. County Agent McWhorter has been assisting the farmers in forming the new irrigation district.

Dairying in Cowlitz.

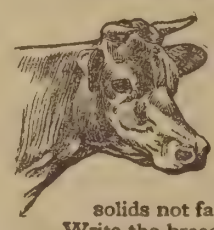
County Agriculturist Keyes of Cowlitz county believes that ultimately dairying will become one of the chief industries of that county. "Heretofore the production of hay has been one of the chief industries among the farmers here," said he, "but there are many dairymen and the soil, climate and geographical situation favor this business. The soil here is rich and productive and the important problem of feed production is answered more easily here than in some of the greatest dairy sections."

Mr. Keyes is a graduate of the State College of Washington, where he specialized in animal husbandry and agronomy. Last year he taught in the Kelso schools and when the emergency called for a county agent he was selected. His work appears to be successful there.

World's Record "Long Distance" Producer

Having just completed her seventh official record under Register of Merit rules, Sophie 19th of Hood Farm not only establishes a record for the Jersey breed, but for all breeds when cumulative production is taken into consideration.

In her thirteenth year she has made 15,948 pounds of milk and 1059 pounds of butter which, added to her six previous records, gives her a total production in her seven lactations of 91,869 pounds of milk, or over 45 tons, and 6600 pounds of butter, or more than three and a quarter tons. She became champion cow of the Jersey breed on completing her fifth lactation, when she made 17,557 pounds of milk and 999.1 pounds of fat. This record has never yet been equaled by any other cow of the breed.



Besides being a champion herself, she has produced champions. One of her sons, Pogis 99th of Hood Farm, is the sire of 26 officially tested daughters, whose average production for one year is 620 pounds of butter. Two of these cows are champions in the 3-year-old and 4-year-old classes. At this age they have even surpassed the production of their granddam, Sophie 19th.

The following table gives Sophie's great records in the order made:

Milk	Fat	80% Butter	Age	
		Lbs.	Yrs.	Mos.
7050.2	395.9	494.8	2	2
9924.8	570.8	713.5	3	8
14373.2	854.8	1068.5	4	11
15099.4	931.9	1164.8	6	7
17557.8	999.1	1248.8	7	11
11915.4	680.5	850.6	9	7
15948.2	847.8	1059.8	11	9
91869.0	5280.8	6600.8		

Sophie 19th is still in good physical condition and she may yet contribute other records to supplement the great work that she has already done as standard bearer of the Jersey breed.

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.
C. E. LONG, Buhl, Idaho.

724 Pounds Butter

and 11,076 pounds milk is the record the dam of a bull calf dropped Sept. 1, 1917. The sire, Dominus, is out of an 817-lb. cow and sired by a bull out of an 853-lb. cow. PRICE $125 for quick sale.

J. B. STUMP & SON, Monmouth, Ore.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM. Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Goldon Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.

If in need of a good stallion weighing from 1800 to 2200 pounds, come direct to my stables and see them or write for description and terms to

WM. T. TRACY, Kennewick, Wash.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Dec. 17.—Mild weather accompanied by rural notices of larger consignments had a bearish effect today on corn. The close was unsettled but ⅜ to ⅝c net lower with January 120⅞ to 121 and May 118⅞. Oats also lost ⅜c to ⅝c. Provisions scored an advance of 25 cents to 70 cents.

Growing likelihood that the near future would witness a substantial accumulation of stocks dominated the corn market throughout the day. Arrivals over Sunday were liberal and complaints of car scarcity had noticeably diminished. Besides the quality of receipts showed steady improvement, the embargo on shipments eastward from Chicago remained unmodified and the visible supply total went up to a fair extent. Under such circumstances declines set in from the outset, no important rally took place, and what demand there was came almost entirely from local industries.

Oats, like corn, eased down as a result chiefly of better operating conditions for the railroads. Shutting off of exports inquiry, however, had an evident further depressing influence. Leading commission houses were conspicuous on the selling side.

Higher quotations on hogs gave strength to provisions. The fact, though, that exports for the week were much smaller than last year tended somewhat to check the upward course of the market.

Cash Quotations.

CHICAGO, Dec. 17.—Corn—No. 2 and 3, yellow, nominal; No. 4 yellow, $1.40@1.60.

Oats—No. 3 white, 75½@76½; standard, 76⅝@76¾c.

Rye—$1.82@1.83.

Bran—$40@40.50.

Seattle Wheat.

SEATTLE, Wash., Dec. 15.—Confusion between the state and federal grading and dockage rules that has prevailed all through the season was in a large measure cleared up at the conference this week between representative grain dealers and George Livingston, acting in charge of the federal bureau of markets.

The discussions centered principally around smutty wheat. Mr. Livingston said that 65c per ton and 1 per cent allowed by the state as dockage was a matter with which the federal department had nothing to do, and intimated that it would not be recognized. He declared that the government would take no part in monetary dockage or discounts.

It was brought out for the benefit of Mr. Livingston that the grain trade of the north Coast territory was very different from that of any other section. The "A" plan which provides that inspectors shall scour, clean and dock is now in force, and Puget sound dealers prefer option or rule "B," where smutty wheat is thrown on the market on sample, this putting the price up to buyer and seller in each instance, or for adjustment on the Merchants' exchange. There was a division of sentiment, however, between millers and other grain buyers as to rule "B," objectors claiming that the change would cause more thouble than is now being experienced.

There was considerable argument and discussion from the floor as to the fundamental desire of millers, for the good of all concerned, for a uniform grading law. It is feared that on commercial wheat, if the state dockage is allowed, Minneapolis and other eastern buyers will decline to confirm sales with such conditions and serious disputes and hindrances to the easy flow of grain when peace is restored will follow.

Mr. Livingston complimented Washington grain men on their cooperation with the government's plan for grading and conservation, but made it clear that grades are now being fixed for peace as well as war conditions.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., Dec. 17.—Hogs—Receipts, 7000; market 15 to 25c lower. Heavy, $15.90@16.20; mixed, $16@16.10; light, $15.85@16.20; pigs, $10@16.50; bulk of sales, $16@16.10.

Cattle—Receipts, 7800; market steady to lower. Native steers, $9@13; cows and heifers, $6.50@10; western steers, $7.50@11.25; Texas steers, $7@10.50; cows and heifers, $6@9; canners, $5.25@6; stockers and feeders, $6@11; calves, $9.50@12.50; bulls, stags, etc., $6@8.50.

Sheep—Receipts, 2000; market steady to stronger. Yearlings, $11.50@13.25; wethers, $11@12.50; ewes, $9.50@11.25; lambs, $14.50@16.25.

Sheep—Receipts, none; market steady. Prime lambs, $13.25@14; good lambs, $12@12.75; prime yearlings, $11.50@12.25; prime wethers, $11.25@12; best mutton ewes, $8@10.

Portland Wheat.

PORTLAND, Ore., Dec. 15.— Steps are being taken to increase greatly the manufacture of barley flour in the northwest for bakers' use. In California, according to advices to local dealers, about half of the trading in choice barley now is for millers' account. This is given as the reason for the greater strength of the barley market, which in turn is afefcting the oats market. The demand for the feed grains has not been checked by the advance. Millfeed is also in stronger demand because of its relative cheapness. Bran and shorts list prices are not changed by millers, but feed is bringing more money in the outside market, as shown by the sale of two cars of December bran at the merchants' exchange at the close of the week at $35.50. The best rolled barley and rolled oats are now worth $62.

Hay prices are on a strong basis and dealers do not look for any declines during the winter.

Decline in Hides.

SEATTLE, Wash., Dec. 15.—Hide prices beginning Monday will decline 2@3 per cent. Buyers of this city were notified today on urgent telegraphic advices from their eastern connections, that the hide situation of the United States was in the midst of a startling slump.

The market has been unsettled for some time, but dealers expected a rally in view of the evident need of the allies for army footwear. The repudiation of contracts by the present tentative government of Russia, however, resulted in widespread cancellation by American manufacturers of orders for that country, and thousands of case lots of shoes will be held in the United States and thrown as a surplus on the American market. Radical reformation of the prices of spring footwear are predicted by hide dealers.

Seattle Market.

SEATTLE, Wash., Dec. 15.—Jobbers are pushing the sale of potatoes for the week end, with the idea in mind of assisting growers to dispose of their crop at as early a date as possible. It is pointed out that selling levels at $1.25@1.35 for Puget Sound and $1.50@1.60 for Yakima gems, all run to No. 1, is the minimum price for this season and is now within the reach of all consumers.

The apple trade is expected to be brisk all season. Stocks of fancy and extra fancy on Western avenue will hold out until February, when local buyers must again go on the market of eastern Washington for their supply, a much earlier date than usual. The demand for oranges persists, notwithstanding the high costs, as there is a fixed percentage of the trade that can be depended upon to absorb this fruit even at extremely loft prices, but the bulk of the buying is switching slowly to apples, and it is expected that the movement will be unusually heavy. Jumple packs held in warm storage must be cleaned up before brisk selling of fancy and extra fancy sets in, but the outlook is bright because of the widening distance between apples and oranges as competitors for the mid-winter popularity. The best grade of navel oranges is now within 50 cents of Florida grapefruit, and the citrus division is destined to play an unusual part in the fruit trade this winter.

The fresh ranch egg market is weak and wholly unsettled. There are sales today at both 53 and 54 cents, with a strong outlook for a more serious break next week.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle;

Eggs—Local, 47@48c per dozen; pullets, 40c dozen.

Poultry—Live hens, fat, over 4 lbs, 21@22c per lb.; 4 lbs. and under, 18@19c; old roosters, 15c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 15c per lb.; spring chickens, life, fat, 20c per lb.; hens and young tom turkeys, dressed 28@29c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 16@18c per lb.; heavy, 12@13c per lb.

Veal—Fancy, light, 14@16c per lb.; heavy, 9@13c per lb.

Hides—Salted, 16c per lb.; flint-dry hides, 30@31c per lb.; salt kip, 16c per lb.; green hides, 13c per lb.; green calf, 25c per lb.; dry calf (under 5 lbs.), 34c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 10c per lb.; dry full wool sheep pelts, 42@46c per lb.; salt bulls, 13c per lb.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $1.50 cwt.; sweet potatoes, $4.25.

Apples—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.85@$2.25; Winter Bananas, $2 box; Jonathans, $1.25@1.60 box; Wageners, $1.25 box; Rome Beauties, $1.25@1.60 box; Spitzenburgs, $2 box; King Davids, $1.25@1.35 box; Grimes Golden, $1.35@1.65 box; Staymen Winesaps, $1.75@2 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 45c lb; Gold Leaf, 49c lb; Better Butter, 45c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss 38c lb; Young Americas, 27c lb.

Eggs—White filler, guaranteed, $13 case; selected storage, $12.

Portland Market.

PORTLAND, Ore., Dec. 15.—All signs point to a firm Christmas turkey market at about 30 cents wholesale. There is a good market right now for live poultry of all kinds. Fat live geese have sold up to 18 cents, the highest priece ever known here.

Country dressed pork has been weak, because of the reduced call from the Sound, but veal is still in good demand.

A broader inquiry for eggs has checked the decline in ranch prices, but storage stock is still easy. Receipts of fresh eggs increasing slowly, but are moved without trouble.

There is a firmer feeling in the potato market, but buying prices have not been advanced, shippers paying $1.20@1.25 for fancy and $1 to $1.10 for ordinary stock. Sales for shipment armade with less difficulty, though cars continued hard to get. The trade believes the improvement is only temporary, due to the smaller amount of stock rolling. In view of the immense quantity of potatoes still unconsigned, they look for a much lower market during the late winter months.

The butter market is very firm with all grades scarce. There is a food administration campaign on to increase the use of cheese, but stocks in storage are so heavy that it has not helped prices.

The hide market is very weak and another drop in prices is looked for soon. Green and salted hides are quoted at 16 cents and calfskins at 22 cents.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $57.50 per ton.

Millstuffs—Bran, $33 per ton; shorts, $36.

Barley—No. 1 feed, $55; brewing, $56.25; rolled, $61@62.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24; grain $24.

Eggs—Oregon ranch, case counts, 48c per dozen; candled, 50@55c.

Poultry—Hens, 18@20c; ducks, 20c; turkeys, live, 20@22c; geese, 14@18c.

Butter—City creamery, prints, 45@49c per pound; cubes, extras, 45½c.

Cheese — Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 15 1-2@16c; pork, 17 1-2@18c.

Hops—1916, 14@15c; 1917 crop, 16@20c.

Potatoes—Oregon, buying price, $1@1.25 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 55@60c.

Beans—Buying prices: Oregon white, 9@9 1-2c; colored, 8@9c.

Butter and Eggs.

PORTLAND, Ore., Dec. 15.—Butter—Prints, extras, 46@49c; cubes, extras, 45½c; prime firsts, 45c; dairy, 32½c.

Butter fat, Portland delivery, No. 1 sour cream, 52@53c.

SAN FRANCISCO, Dec. 15.—Butter, fresh extra, 46c.

Eggs—Fresh extras, 55c; fresh extra pullets, 49c.

CHICAGO, Dec. 15.—Butter, higher; creamery, 38@49c.

Eggs, higher; receipts, 3365 cases. Firsts, 51@52½c; ordinary firsts, 44@48c; at mark, cases included, 44@50c.

THE BARRIER

(Continued from page twenty-seven.)

must tell you. I've thought it over, and you've got to listen, Necia."

"I am listening," she answered, very quietly.

"Understand me, I'm not whining and I'm willing to take my medicine. I couldn't talk or think very straight this afternoon, but you were wrong."

"Yes, I know now, I was wrong. It was most unlady-like, wasn't it? But you see, I am only a little savage."

"I don't mean that; I mean you were wrong when you said I had played with you. In the sight of God, I swear you were mistaken. You have made me love you, Necia. Can't you see?"

She made no sign.

"If you can't, I owe it to you and to myself to set you right. I am not ashamed to acknowledge my love, and even when you are married to Poleon I want you to know that I shall love you always."

Even yet she made no sign. Was he not merely repeating the same empty words with which he had so often beguiled her? There was no word of marriage; he still considered her unworthy, beneath him. The pain of it caused the girl to wince suddenly, and her sensitive face flinched, seeing which he broke out:

"You do love me, Necia—you do. I see it in your eyes!" And he started toward her with open arms, but she shrank away from him.

"No, no! Don't touch me!" she almost screamed.

"My dear one," he breathed, "you must listen to me. You have nothing to fear, for I love you—love you—love you! You were made for me! You'll be my wife. Yes; you'll be married on Sunday, but to me, not to Poleon or any other man!"

Did she hear aright? Was he, her soldier lover, asking her, the Indian girl——?

"You do love me, don't you?" he pleaded. But still she could not speak, and he tried to read the answer in her swimming eyes.

"You mean—you want to—marry me?" she murmured, at last, hesitating shyly at the word that had come to play so momentous a part in her little world.

"Indeed I do!" he declared with emphasis. "In spite of everything, anything. Nothing else matters."

"Nothing?"

"Nothing! I'll quit the army. I'll give up the service, and my people, too. I'll put everything back of me, and we'll start out anew—just you and I."

"Wait a moment," she said, retreating a little from his eager, outstretched arms. "Why do you need to do all that?"

"Never mind why, it's as good as done. You wouldn't understand—"

"But I think I do understand now. Do I really mean all that to you?"

"Yes, and more!"

"Would you really have to give up your family—your sister? Would those people you are so proud of and who are so proud of you—would they cut you off?"

"There is no question of cutting off. I have no inheritance coming. I don't want any. I don't want anything except you, dear."

"Won't you tell me?" she persisted. "You see, I am dull at these things."

"Well, what if they do?" he conceded. "You more than make it up to me—you outweigh a thousand families.'

"And would your marriage to a—a—to me destroy your army career?"

"Well, it will really be much easier for both of us if I resign from the service," he finally admitted. "In fact, I've decided to do so at once."

"No, no! You mustn't do that. Tonight you think I am worth the price, but a day will come—"

He leaned forward and caught her hands in his.

"—Meade, I can't let you do it."

"I'd like to see you help yourself," he said, banteringly.

"I can and I will. You must not marry me, Meade—it's not right—it can't be." She suddenly realized what this renunciation would mean, and began to shiver. To think of losing him now, after he had come to her freely—it would be very hard! But to her, too, there had come the revelation that love means sacrifice, and she knew now that she loved her soldier too well to let her shadow darken his bright future, too well to ruin him.

"It will be over before you know it," she heard him saying, in a lame attempt at levity. "Father Barnum is an expert, and the operation won't occupy him 10 minutes."

"Meade, you must listen to me now," she said, so earnestly that it sobered him. "Do you think a girl could be happy if she knew a good man had spoiled his life for her? I would rather die now than let you do such a thing. I couldn't bear to see myself a drag on you. Oh, I know it would be wonderful, this happiness of ours, for a time, and then—" She was finding it more and more dificult to continue. "A prisoner grows to hate the chains that bind him—when that day came for you, I should hate myself. No, no! Believe me, it can't be. You're not of my people, and I'm not of yours."

At that moment they heard the voices of the trader and his squaw outside, approaching the house. The girl's breath caught in her throat, she flung herself recklessly, upon her lover's breast and threw her arms around his neck in an agony of farewell.

"Meade! Meade! my soldier!" she sobbed, "Kiss me goodby for the last time!"

"No," he said, roughly.

But she dragged his face down to her burning lips.

"Now you must go," she said, tearing herself away, "and for my sake, don't see me again."

"I will! I will! I'll ask your father for you tonight."

"No, no! Don't, please don't! Wait til—till tomorrow—till I say the word! Promise me! On your love, promise!"

Her eyes held such a painful entreaty that he nodded acquiescence as the door opened and her father and Alluna entered.

WANTED—TO RENT, IN YAKIMA COUNty or Benton, 160 acres or more, on share. T. T. Taylor, Rainier, Wn.

GIANT POWDERS
Lift them out

It will pay you to test Giant Farm Powders in competition with any other stumping powder.

In the last year more than 2,000,000 pounds of these Giant Powders were used for stump blasting in Washington and Oregon alone. The users included farmers in every county in both states, the largest lumber and development companies, and the United States Government. They use the Giant brands because they have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

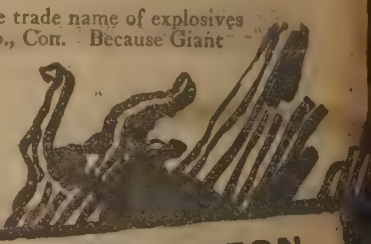
always give satisfaction and do their work at the lowest possible cost and in the most thorough manner.

In the Pacific Coast states the farmers require explosives that will disrupt, crack, split and heave the stumps and at the same time lift and loosen the roots for easy handling. Giant Farm Powders do this because they are made especially to suit western conditions. Because of their wider-spread force, they remove the stumps more economically than powders or dynamites that merely shatter and pulverize.

Test one case. Compare it with any explosive that you have ever used for stump blasting. After you have blasted a dozen stumps you will understand why farmers who have once used them always continue to use the Giant Farm Powders. Fill out and mail the coupon at the right, and we shall arrange with our nearest distributor to supply you promptly at the lowest market price.

There are two Giant Farm Powders—Giant Stumping Powder, used for blasting in wet soil, and Eureka Stumping Powder (which costs a little less) for blasting in dry soil. Both resist cold to a remarkable extent, seven days' exposure to a temperature of 32 degrees failing to freeze them. Ask your dealer for these brands.

THE GIANT POWDER CO., CONSOLIDATED HOME OFFICE: SAN FRANCISCO ESTABLISHED 1866



"Everything for Blasting"

BRANCH OFFICES: Seattle, Spokane, Portland, Salt Lake City, Denver

Have You Our Stump Book?

It is the most helpful and interesting book ever issued on Stump Blasting. It tells and shows how to save money and make land-clearing easier. It is written by Western men, from the Western viewpoint, and is full of pictures showing latest methods of blasting. Mark and mail the coupon and get it free. Other books—on boulder blasting, tree planting, ditching and subsoiling with explosives—also free on request. Mail the coupon *now*, before you lay this aside.

Warning. Giant Powder is the trade name of explosives manufactured by the Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine, made only by the Giant Powder Co., Con. If your dealer has only ordinary dynamite, write us and we will see that you get the genuine.

Peas Prove Their Value in Three Directions

Figures Show Land Improvement, Profit From Marketing and From Hogs as By-Product

By J. R. SHINN, Spokane County Agent

During the last few years I have been interested in seeing what the results might be on the farms in Spokane county, where pea growing has been carried on extensively among the farmers. There has been one great difficulty in getting proper tests made of the benefits of the pea crop upon the soil, owing to the fact that farmers have generally found pea growing so remunerative that instead of planting a grain crop on the land following peas they have followed peas with peas.

We have therefore been anxiously awaiting an opportunity to test the yield of grain crops following peas, especially when undertaken in a large way. Previous to this year some very outstanding results in favor of inoculated pea land over land previously summer fallowed or on which wheat had grown before, have been secured.

W. A. Flinner, near Spangle, secured 31,400 pounds of wheat from 29 acres of summer fallow, while from the 38 acres which were in peas the previous season he secured 63,923 pounds of wheat. In other words, he received a yield of 18

Continued on page five.

The Tractor Can Operate on Hillside as Well as Teams Can, if the Kodak Tells the Truth

The photograph above shows a tractor plowing on the farm of J. Martin Grein near Cheney, Wash. Edwin Rush, the engineer, who operated the outfit, plows and all, figures the actual cost of plowing at 72 cents an acre, not counting the original tractor cost nor depreciation. He used 27 gallons of distillate a day, averaging 16 acres in eight hours during the season.

"America's One and Only Great Business Today Is War." Read Article on Page 3 and Act.

Better Outlook Than Year Ago?

Warm Season Gives Wheat a Chance in Spite of a Poor Prospect Early in the Fall; Outlook May Be Better Than Year Ago.

BICKLETON, Klickitat County, Wash., Dec. 10.—The long dry spell was broken at last in November when we had several fine rains. The ground is now wet down six or seven inches. Some fall grain that was sown in the dust is now up in sight, and that which was sown after the rains has sprouted in the ground, but is not in sight yet. It is freezing night and is hardly warm enough for it to grow much. Take it altogether the outlook is more encouraging now than a year ago at this time for winter wheat to make a stand, as it generally grows some during the winter under the snow. Many are now plowing on account of reseeding this spring and many only sowed part of their summerfallow to fall grain and saved the rest for spring grain. The small grass that grows in the scab lands and among the bunch grass is now nice and green and stock is doing well. This is a big saving to the sheepmen as last fall there was no green grass and they spent thousands of dollars feeding their sheep on dry ground.

BERT H. FAULKNER.

Regulate Machinery, Too.

EPHRATA, Grant County, Wash., Dec. 13.—When the government set the price on wheat there was considerable disappointment on the part of the farmers at the price paid. However, after the price was raised, making the Coast as the terminal market, gradually the dissatisfaction has decreased. They are especially pleased because the government has stopped speculation in wheat, and hope that it continues this policy. They believe, also, that if the government regulates one commodity they should regulate other things, especially farm machinery. They feel that, owing to the fact that the price of wheat is regulated, so should the price of farm machinery be regulated. Live stock has been able to make its living on the range so far this year, as there has been very little or no snow at all—not enough, at least, to affect the grass on the range. Unless it comes an exceptionally hard winter, I believe the farmers in this county are prepared to feed their stock throughout the winter. Very little hay is offered for sale, as people that have any for sale have already sold, and very little is to be offered yet, except, perhaps, in the spring, when they may find they have a small surplus to sell. The farmers are all experiencing a great difficulty in getting shorts and bran and other mill feed, and no one seems to know the reason why mill feed can not be secured, but, with the amount of milling that will be done, it seems that some effort should be put forth by the food administration so that mill feed could be secured easier. Many farmers are feeding hogs who find it necessary to feed wheat. They do not like to do this, because the government is asking that wheat be conserved. They would very gladly use mill feed if it could be secured, but they have the stock on hand and can not get mill feed, so it is absolutely necessary that they have wheat fed to the hogs. The labor situation for next year does not look very encouraging. As this is almost strictly a rural county, the largest percentage of the boys drafted have been taken from the farms. It looks as if the labor situation would be a serious problem to overcome. Practically all of these boys are used to handling all kinds of farm machinery and a large number of horses, and it takes a person well experienced in farm work to do the work on one of the large wheat farms. Many of the farmers have thought it would be a good plan to have the schools in session six days a week, so the farm boys who are going to school would be out early enough in the spring to help put in the crops.

H. W. REAUGH.

Pasture Saves Hay.

CHEHALIS, Lewis County, Wash., Dec. 8.—It is rather early to say what effect the partial price regulation by the government of things bought and sold by the farmers will have. The people are taking the movement kindly, believing it to be a necessary war measure, and are waiting for developments. Merchants are taking advantage of the opportunity to regulate the abuse so common of delivery of small quantities of merchandise at any hour anywhere. In some cases grocers are quitting the delivery business or charging extra for the service, and all of them are making only one delivery a day. Eventually there will be a broad line of cleavage between regulation of the prices of what the farmer has to sell and what he has to buy. If the milk price to the farmer is kept at $3 per hundred or better all through the season there will be little cause for complaint on that score. The price of hogs seems very high, but the farmer with one or a few hogs finds a great difference between the price the butcher will pay him and the price he is expected to pay for a piece of bacon. The trouble with the regulation of what the farmer has to sell, if I see it right, is that it is regulated to not go too high, but there is nothing except supply and demand to regulate it from going down—potatoes, for instance, the raising of which was so encouraged before planting time. On the other hand, there is nothing to indicate that farming implements and the many articles of merchandise needed on the farm are to sell any lower or even at present levels. Every cloud is said to have its silver lining. Last spring the season was late and pastures could not be used at the usual time, forcing the purchase of much high-priced hay. This fall there was a seasonable rain in early September, which brought plenty of fall grass, and the weather has been fine nearly all the time since. The fall pasture has saved hundreds of tons of hay to Lewis county farmers, and most of them will pull through this year without having to go into the market for hay.

One farmer who sells hay each year took $25 a ton for his hay last April and May and said he did not want any more, although I believe he could have got a higher price for the asking. He said that was an awfully good price. I bought a little $25 hay and will say that I can not figure how it can be profitably fed except as a matter of necessity to carry a man through a pinch until pasture comes. The only special methods of feeding that I know of here are those of the dairymen who practice soiling and feeding ensilage. It goes without saying that every head of stock that does not seem to be a money-maker is being culled out to save feed. Many boys from the farms are serving in the army or navy and when one goes it almost invariably leaves a vacancy that is hard to fill. The situation is particularly bad in western Washington because at this time the sawmills are calling for almost unlimited numbers of men. However, farmers are utilizing their time to the best advantage and working every day that the weather permits—which has been practically every day this fall. Much fall plowing has been done and that will help a great deal when the spring rush comes. J. C. BUSH.

Recommends More Corn.

SOUTH BEND, Pacific County, Wash., Dec. 10.—The mild winter is helping the feeding situation. Those that are fortunate enough to have access to the higher tidelands are still pasturing their cattle and the cattle are fat and in excellent condition. Hay is selling at $28 a ton and bran at $34. A lot of hay and grain is shipped in every winter because the farmers can not raise enough for their own use. The silos are helping solve the problem. Emil Scholtz of Menlo, who experiments with different varieties of corn, urges dairymen to use more corn and roots, which do well in this vicinity. John Davidson of Lebam sold his dairy herd of fine Holsteins at auction, and averaged $108 per head. An extension school for the benefit of those interested in agriculture will be held for three days at Lebam, three days at Willapa and three days at Ilwaco, from December 11 to 20. The instructors are H. L. Blanchard, Leonard Hegnauer, R. N. Miller and J. C. Donaldson. As far as I can learn not a great many of our young farmers have been drafted. The shortage in labor has been met in some instances by the neighbors helping out with harvesting the crops. Public opinion favors the government fixing prices, provided the price allows a fair profit. A large number of our farmers have worked early and late and for years only realizing a living as compensation. There are very few abandoned farms in Pacific county, which shows that our farmers have persistence.

MRS. WINNIFRED BUCKINGHAM.

Clean Your Seed

and grade it by weight.

Clipper Cleaners

will do it as well as though you weighed each individual kernel.

Let us show you. Nine-tenths of the seed houses use Clipper Cleaners. Why?

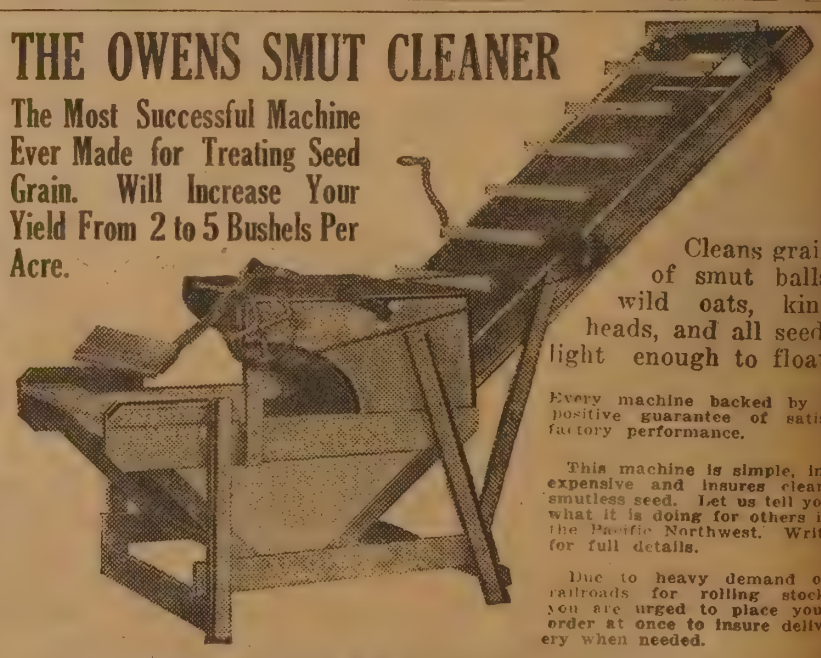
Selecting Before Buying

In this issue of the paper more than two score firms are bidding for a share of your trade. These firms have prepared catalogues and booklets in which their products are carefully described. Such catalogues and booklets contain many a valuable bit of information quite apart from what they say about the product itself.

The manufacturer of a plow may give us some excellent suggestions on soil analysis; the cream separator manufacturer's catalogue may give us a fresh idea that will save time and labor in handling our dairy work; and so on through the many lines of goods that are advertised in the columns of this paper week by week.



As we never permit any fraudulent advertising in our paper, knowingly, and guarantee our readers against loss in dealing with firms or individuals whose ads we print, this paper, if you will permit it, can be made a real help in aiding you to form opinions of things you want to buy before you buy them. If you go to a store to buy a saw or a pair of shoes you will naturally look at several before finally selecting. If there are a number of definite things you know about a certain make of saws—or shoes—you have some basis of comparison and stand to make a more satisfactory "buy."

Kindly make it a point to look through the ads we print each week. This is a busy and inventive world. And the ads keep you informed on improvements and discoveries.

When you see a catalogue or booklet advertised that fully describes something you are interested in, send for it. And when you send for it please mention the fact that you saw it advertised in this paper.

THE OWENS SMUT CLEANER

The Most Successful Machine Ever Made for Treating Seed Grain. Will Increase Your Yield From 2 to 5 Bushels Per Acre.

Cleans grain of smut balls, wild oats, king heads, and all seeds light enough to float.

Every machine backed by a positive guarantee of satisfactory performance.

This machine is simple, inexpensive and insures clean, smutless seed. Let us tell you what it is doing for others in the Pacific Northwest. Write for full details.

Due to heavy demand on railroads for rolling stock, you are urged to place your order at once to insure delivery when needed.

Vol. 40. No. 52 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF December 27, 1917

America's One Big Business Is to Win This War

America's one and only business today is war. Whether we like it or not, we are at war, and war to the death. The time for argument has passed. Never since the battle of Lexington have the people of this country been faced by the absolute necessity of instant and united action as they are faced by it now. We must arise as one man, or let American liberty and justice perish from the earth.

The United States must—MUST, not ought to—place 5,000,000 of her very best men on the battlefields with her allies at the earliest possible hour. They will go. From farm and factory and workshop they will go, ready to offer "the last full measure of devotion" to their country. No one should stand in their way, or seek to have them or any of them relieved of the responsibility to which their country has called them. Rather will every patriotic man and woman who remains at home do his or her utmost in their absence not only to maintain present efficiency of industry, but to increase that efficiency. Our soldiers must be armed and fed and clothed, and the person who contributes his utmost to arm and feed and clothe them is himself a soldier. America's war motto should be: "Soldiers Everywhere." Soldiers on the firing line; soldiers digging trenches; soldiers felling trees; soldiers building railroads; soldiers building ships; soldiers making munitions; soldiers making clothing; soldiers manufacturing foods; soldiers handling freight; soldiers producing foodstuffs—every man from the plow on the farm to the rifle in the trench equally indispensable as a part of the great war machine that must win this conflict. The person in any walk of life, in any industry—farm, office, factory, anywhere—who today thinks of self instead of America is to that extent as much a traitor to his country as the uniformed soldier who deserts the army.

Germany's efficiency has astounded the world. No other nation could alone have waged so successful and so long a war on practically the entire world as Germany has. But for decades she has been getting ready. Forty years ago Germany was putting into practice in her industries efficiency measures that America is today reluctantly and with difficulty putting into hers. German efficiency is such that every ounce of energy of every individual is applied without lost motion to the one great purpose, and America must follow the same ironclad rule. Every ounce of human energy must be applied that the soil may produce her utmost, and every ounce of that produce must be made to contribute to the accomplishment of America's one great purpose, the winning of this war.

When it comes to exemptions on account of occupation of the young man under the selective draft, section 80 of the regulations prescribed by President Wilson, November 8, 1917, says:

"It is the interest of the nation solely that must be subserved. The interest of individuals can not be considered as such and can only benefit from the action of district boards where the individual interest happens to coincide with the interest of the nation; and, furthermore, the success of the nation's military operations is the dominant object to which the conservation of certain industries is related as one means to that end."

In this connection the following part of rule 17 will be of interest:

"A particular industrial or agricultural enterprise shall be found to be necessary only when it is shown of such enterprise that it is a well conducted and going concern, contributing substantially and materially to the military establishment, the effective operation of the military forces, or the maintenance of the national interest during emergency, and, further, of a particular agricultural enterprise; that it is apparently producing an appreciable amount of agricultural produce over and above what is necessary for the maintenance of those living on the place."

The following definition of the word "necessary" as applied to the registrant is given in rule 18:

"1. That the registrant is actually and completely engaged in the enterprise in the capacity recited and that he is competent and qualified in that capacity.

"2. That the removal of the registrant would result in direct, substantial, material loss and detriment to the adequate and effective operation of the enterprise to a degree proportionate to the importance of the capacity recited in the rule.

"3. That the available supply of persons competent in the capacity recited in the rule is such that the registrant can not be replaced in such capacity without direct, substantial, material loss and detriment to the adequate and effective operation of the enterprise to a degree proportionate to the importance of such capacity.

"Note: In applying rule 18 the board shall consider generally:

"1. The length of time the registrant has been engaged in the capacity.

"2. The nature of claimant's study, training and experience.

"3. The actual condition which would result from his removal."

According to the selective service regulations—

Those engaged in, and necessary to the effective operation of, a necessary agricultural enterprise are to be exempted in class 1, first called.

Class 2 will include those exempted in class 1, but will exempt skilled farm laborers engaged in a necessary agricultural enterprise.

Class 3 will include those exempted in the first two classes, but will exempt assistant farm managers, farm foremen, etc., engaged in a necessary agricultural enterprise.

Class 4 will include those exempted in the first three classes, but will exempt those engaged in a necessary agricultural enterprise who are acting "in the capacity of sole managing, controlling and directing head of the enterprise."

To emphasize the importance of the farm in America's business of war is to repeat what every one knows. Every link in the great chain from the farm to the battle front must be without flaw. If one link fails, all will fail. The farm is the anchor link at the home end of the chain and must bear all the strain of the greatest effort America ever made. In view of the conditions as set forth in this article, what do you find it possible to do to add to the strength of the farm link in the chain? (See chart in center of this page.)

What Is Your Utmost?

Will you please make a cross in the square given below according to your plans for the coming year's crops, clip the list, sign your name and address and mail to the Editor of The Washington Farmer, Spokane, Wash. Your name will be held in strict confidence if you so request.

I am planning for the season of 1918 to change my usual system of farming by raising more, or by raising less, of the following farm products:

"We Are Going Up Against the Real Thing"

So Declares President Mess at the State Dairy Association Convention

By PAUL E. TRIEM.

Fireworks and explosions of various degrees of brilliancy and intonation punctuated the twenty-fifth annual meeting of the Washington State Dairymen's association, held at Sequim, December 13 and 14. Weather and social influences were all beneficent. J. L. Keeler, proprietor of the Sinclair hotel, handled the influx of dairymen with such address and geniality that everyone speedily felt at home. It is not often that so considerable an addition to the population of a small town is absorbed with so little disturbance and friction.

President Fred Mess in his annual address, called attention to increasing consumption of oleomargerine in this country. In 1915, the per capita consumption amounted to only one half pound. During the year 1917, this has reached the surprising figure of three and one-half pounds. In view of the recent discoveries of the peculiar feeding value of milk and butter fat, and of the importance in securing and maintaining growth of the vitamines and other unanalyzed substances found in these dairy products but not in oleomargerine, President Mess deplored the short sighted economy which led the public to substitute so much of the latter for part of the former.

Touching upon the hostile attitude of part of the press toward farmers and farming interests, the speaker concluded by referring to the topic uppermost in all minds.

"The big thing for all of us to consider at this time," declared President Mess, "is that we are at war. That war must be won at whatever cost. The world is looking to the farmer as never before in the annals of time for food supply. We farmers, like everyone else, are going up against the real thing."

W. A. Maughan of the Washington State college, delivered an interesting address on feeds and feeding problems particularly bearing on present conditions.

"If the man in the dairy business can but tide over the present," declared the speaker, "he will find things coming his way eventually. It is a mistake, however, to try to meet the present high prices of feed by reducing the cow's ration. The thing that should be aimed at is the elimination of waste. The cow must supply her own bodily needs before she has a surplus for the milk pail. We can not cut down on the normal amount of feed given the cow. That is one of the things we must emphasize."

Among other points brought out by Professor Maughan were the value of chopping hay and other roughage and grinding grain used in the dairy ration. Rolled grains are good, provided the rolling equipment is what it should be; otherwise, grinding is preferable. The use of some straw in the roughage and of molasses in quantities of not over four pounds to each cow per day were advocated, together with the use of roots both for their feeding and "toning" value. Returning to a point emphasized earlier in his talk, the speaker concluded:

"The more we feed a cow up to the point where she begins to put on fat, the more she gives us and the cheaper she gives it."

P. G. Kinzer came before the association to tell the dairymen some of the things he thought they ought to know about the Carnation company, whose accredited spokesman he was. Mr. Kinzer is one of the most able "harmonizers" in the country, and his frankness and geniality did much to win the admiration of even those of his listeners who were not particularly well disposed toward the condensery interests.

Referring to a topic which was later to come up for even more heated discussion among the association members, Mr. Kinzer asserted that in spite of the fact that many dairymen had declared the standardization law passed by the last legislature would put the small condensery out of business, the reverse had proved true. Without calling attention to the further fact that an unprecedented market now exists for milk products along the condensed milk line and that naturally the small condenseries must profit by this temporary condition, the Carnation man went on to deliver his diagnosis of the real nature of the trouble between the dairymen and the manufacturers.

"It all comes because of the fact that we don't get down around a table and talk things over as we should," he declared earnestly. "We're too far apart. We don't understand one another. Until this sort of mutual understanding is achieved, it is almost inevitable that petty strifes should continue."

Another remedy which Mr. Kinzer recommended for the consideration of the association was a law similar to one already in force in Oregon, requiring that all testers be licensed by the state, and that their work be done with state tested apparatus.

"Such a system can't hurt the farmers," commented the speaker, "and it can't hurt the condensers. If there is such a thing as honesty in the world, you should be willing to put this matter into the hands of your state officials."

Mr. Kinzer does not believe that the alarmist view of the dairy situation, particularly in regard to the alleged selling of dairy herds, is justified.

"I believe that when the figures are compiled for the year 1917," he predicted, "it will be found that there has been a bigger production than ever of dairy products. Personally, from my visits to the dairy regions of the northwest, I do not find it the case that the dairymen are selling their stock and going out of business. Much poor stock is being sold, but that is all."

So far Mr. Kinzer had come without "starting anything." At this point, however, he threw a monkey wrench into the machine by taking up the subject of "Hebemilk."

"The fact of the matter is," declared the speaker, "that the whole subject of Hebemilk is misunderstood. Carnation milk is the product on which we have built up our reputation. I admit that we are proud of Carnation milk, and you may be very sure that we will do nothing to injure the evaporated milk market. Hebemilk is used to fill certain demands that exist in certain parts of the world. It is not sold west of the Rocky mountains. As a representative of the Carnation company, I tell you that a time will surely come when you will have to admit that Hebemilk has been a good thing for the dairy interests."

This concluded the formal part of Mr. Kinzer's talk. Informally, it was continued by a many cornered debate between the Carnation man and various dairymen present who were sure there was a colored gentleman in the condensary wood pile, but who couldn't quite locate him. John Lee of Snohomish county, and Fred Nelson of King county, asked various questions which would have puzzled a man less open or perhaps less fluent than Mr. Kinzer. The latter could not be brought to admit, however, that the substitution for all the butterfat which could be extracted from milk of a vegetable oil, in the Hebe process, gave the Carnation company any undue power over the butter market, or was detrimental in any way to the interests of the producers.

F. B. Cavanaugh, president of the King County Dairymen's association, viewed the situation in a light diametrically opposed to that cast upon it by Mr. Kinzer. He predicted that if the present selling movement continued for 12 months, there would not be enough dairy products available to supply this country. Turning to the work his own association was doing, Mr. Cavanaugh said that the King county dairymen were preparing to build some sort of plant for handling their own output, and suggested that if the various county organizations were to send in reports of their work to a central state organization, to be elaborated into bulletins by the latter, this clearing house function would be of great value in arriving at a solution of the whole dairy problem. Mr. Cavanaugh concluded by quoting some production-cost figures from his account book, showing that the actual cost of producing milk had increased from 11.31 cents per gallon in July, 1916, to a little over 33 cents at present. No interest or overhead charges are figured into this cost, which Mr. Cavanaugh feels to be a minimum with good management in his part of the state.

Following the introduction of a resolution bearing on the Chinese labor question, Commissioner E. F. Benson, of the state agricultural department, addressed the meeting on the subject of the labor and feed problems, which he declared to be one in essence. Referring to present shortage of farm labor, Commissioner Benson declared:

"There have been mistakes made, which I think everyone recognizes, in taking from the farm skill laborers because they make such fine soldiers. In my own case, I know that I have been looking thirty days for a man to work on my farm, to take the place of one whom the national service took from me on three hours' notice. I believe that under the new regime this kind of thing will not happen, as farm labor will be placed close to the end of the list of available men."

Mr. Benson predicts that the labor question will not end with the war, and calls attention to the fact that we have made part of our own present trouble.

"In this country," he commented, "we have been coercing the hobo into his avocation by our system of distributing farm labor. The work in our wheat and fruit harvests cultivates the intermittent, migratory work habit."

Great enthusiasm was aroused by the speaker's declaration in favor of a law to conscript every idler, rich or poor. Mr. Benson declared that he would like to see these people given 30 days' notice of the passage of such a law, and then to allow no man more than three days of grace to find work, at any time.

W. H. Tierney, state organizer for the association, told of the trials and discouragements connected with his work.

"I do not think there is any doubt that the dairymen can get any reasonable legislation which they will agree upon," declared Mr. Tierney. "The trouble is that there is no unity of opinion or action. It is for this reason primarily, I believe, that I am forced to declare to you that our association has done nothing worthy of notice this year, in spite of the good work of its officers, some of its other members, and of the various locals."

Wm. T. McDonald, live stock commissioner for British Columbia, was present throughout the session, and his spirit of genial helpfulness did much to keep the wheels running smoothly. In his address before the dairymen he told of the good work in progress across the Canadian line, where the Fraser Valley Milk Producers' association and the producers serving Victoria, on Vancouver island, are doing fine organization work.

"The only thing that can wreck these institutions now," Mr. McDonald told his hearers, "is the abuse of the power they have attained through organization. There is no tendency in that direction, however, and I can assure you on the contrary that our dairymen have been more than fair with the public, and have made a consistent effort to sell as near the actual cost of production as is consistent with the continuance of the dairy business."

At the final session of the two-day meeting, Fred Nelson and William Bishop were allowed to tell their respective sides of the fight over the now famous "Senate Bill 90." The fact that the association went on record last year as opposing a standardization law was admitted by Mr. Bishop, who contended that the dairymen had been misinformed as to the merits of the case, and that it was only right that the people of our state should be protected by a law insuring the same quality of milk for their consumption which is guaranteed consumers of milk

(Continued on page seventeen.)

Meet at Kennewick

State Horticultural Association

The fourth annual meeting of the Washington State Horticultural association will be held at Kennewick, January 3, 4 and 5. The following is the program as far as completed:

Thursday, January 3.

Morning session—Address of welcome, J. R. Gardner, Kennewick; response, J. Howard Wright, Yakima; annual address of president; report of treasurer; "Magnitude and Importance of the Horticultural Interests of the State," Hon. E. F. Benson, commissioner of agriculture.

Afternoon session — "Arsenate of Lead," Frank E. Seely, Payette, Idaho; "Lime and Sulphur Solution," C. Joseph DeVise, Yakima.

Evening session — "Transportation Position of the Northwest Fruit Industry," J. Curtis Robinson, Seattle; "What a Community Can Do to Bring in a By-Products Plant," Robert C. Paulus, Salem, Ore.

Friday, January 4.

Morning session—"Pruning Stone Fruit," Professor O. M. Morris, Pullman; "Thinning Out vs. Heading Back as Methods of Pruning," Professor V. R. Gardner, Corvallis; "Some Phases of Alfalfa as a Cover Crop," P. S. Darlington, Wenatchee.

Afternoon session—"How the Rancher Can Improve His Labor Conditions," Dr. Henry Suzzallo, Seattle; "Putting Our Horticultural Inspection Work on a Business Basis," M. L. Dean, Olympia; "Irresponsible Grower vs. Irresponsible Commission Merchant," S. J. Harrison, Benton City, Wash.

Evening session—"Potato Diseases," illustrated lecture, Dr. F. D. Healt, Pullman; "Pollination of Sweet Cherries and Tragedy Prunes," Professor V. R. Gardner.

Saturday, January 5.

Morning session—"Ten Years' Experience With San Jose Scale," Dr. A. L. Melander, Pullman; "Construction of Air-Cooled Storage Houses," C. W. Mann, United States department of markets; "Picking the Apples for Flavor and Keeping Qualities," F. S. Allen, Yakima.

Afternoon session—"Handicap to Successful Marketing," P. R. Parks, Spokane; "Banking the Fruit Crop," J. J. Rouse, Spokane; "Abuses of Water on Fruit and Trees," D. T. Fisher, Wenatchee.

Evening session—"Colonization Australia vs. America," Dr. Elwood Mead, Berkeley, Cal., paper read by W. A. Wiggins, Toppenish.

Housekeepers' Week

Great Session Is Being Planned

Preparing wartime dishes that father and other men folks will eat and relish, eliminate kitchen wastes in preparing fruits and vegetables, relieving household drudgery or providing home-made but modern kitchen devices, transforming dad's cast-off clothes into serviceable suits for brother and even for sister, as well as how to make an $8 hat for 98 cents, are only a few of the scores of questions to be taken up during farmers' and housekeepers' week at the state college at Pullman, January 7 to 14, inclusive.

The state college for years has held meetings of one kind and another for the men folks, but this is the first gathering ever planned for the women, who really are the most important factors in the business of farming.

Trained men and women of national prominence are to be present at the gathering, among them including Miss Anna M. Barrows, demonstrator for the states relation service, United States department of agriculture, Washington, D. C., and O. H. Benson, national boys' and girls' club leader. Besides these there will be present prominent state officials and heads of all movements having to do with food conservation and the part we as individuals must play in helping to win the war.

Miss Mary E. Sutherland, director of the home economics department, says it will be possible for women who attend to complete a dress or make a hat in the one week of the session. Sewing machines, cooking devices and all manner of things which can be used by the women themselves during the week will be provided. A dozen or more trained specialists will be on hand to help in every department.

Provision has been made for sleeping quarters for all who come. A cafeteria has been arranged for in close proximity to the old administration building, where the sessions are to be held, and the railroads have promised a rate of a fare and a third to Pullman and return.

Entertainment in the form of pipe-organ recitals and illustrated lectures has been planned.

Marketing Farm Loan Bonds

Need Government Aid, War Having Upset Whole World

When the government put out its first Liberty loan The Farmer expressed a fear that increasing demands for war funds might interfere with the marketing of farm loan bonds. As we have previously explained, the market for these bonds is the foundation of the system. The land banks began by loaning their capital. Against the mortgages thus given by farmers the land banks issue and sell bonds. The money obtained by selling bonds is put out in other loans on other mortgages, and against these other mortgages more bonds are issued and offered for sale.

The system is, therefore, an endless chain that will keep revolving as long as there are applications for loans and buyers for the farm loan bonds.

Applications for loans are increasing, but the market for bonds has fallen off, and to meet that problem the administration has asked congress to authorize the secretary of the treasury to purchase $100,000,000 farm loan bonds during the next fiscal year. The senate promptly passed the bill before adjourning for the Christmas holidays, but the house postponed action until the reconvening of congress after New Year's.

Several congressmen opposed immediate consideration of the bill. Representative Snell of New York contended that the land banks were tending toward insolvency and that it was a bad precedent for the United States to take bonds from a corporation that could not sell them.

In ordinary times that objection would be valid. But these are extraordinary times. The nation is at war, and the government is draining the investment field. As a consequence all sorts of bonds are hard to market.

These facts carried great weight in the senate. Senator Hitchcock of Nebraska emphasized the safety of the plan, declaring that it would encourage the farmers to increase their crops; and Senator Nelson of Minnesota declared:

"The farmers are our allies in this war, just as much as our allies abroad, and I don't know why we should make any more distinction with them than we do with those abroad. If we want to encourage the farmers during the war here is our opportunity."

The government and the public must look at this problem in a broad and sympathetic way. Undoubtedly, if it had not been for the war, the land bank system would have easily supported itself and the land banks could have gone on indefinitely loaning money at 5 per cent. But the war has upset the whole world and made wreckage of many things. The land banks have found it necessary to increase the mortgage interest rate to 5 1-2 per cent, and it is not improbable that a further advance will have to be made. And meanwhile government aid is necessary to keep the chain revolving.

Whitman Gets Agent

Crop Increase Expected to Result

Whitman county, Wash., is to have a county agricultural agent. The county commissioners have accepted the offer of the government, through the state college, to furnish an agriculturalist for the county, the government paying his salary and the county paying his expenses. The expert is to be selected by the state college, at Pullman, with the approval of the board of commissioners. The agriculturist will work in all parts of the county and assist in increasing crop production. He will give advice and assistance to the farmers and strive to encourage diversified farming and a better system of farm tillage. He will be an expert in live stock as well as ordinary farming and will devote much of his time to trying to encourage the raising of more sheep, cattle and hogs on the big wheat farms of Whitman county. The selection of the agriculturist will probably be made at the January meeting of the board.

Will Discuss Live Stock

A winter school for the growers and breeders of live stock will be held at Quincy, Wash., Thursday, Friday and Saturday, January 3, 4 and 5. All phases of live stock will be taken up and discussed.

Dr. S. B. Nelson, head of the veterinary department, Washington State college, will talk concerning live stock diseases and their treatment. Professor William Hyslop, head of animal husbandry, Washington States college, will talk along the feeding and breeding of live stock, taking up cattle, hogs and sheep. H. W. Whittaker, poultryman at Washington State college, will take up the different phases of poultry, which will include housing, feeding and breeding. H. W. Reaugh, county agricultural agent, will talk along lines of forage crops and silos.

There has been no meeting of the Grant County Live Stock association. It is the intention to have Friday, January 4, all day, as the annual meeting of the Grant County Live Stock association.

Peas Prove Value

Improve Land and Produce Pork

(Continued from page one.)

bushels of wheat from summer fallow, against 28 bushels on pea land. It may be stated in passing that the 38 acres of peas brought Mr. Flinner $880 for the seed alone and furnished him a great quantity of valuable straw in the threshings. It cost Mr. Flinner at the rate of $35 more to care for 40 acres of peas than it did to summer fallow 40 acres.

C. D. Shepherd of Latah received over 5016 pounds of barley per acre after peas in 1916. This is 104 bushels per acre. Mr. Shepherd is also authority for the statement that he can always figure safely on 40 bushels of Bluestem wheat after peas during a normal season.

In 1916 John Ramm at Latah threshed 56,700 pounds of Gold Coin wheat from 20 acres of land which had been in peas in 1915, or 47 1-4 bushels per acre. Frank W. Pottratz on the opposite side of the road threshed 42 bushels per acre of the same variety of wheat following summerfallow. Mr. Lawson of Farmington threshed 500 bushels of Bluestem wheat from six and three-fourths acres of land in 1916, which had been in peas the previous season. He told his story in my office, December 10, in the presence of Professor Severance of Pullman and E. W. Coulter of the D. M. Ferry Seed company. This approximates 75 bushels per acre.

While this last year has been a decidedly poor season for securing data along this line, nevertheless, what evidence we were able to secure was in favor of pea land over other land. Owing to the dry fall of 1916, fall wheat was planted very sparingly on pea land, and where it was so planted, it did not survive the winter, which condition was common on summerfallow lands as well.

S. D. Doak, Orchard Prairie, had a portion of a field planted to wheat in 1916 and the balance to peas. During the season of 1917, the entire field was planted to oats and the line of demarcation was very distinct where the wheat left off and the peas began in the growth of oats the last summer. He was able to bind the oats on the land where peas had been grown the previous season, but on the other land, the crop was too short to bind.

J. J. Loeper, living on South Moran Prairie, figures that Bluestem wheat on land that was in peas in 1916, made him 25 bushels per acre in 1917.

One of the matters that I have emphasized over and over again is the great opportunity furnished farmers who grow peas, of reaping fine returns after the peas are cut for seed by turning in hogs to glean the shattered peas. The great difficulty I have found has been that it is almost impossible to have the weights of the pigs before and after running in the pea stubble.

This year I secured some data which gives a very good rule by which to figure.

E. W. Dickson weighed pigs out from the stock yards at 60 pounds and after 24 days' pasturing on peas returned them at a weight of 96 pounds. This gives a gain of one and one-half pounds per day.

The following data has been secured from farmers who have used hogs to glean their fields:

James Hays of Waverly had 110 head of hogs on 50 acres of pea field, from which he had threshed 50 bushels per acre, for six weeks. If these hogs made as good returns as that cited above there would have been produced 6930 pounds of pork. These hogs sold at 10 1-4 cents per pound, or a total of $694.75 return from the 50 acres, or over $13 per acre.

C. D. Shepherd, Latah, kept 145 pigs and hogs on a 60-acre pea field for six weeks in 1916. After he had cut and threshed 58 acres of peas, securing 914 sacks, averaging 140 pounds per sack, the hogs made their living from what was left. At one and one-half pounds gain per head per day and at 8 cents per pound, this would amount to $710.80, or approximately $12 per acre.

This data is sufficient to warrant placing a very high value on pea stubble for hog feed and to encourage the keeping of hogs on every farm where peas are grown.

And Proud of It.

A woman of a Massachusetts town made application for a Liberty bond, and in answer to the question on the blank as to the denomination desired, she filled in "Methodist."

Receiver or Executor?

Which Is Preferable to Business?

Frank A. Vanderlip, president of the largest bank in America, who has sidetracked his own business to direct Uncle Sam's $2,000,000,000 war savings certiifcate campaign, delivered a number of shoulder blows in an address at New York last week.

From the beginning of the war Mr. Vanderlip has punched the fallacious slogan, "business as usual." We can't do business as usual and win the war, he has been telling business men everywhere. He is calling on the American people to cut off every unnecessary expenditure until the war is won, in order that they may save the last possible dollar to put into thrift stamps, Liberty bonds, Red Cross donations and other war funds. Here are a few of his vigorous sentences:

"You may say that the business man must live. But must he? There are a great many men who will not live. Wouldn't you rather have a receiver than an executor?

"If need be we can wreck the business of luxury for the time being. We have got greater business.

"That dollar is a traitor dollar—it is allied to the enemy—if you so spend it that you interfere with the production of things that the army needs.

"Before the war we were on the road to an economic smash. We were wasteful and extravagant. We are now, however, on the road to a lesson in thrift that we ought to have.

"Full shelves will stop production of unnecessary things. Empty shelves mean that the retailers order more, the manufacturers produce more; hence more labor and materials are used.

"I think for a time the war savings certificate plan will interfere with the growth of savings bank deposits. In the end, if the lesson is learned, and we make, as I believe we will, 30,000,000 holders of these certiifcates, we will have implanted thrift in the hearts of our people so that our savings deposits will grow as they have never grown before.

"Business is coming closer to government—government is coming closer to business. That is another valuable by-product of the war."

If you are not buying thrift stamps you are not doing your part toward the winning of the war. Practically every Farmer reader can join in this great campaign. If you haven't handy the $4.12 needed to buy your first war stamp outright, you can start with 25 cents and a thrift card.

Ask your postmaster, your mail carrier or your banker for further information. Cut out luxuries, indulgences. Put your dollars back of the boys who are going to France.

Church for Community Use.

The new Church of Christ of Creston, Wash., was dedicated recently under the leadership of Rev. J. W. Baker of Seattle, and the local pastor, E. I. Mitchell. The church is modern in every way and is well equipped to take care of all community gatherings and has been built with that end in view, as well as taking care of the social life of the community as far as possible. The church, which cost $8300, was dedicated free from debt.

Sons of Farms Are Called to War

The effect of the war on farm labor is illustrated by the experience of Riley Rice of Cottonwood, Idaho, retiring president of the farmers' union for Washington and northern Idaho.

"Last spring one of my sons at home enlisted in the service," says Mr. Rice. "The other is now registered and subject to call under the selective draft law. Likely he will be called before long, and when he is, it practically means that I will have to quit my farming business."

The farmers attending the union convention at Spokane last week were loyally patriotic, but there was present a strong feeling that the results of their efforts toward increased production were being greatly minimized through the depletion of the ranks of farm help by the army and navy.

"We are not complaining," said one in discussing the matter. "We are stating a fact. We'll give our hired men and our sons and go ourselves if the nation needs us more in the army than on the farm. But if it is necessary that our crops be increased as the government tells us it is, then it seems to follow logically that our services are as valuable behind the plow as on the battle front."

Today the Red Cross Needs Your Aid

Fill out the coupon below and mail it to the Editor of The Washington Farmer, Spokane, Wash. Upon receiving this coupon you will be enrolled as a member of the Patriotic League of The Washington Farmer.

I am glad to express my patriotism at this time by pledging myself to render whatever special service I can to my country, and will you tell me especially about Red Cross work and the different ways in which I may be able to aid in that work?

Name ....

Postoffice ....

Watch the Red Cross department of the Farmer each week for different ways in which you can help in this work.

The following have been enrolled as members of the Patriotic League of The Washington Farmer:

Mrs. W. T. S. Lumbar, Colby, Wash.
Mrs. L. W. Hill, Anacortes, Wash.
Mrs. Mamie Mitchell, Rochester, Wash.
Mrs. Gust Nelson, St. John, Wash.
Miss Emily Burns, West Sound, Wash.
M. E. Osborn, Burlington, Wash.
H. J. Ziegelmaier, Puyallup, Wash.
Mrs. H. J. Ziegelmaier, Puyallup, Wash.
Mrs. Henry Grinnell, Addy, Wash.
James A. Parker, Palouse, Wash.
Mrs. Effie Armstrong, Curlew, Wash.
W. J. Elliott and family, Colbert, Wash.
Mrs. Henry Harding, Chelan, Wash.
A. D. Leach, Leavenworth, Wash.
Mrs. Sylvia Gray, Puyallup, Wash.
Mrs. F. W. Eisenhardt, Castle Rock, Wash.
Mrs. W. J. Harm, Enumclaw, Wash.
Mrs. E. G. Hoffer, Bossburg, Wash.
Florence G. Hunton, East Sound, Wash.
Mrs. J. H. Stuckrath, Chehalis.
Mrs. Margaret Pool, Lamont.
C. Krogness, Quincy.
Mrs. C. Krogness, Quincy.
Mrs. Clarence Pitchford, Silver Lake.
Mrs. E. A. Kiser, Tiger.
Clara E. Hyerstay, Woodland.
Mrs. Elise Brown, Malott.
Alva Ruark, Pomeroy.
Mrs. Alva Ruark, Pomeroy.
Mrs. George Crossland, Brewster.
A. Bakie, Warden.
Miss Hazel Stratton, Rockford.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Agriculture After the War

What will be the future of agriculture after the war? Will prices fall sharply, decline slowly or maintain their present high levels?

Herbert Quick, of the Federal Farm Loan board, predicts continuing high prices and world need of increased food supplies. This need, which America must meet, he thinks, will be a continuing one long after the war.

The problem, he added, must be met by substituting machinery for man power, the reclamation of waste land, upbuilding of soil fertility, and making every acre produce to its full capacity.

Our own guess would be that, while low prices need not be expected for several years, we may look for cheaper food products with the ending of the war and the return to the soil of millions of men now on the fighting lines. Even now, with about 40,000,000 men in the armies and navies of the world, the wheat shortage is not a world shortage, but is confined to the European countries. Right now there is nearly enough wheat visible to supply normal world needs if there were ships enough to move it from the countries that have a surplus, like Australia and India. The shortage, then, is really in transportation rather than in the product.

On the other hand, there is a world shortage in live stock, and meat prices promise to keep comparatively high for several years after the war.

Our counsel to farmers is to be cautious about contracting unnecessary debts, say for the purchase of land to add to holdings already large, or to put into improvements not absolutely necessary at this time.

When the skies are black and war tempests are blowing furiously, prudence is a virtue not to be lightly cast aside.

Beans and Potatoes

As corn was once a watchword in the northwest, now the cry is for beans and potatoes.

Good food is a valuable crop and particularly so right now, with not only a reduced production in Europe, but the likelihood of hundreds of young fellows in our own land—boys who have helped produce food—in the ranks.

The man in the uniform gets the cheers, and he deserves them for he faces death in many forms and does it bravely; but there is a burden without glory which somebody must do—the burden of feeding extra mouths who destroy instead of produce. This is absolutely vital, but it brings no plaudits.

If possible, let us have a little more appreciation for the men who are as sincerely patriotic as the men with rifles—the men who make it possible for armies to live.

Prohibition Up to the People

Once again the matter of prohibition is squarely up to the people. Idaho, Oregon and Washington are already in the ranks of the dry, but now congress has placed before the people of these states the opportunity of taking a hand in putting the entire nation dry. Both houses of congress have passed the bill amending the national constitution so as to prohibit the manufacture and sale of intoxicating liquors in any state or territory in the Union. Before it becomes effective the amendment must be ratified by three-fourths of the states of the Union—thirty-six states. By the terms of the measure as passed the states have seven years in which to ratify the amendment, but the question has been raised as to whether or not congress has authority to limit the time within which it must be ratified.

The present times are so abnormal that the placing of this matter before the states has stirred little excitement. Already more than half the states of the nation have some form of prohibition, and liquor has but recently received a staggering blow through the food administration's regulations forbidding the use of grains in the manufacture of alcoholic beverages. Opponents of liquor are getting the habit of winning lately, after years of relentless warfare on the traffic. But the present advantages should be followed up with the same relentlessness. Liquor will not give up until every vestige of hope is destroyed. Hope is fast deserting the traffic before such victories as have marked the prohibition fight recently, but now is the time for the knockout blow.

The people of the northwest must follow up the work so faithfully and successfully done during the past decades, and be ready when the proper hour comes to speak unmistakably in favor of the ratification of this epoch-making constitutional amendment.

Reclaiming Cowlitz Land

Cowlitz county has redeemed a good deal of land subject to inundation in the past few years. No less than four diking districts have been inaugurated, and the fourth is now nearing completion.

The four are said to redeem from 12,000 to 14,000 acres of land—the finest and most productive land anywhere. On one of the projects the owner planted oats and reaped 96 bushels to the acre. On a 40-acre field an average yield of 67 bushels of wheat was secured. Potatoes do well on this silt land, as do almost all crops.

Diking district No. 4 lies in the angle formed by the Cowlitz and Columbia rivers. This dike will probably reclaim 2600 acres of land belonging chiefly to Wallace Huntington, O. Olson and Frank G. Barnes. The dike will protect against 28 feet of water at Portland. The land is divided into three zones, and will be assessed according to the benefit derived. The cost will approximate $88,000.

"What Is There in It for Me?"

This is the slogan of selfishness, and is one of our curses of modern life. Recently a man said to the writer:

"We have had too much individualism in American life." We have not had the spirit of cooperation, and how can we hope to have the practice before we have the soul of the thing?"

It is right and proper to be as independent as life permits us to be, but that independence should not drive us away from our neighbors and friends. It should make us more willing to extend a helping hand and not to draw away and live to ourselves all the time. This shrinking into our shells is not selfishness necessarily, but it is apt to lead to it.

The first thought to come after we consider any act is not "what is there in it for me?" If we do our whole duty cheerfully and gladly, not for our own sakes, but for the good of the world and our nation, we will not suffer, for life is a strange thing—it pays dividends on unselfishness and kindness.

Washington Gleanings

Yakima shippers have undertaken to furnish 20 carloads of apples for American soldiers in Europe.

Fire of unknown origin destroyed the Batteron warehouse at Malaga, which housed in the vicinity of 15,000 boxes of apples.

The Utah-Idaho Sugar company of North Yakima has distributed $199,619, representing payment for 28,517 tons of beets delivered during November.

During the four weeks' school vacation to aid in the apple harvest the pupils of Omak schools packed apples to fill a train of 25 cars of 630 boxes to the car.

The Moxee City Cheese and Butter factory, the fourth to be erected in the Yakima valley in the last two years, has been completed and will be ready to turn out products within the next few days.

It is the plan of County Agent A. B. Nystrom to obtain several tracts in various parts of Lewis county on which experimental and demonstration work can be carried on under the supervision of his office.

Ashur Hobson of the state bureau of farm markets has organized a number of cooperative markets throughout the state, a market exchange at Merton, Lewis county, and a cooperative creamery at Port Angeles.

As a result of talks on marketing by G. S. Wehrwein at the farmers' extension school held in the Boistfort grange hall recently the farmers of the Klaber district, near Centralia, plan the organization of a marketing association.

Preliminary plans for the Western Dairy Products show which will be held in North Yakima February 28-March 2, have been made by officials of the commercial club and G. E. Frevert of Salt Lake, president of the association.

Dr. W. J. Spillman, formerly of the Washington States college, and at present in the service of the United States department of agriculture, is to return to the Pullman institution shortly in the capacity of dean of the college of agriculture.

At a joint two-day meeting of the dairymen's associations of Whatcom, Skagit and Snohomish counties at Burlington the convention adopted resolutions pledging to the government during the war their labor, property, and if need be their lives.

The third sugar factory for the Yakima valley is practically assured at Sunnyside, where contracts for 5000 acres of sugar beets have been secured and the Utah-Idaho Sugar company is making arrangements to erect a plant to be completed by October 1, 1918.

This state, Mrs. Setchfield, county leader of Thurston county, reports was the only one with a food exhibit at the National Education association convention in Portland, and Thurston county was represented there by a team of girls with an exhibit of 59 different articles of canned goods.

The market at Camp Lewis of the Thurston County Dairy and Farm Products association is proceeding in fine shape according to reports. A carload of carrots will be sent soon from Plum station and the supply of milk which is being sent over is steadily increasing. The market building itself is in the last stages of completion.

What Others Say

Journal, Friday Harbor: Our appeal to the farmer would be to hold on to the good dairy cows. Why? Because of the food value of milk and its products.

Times, Waitsburg: Another year's strenuous work is before us, if no more, and we should all profit by both the successes and the failures of the past year.

American, Anacortes: Since war was declared there has been a genuine awakening of the true American spirit and many people have demonstrated that there has long lain dormant within them the spirit of their forefathers—that spirit that conquered a wilderness and finally brought into existence the most wonderful nation the world has ever known.

Journal, Kent: While Washington is not classed as a corn state, it is interesting to note that 1,520,000 bushels of corn were harvested this year, besides hundreds of thousands of tons of corn ensilage. The farmers of Washington also produced 9,880,000 bushels of potatoes, King county being at the head of the 39 counties of the state, with a record production of 877,700 bushels.

Must Keep in Mind Our Responsibility

Must Labor to Accomplish Greatest Good and Do Our Utmost for Nation and for Humanity

Calling upon the farmers of the Washington and northern Idaho division of the Farmers' union to stand loyally behind the government in every way possible during the present war crisis, Riley Rice of Cottonwood, Idaho, who last fall succeeded to the presidency of the union upon the resignation of President J. V. McCall of Hay, Wash., delivered a rousing appeal in his address before the convention at Spokane last week. His address in full follows:

In this, our ninth annual convention, we meet under conditions which we have never faced before. We are at war with a powerful enemy which is opposed to all forms of free institutions. While our nation is in this war to win, we dare not lose sight of the fact that the farmers of this nation are the vital factors for victory. Largely upon the farmers of America falls the incalculable burden of producing the foodstuffs, not only for feeding our own soldier boys at the battle front as well as sustaining the life of the nation at home, but also of supplying food support for our allies who have fought and sacrificed both in blood and treasure in sustaining humanity's cause of freedom. President Wilson has wisely said, "on the production of our soils, the issue depends." We must, therefore, keep constantly in mind our responsibility and so labor as to accomplish the greatest amount of good; render the largest service; do our utmost for our nation and for humanity.

My personal knowledge of the farmers of this jurisdiction permits me to speak for the ears of the nation and the world, that the farmers of the extreme northwest are Americans of loyalty and devotion to institutions of freedom. They have given of their sons for the sacrifices of actual warfare. They have contributed of their money for the financial sustenance of the nation in this time of need. They are devotedly patriotic as their deeds constantly show, in fact so busy in the service of the nation within the realm of their calling that they do not have time to wrap the flag about themselves and shout their patriotism.

The major purpose of this convention, at this critical time must be unqualifiedly to work for greater efficiency among the producers of the soil. Our problems therefore is to make this meeting so fraught with achievement as to render the farmers of this jurisdiction more capable for results for the strength of the nation than ever before. This will necessarily compel us to take up both the end of increased production and more economical distribution and at the same time strike against waste and abuse by the "pay" patriots, who, through systematic manipulation, attach unwarranted burdens upon the people of the nation by the collection of exhorbitant prices, waxing rich in excess war profits.

The most important item to be emphasized to this end is the necessity of strengthening our organization. It has been thoroughly demonstrated that the farmers need their organization now as never before. The only hope for protection of the rights of the farmers lies in organization. Not merely a few who are blessed with a vision and are willing devotees, but every producer should be within his organization with all of the others of his calling so as to have a united force with which to meet the problems that are arising and which affect the life of the farmer so materially. Anyone, with an unbiased mind, will of necessity admit that the farmers of the northwest have been getting anything but a "square deal" under the standards of grain grades and the method of administration. The farmer has the right to complain but it is useless to waste any time in complaint without a strong organization to carry these complaints to a source of relief. And while regulations are placed upon the farmer, there seems to be no limit to the prices he must pay for machinery, implements and much of his supplies.

It is important that the position of the farmer be unequivocally set forth so that the nation may know his attitude on these issues. I ask you therefore to mark well what this attitude is so that, regardless of what may be said from irresponsible and biased sources, the position of the farmer stands out as clear and is the embodiment of true patriotism: "We claim that the government not only has the right, but that it is its bounden duty to regulate the prices of the food stuffs of the nation. Also it is the right and equally the bounden duty of the government that this regulation should be made upon all of the commodities and necessities of life and on the materials necessary for carrying on the war to victory."

In our support of the government on its program of regulation, the farmers should be organized to the maximum so that the forces with which we have to deal will realize that they are meeting an issue of an organized industry and not just a few zealous laborers for the right. Then again when the war is over, the readjustment of general conditions will call for the greatest unity of action to protect the tillers of the soil against manipulation and speculation through the agencies of the gamblers and speculators who, with farmers in an unorganized condition, will put into operation a system of economic abuse upon both the producer and consumer. We must be in such a condition of organized strength as to fairly meet and effectively deal with these problems which are sure to arise.

Also the peace, happiness and real pleasure of living can best be secured and most widely extended by the brotherhood and fellowship; the sympathy and cooperation of a true application of the principles of the farmers' union. Were there nothing more than this to emanate, the organization would be abundantly justified. But as this is both fraternal and business, as an organization, the advantage and benefits are so innumerable as to make arguments unnecessary in behalf of the farmers' union. I want to add, however, that where both the spirit of community fellowship and business cooperation are equally emphasized, there, in our jurisdiction, we find happy people accomplishing great things.

There is one point however in the business enterprises of our organization that needs attention. We have some mighty big farmers' business concerns. They have achieved success against most trying conditions in many instances. They were organized principally before we, here in the northwest, got the real vision of practical cooperation. In view of this and for the strength of both the business enterprises and the union, some realignments should be made, the character of which will be presented during our convention.

There is one thing, brethren, that should be born in mind all through our deliberations and in our every day activities: The farmer must be ever vigilent if he hopes to sustain his own rights and prevent both the producer and consumer from being overburdened by the system of those who continually seek to prey. And we should clearly recognize that burdensome or wrong conditions exist through the sanction of the law; the administration of the law; or the interpretation of the law. The exercise of public functions should be within the hands of men of the highest type of true, honest citizenship. The professional office seeker and shyster politician have too long garnered the votes of farmers only to betray them. Let us seek carefully, scrutinize critically and select with diligence those upon whom we endow the sacred functions of public trust. Partization politics have continually got us into worse conditions. Elimination of partizanship and the selection of honest, competent officials should raise our political standards as an aid in the solution of our economic problems.

As you are aware, brethren, I have been acting as your leader-in-chief for only a few months. It has been my honor to be selected at your hands successively for the last eight years as vice president of our organization. It was from this post, I was summoned last September to assume the presidency upon the resignation of the president. The organization, as we all know, was in a run-down condition. No unusual record of constructive work could be instituted and carried out during this short period. But the efforts have been for the purpose of laying a firm foundation for future strength and lasting results. You should know how carefully, loyally and with what sound judgment your state executive committee has directed the course of your organization in this critical period. Under their able direction, with the aid of our state secretary, Brother Cross, and also the praiseworthy labors of Brother Elmore, I am pleased to be able to have called this convention, so that your servants may report of their stewardship. You can look to the future with hope and certainty.

Our organization is as great as we make it great. The time is at hand for the fullest application of cooperative zeal and fraternal loyalty. Our achievements for the future will be measured in success only by this rule.

Is a Fine Paper.

To The Washington Farmer: I can not think of any of my neighbors that are not taking your good paper. The Washington Farmer is a fine paper. Please let me thank you for your kind offer.

No Other Tractor Like It

SEND the coupon below for the wonderful story of the little Bean TrackPULL Tractor—the tractor that works in orchards and vineyards as no other tractor can. Note some of the features listed below. Then get the book at once. Compare this tractor with the kind you know. See how this one fits your needs.

1. Pulls instead of pushes itself over the ground.
2. Can be "gee-ed" and "haw-ed" out of holes and soft places like a team.
3. Has full-power pull on turns as on the straight-away.
4. Turns clear around in a 10-foot circle (5-foot radius).
5. Plows or harrows as close up in the corners of fields as a team.
6. Plows as close to vines and trees as a team.
7. Makes little difference how far off center you hitch.
8. Goes under branches of trees no team can get under.
9. Runs stationary machinery up to 10 h.p. when not in the fields.
10. Weighs less and costs less to run than wheel-type tractors of same power.
11. Pays for itself in what it saves.
12. Light weight on long track surface.
13. Cultivates 10 to 15 acres in 10 hours.
14. Plows from 4 to 7 acres in 10 hours.
15. Little power required to pull tractor—power all goes to pull implements.

BEAN TrackPULL Tractor

Mail the coupon now — it doesn't obligate you. It simply brings you all the facts. When you get them decide if you want the patented Bean or an ordinary kind. For more than 30 years we have built and sold reliable orchard and farm machines. You can rely on the fact that the Bean Tractor *at work* makes good our every claim.

Bean Spray Pump Co.
654 W. Julian St., San Jose, Cal.

Please send me your Tractor Book with full information about the BeanPULL Tractor.

A. B. NYSTROM, Editorial Contributor

NEW FEEDING PLAN.

Mixes a Number of Kinds of Feed

To the Editor: I am trying a new economical method of feeding cows, which is giving good results. At an expense of $2, I made a cutting trough and am cutting oat straw, wetting it in mixing trough, sprinkling it over with shorts and alfalfa meal in equal parts and a little salt, and stirring all thoroughly. The cows relish it immensely. It is not more than one-half or one-third as expensive as alfalfa and shorts, and the cows are improving in milk and appearance.

W. T. JACKSON.

Stevenson, Wash.

$7000 in Five Years.

R. D. Sanford of Ashland, Ore., in 1912 invested $1300 in registered Jersey cattle. From the sale of cream and young stock and from bull service, and estimating the value of young stock on hand at the same range of prices as those sold, Mr. Sanford finds his Jerseys have given him, in the five years, an income of $7000. Mr. Sanford's investment consisted of three cows and a bull just past a year old. He paid good prices for all his stock, including $400 for Melia's Laura of Albany, at the Burkhart dispersion sale. But she has been the source of his greatest profit. As a 3-year-old she had made a record for Mr. Burkhart of 7916 pounds of milk and 542.46 pounds of butter. As a 5-year-old she produced 11,372.35 pounds of milk and 77.1 pounds of butter, and at 8 years old she made the remarkable production of 15,920.8 pounds of milk and 990 pounds of butter. None of these records are official, but they are well authenticated, and the offspring of Melia's Laura has been in strong demand.

Mr. Sanford, Ralph Billings and a few other dairymen of the vicinity of Ashland are anxious for a cow-testing association to be formed, and, if possible, official test work. So far enough dairymen have not been interested, but the prospect now looks favorable.

H. A.

Ration for Dairy Cows

To the Editor: What would be the best ration to feed dairy cows? We have barley that is not of a good quality that we are grinding and mixing with oats, equal amount of corn silage and mixed hay. Would it be cheaper to buy bran at $32, shorts at $35, oil meal at 4 cents a pound, or oats at $49? What would be the best to mix with the barley? —R. D. P., Van Buren, Wash.

I am not sure that I know what you mean by the term "mixed hay," but I presume you refer to the native hays in the Puget sound region rather than to clover and timothy. Most of the native hays are inferior as dairy feeds. Still they may be used as fillers and I would give the cow as much of it as she will clean up, in addition to 35 or 40 pounds of corn silage per day. With this roughage your ration does not need barley. It would be better to mix 200 pounds of ground oats, 400 pounds of bran and 50 pounds of oil meal. If you find it necessary to use the barley feed it in place of the oats or better use 100 pounds of each in the above mixture. This concentrate should be fed to the cows in the proportion of one pound of grain for each three and one-half pounds of milk produced.

A. B. N.

APPLE POMACE

Makes Good Feed for Dairy Cow.

Kindly tell me whether or not apple pomace is good for dairy cows and what is its feeding value?—J. E. P.

This question was answered by M. O. Maughan of W. S. C.:

Apple pomace can be considered a good succulent feed for dairy cows and its use is to be recommended. When placing it in the silo care must be exercised to add sufficient water so as to make it more palatable and succulent. Otherwise it is too dry and is not so readily eaten.

The dry pomace has the following composition and is reported as being equal in feeding value to corn silage. However, when the water is added it is not as nutritious pound for pound as corn silage. Dry matter, 23.3 per cent; digestible protein, 1.2 per cent; digestible carbohydrates, 15.6 per cent; digestible fat, 0.8 per cent, making the total digestible nutrients, 18.6 per cent.

Torkleson Has Honor Cow.

The records of all the Oregon cow testing associations for the month of October have been received by the county agricultural agent at Redmond. In all 15 associations reported from Coos, Curry, Lane, Douglas, Tillamook, Linn, Polk, Yamhill, Gresham, Washington, Marion, Clackamas, Crook and Deschutes counties. Deschutes county had the honor of being the home of the cow producing the highest amount of butter fat during the month, says R. A. Ward, the county agent.

Bert Torkelson's honor cow, Daisy, produced 1308 pounds of milk and 74.6 pounds of butter fat in October. The next highest one in the state produced only 67.76 pounds of butter fat during the month so Daisy's record is safe by quite a margin.

Mr. Torkelson also had the highest herd in the central Oregon association; five cows had an average production of 869.2 pounds of milk containing 49.94 pounds of fat.

In commenting upon the work of the association, County Agent Ward said: "The value of cow testing in weeding out undesirable boarders can be readily seen, when one compares the production of Mr. Torkleson's cows with the rest of the cows tested in our association. The total average for all cows in the association was 618 pounds of milk each, containing 27.8 pounds of butter fat. Average cost of feed $7.76. With butter fat at 52c, the value of Torkelson's cow over the average cow in our herds is at once evident.

Plan Cooperative Creamery.

Plans are well on toward completion for operating a cooperative creamery in Medford, Ore. Between 75 and 100 patrons are signed up, with over 500 cows. George A. Morse of Talent is president; F. C. Hollabaugh, Talent, vice president; Frank Davis, Medford, secretary and treasurer. The latter is an experienced creamery man on both the mechanical and business departments.

H. A.

Cultivating Timothy

To the Editor: Would you tell me whether it is worth while to cultivate timothy ground? If so, should it be done in the fall or spring?—D. F., Oakesdale, Wash.

In answer to the above question E. G. Schafer, professor of farm crops at the Washington State college, says:

I can not give you the experience of any growers who have actually made a practice of cultivating timothy. The value, however, of cultivation of any crop results largely from aeration of the soil, putting it in good tilth and destroying the weeds. In order to do this to the best advantage it is necessary to plow the land for the wheat crop when wheat or other grains are seeded. Of course, it is impossible to replow the land when you have timothy growing on the ground except when you plow up the timothy and use the land for some other crop. However, the same benefit which results from plowing or tillage for other crops would in a measure be beneficial to timothy if properly cultivated. I believe it would be preferable to perform such tillage in the spring. I may say, however, that at the base of the timothy plant a bulb is formed for the production of a new stalk or set of timothy. If these are injured to a great extent, of course, it will retard the growth and therefore the production of the crop. Tillage operations should not be severe enough to do any great damage to these bulbs and hence to the plant.

World's Wheat Stocks.

Available supplies of wheat in United States, Canada, Europe and other countries were 264,823,000 bushels November 1, according to the Daily Trade Bulletin. There was an increase in October of 28,949,000 bushels, compared with 3,198,000 in September and 25,511,000 in October, 1916. Total a year ago, 276,715,000 bushels.

Stocks in the United States were 34,914,000 bushels, an increase last month of 9,960,000, compared with a gain of 6,801,000 last year. Total last year, 118,035,000 bushels.

Canadian stocks were 41,764,000 bushels, an increase last month of 23,000,000, compared with a gain of 25,332,000 last year, when supplies were 46,292,000 bushels.

CUTTER'S
BLACKLEG PILLS
"California's Favorite" for nearly 20 years
For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

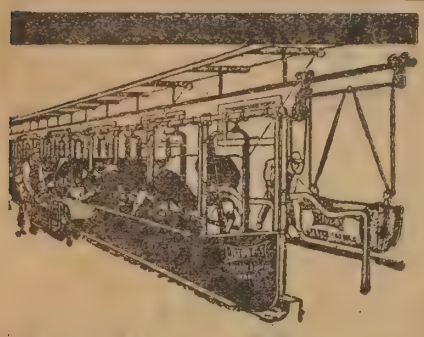
Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:
10 dose pkge. Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg, and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.



The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago

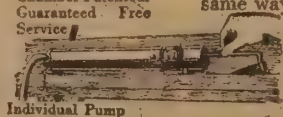
The NEW HINMAN MILKER

The HINMAN Milker has been made the recognized standard of perfection and efficiency thru our 10 years of concentration on one type of machine —the Individual Pump—Valve Chamber Milker.

10 Years' Success



Over 30,000 Sold

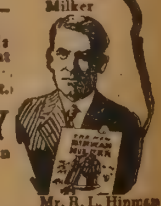
ACCOMPLISHMENTS ATTAINED

This specialization has meant refinement in design and workmanship—insured mechanical betterments—insured adaptability to the great variety of physical condition found in every dairy herd.

The cow does not have to be adapted to the HINMAN. Odd cows—nervous cows—easy milkers—hard milkers—and cows with uneven udders are made comfortable by the HINMAN Individual Pump—Single unit—adaptable—to-each-cow machine that always milks the same way day in and day out.

Protected Valve Chamber Patented. Guaranteed Free Service

Individual Pump with Simple Adjustable Vacuum Control



The HINMAN Principal Stands Approved. It's the only sure way to offset increasing costs in the dairy. It is no experiment for you when thousands use it successfully. Its simplicity and volume means low cost to you.

Study Specifications

Capacity:—1 man—3 milkers—18 to 25 cows per hour.
Weight:—17 lbs.
Power Required:—1-6 H.P. per single unit, gas or electric.
Pail Capacity:—40 lbs.
Protected Vacuum Valve Chamber:—patented; automatic—operates with no adjustments.
Demountable Claw:—seamless teat cups, improved mouthpiece rubbers, special grade rubber tubing.
Individual Portable Pump:—eliminates tank and pipe system.
Armco Rust Resisting Pail:—with patented rail rest for teat cups.
Individual Cow Record can be kept.

Natural Action Teat Cups with Improved Sanitary Claw

Sheep on the Farm

A striking instance of the value of sheep on a farm and the rapid increase and profit with a few well-bred sheep is the experience of Walter Smith, who sold a small flock of Shropshire ewes at Enterprise, Ore., nearly three years ago. To the Farmer correspondent he said:

"I started in with 16 head of Shropshire ewes, for which I paid $96, or $6 per head. They were good sheep and I bred them to the best bucks obtainable. That was a good price for sheep when I bought them seven years ago, for sheep were very low in price then as compared with prices now. I sold all the buck lambs for $10 each and kept all of the ewe lambs. I kept account of all the sales of lambs, wool and mutton. I kept the sheep four years, selling them in February, 1915, at auction sale. They brought the highest price ever paid in this section at that time, for they were a fine lot. The prices paid for them ranged from $10 to $12.50 at the auction sale held in February. A few of the ewes that had lambs at their side then brought $12.50 each. After the sale I figured up what they had brought at the sale and what I had received for buck lambs and wool and the total was a little more than $1000.

"That was the receipts from an investment of $96 in four years. I feel that the sheep cost me nothing to keep as they lived on what would otherwise have been wasted and kept the farm clean of weeds and foul growth. While the returns seem large, they are very small to what they would have been had I kept the sheep until now. They would have brought enough now to have bought one of the best farms in Wallowa county. I sold them three years ago because I gave up the lease on the land I had and planned to quit farming. My one mistake was in not staying with the sheep and the farm a few years longer and I would have been independent and the greater part of my wealth would have been made from the sheep."

The writer was at the sale of Mr. Smith's property and remembers the comments on the "high" prices paid for the sheep, which were an exceptionally fine lot, not registered, but practically pure bred Shropshires. Some of the ewes sheared as high as 16 pounds of wool and one of them weighed 240 pounds, and most of them would weigh over 200 pounds. They had been bred up from very ordinary ewes by the use of purebred, large-sized bucks and were just the kind of sheep for farmers. —J. E. N.

Veterinary

Dr. S. B. Nelson

Cut Feed Down.—It there any help for a 10-year-old horse that passes water as thick as a thin syrup?

J. J.

Give your horse two tablespoonfuls of artificial Carlsbad salts on its feed morning and night. Give him one teaspoonful of Lugols' solution of iodine in his drinking water at noon. Cut his feed down one-third.

Lambs Cough.—This spring our lambs began to cough and had a discharge from their noses, the wool slipped and they did not grow as well as the rest. Now some of the ewes have the cough. They have running water all the time and a large pasture. J. A. B., Elgin, Ore.

I would rather be of the opinion that your sheep are affected with one of the forms of lung worm. You might try placing the lamb and the sheep in a closed room and allow them to breathe sulphur fumes which originate in the following manner:

Place a tub in the center of the room with two inches of water in it and a few bricks. On this put a pan of sulphur. Set fire to the sulphur and close the room and let the lambs and ewes breathe the sulphur fumes for some time. Then turn them out doors quickly. If you desired you could do this on a few and see how it works for you. I would, however, believe that the better thing for you to do is to consult either your veterinarian at Corvallis, Ohe., at the station, or your state veterinarian at Salem, Ore., and if necessary let either of them make a post-mortem to see really what the trouble is, and they will give you advice.

Bloody Milk.—I have a cow that gives bloody milk; at times it is badly caked. There seems to be something the matter with one quarter of her udder, the milk flows from the teat freely, but comes into it very slowly. Would a milk tube help this latter trouble?

A. B. S., Bliss, Idaho.

For the bloody milk give your cow one teaspoonful of sodium hyposulphite in one pint of water once daily, and for the inflammation I would offer the following treatment:

First, I must suggest that the treatment mammitis is a serious matter, and takes considerable time on the part of some one, owner or employe.

It requires the frequent bathing of the udder with hot water, in which has been dissolved a handful of common salt. This pailful of water should be as hot as possible without burning the animal. Wash the udder until the water is cool, then rub dry and apply a little of the following liniment: Fluid extract of bellodonna, 2 oz.; fluid extract of phytolacca, 2 oz. Then massage. The application of this medicine should not be severe. In bad cases it is advisable to give from a teaspoonful to a tablespoonful of the fluid extract of phytolacca morning and evening.

Sometimes it becomes necessary to poultice the udder. Take about five yards of 7c to 9c unbleached muslin, tear the ends into strips and tie these over the loins, so that the udder is supported in this bandage. Cut four holes where the teats of the udder should come through. Now fill in the poultice made of dried hop leaves. The leaves should first be pulled apart, then soak with hot water. In order to keep the poultice hot I have found that a Chinese hand warmer is very fine. This is a small tin box in which tinders made of charcoal, rags, etc., may be burned, and which when wrapped up in a piece of cloth and placed in the poultice, so as not to burn the cow, will keep the poultice warm from two to three hours.

Frequently it is advisable to give the animal at the beginning of the treatment one pound of Epsom salts in about two gallons of water.

Confiscated Liquor.

Destruction of confiscated liquor, which has been a duty of peace officers since Washington adopted prohibition, will probably cease. Steps have been taken by Charles Hebberd, federal food administrator for Washington, to put to other uses the vast quantity of liquor seized by the peace authorities. Mr. Hebberd has received a telegram from the United States food administration advising that the matter has been submitted to the war department. Mr. Hebberd has asked sheriffs, chiefs of police and prosecuting attorneys not to destroy any more liquor until he receives further advices from Washington.

Move to Spokane.

S. A. Jones, for several years a resident of Bonners Ferry and the lessee of the Keinholz ranch in Paradise valley has left with his wife for Spokane where they expect to make their future home. Mr. Jones sold his stock and farm implements to W. T. Kuntz.

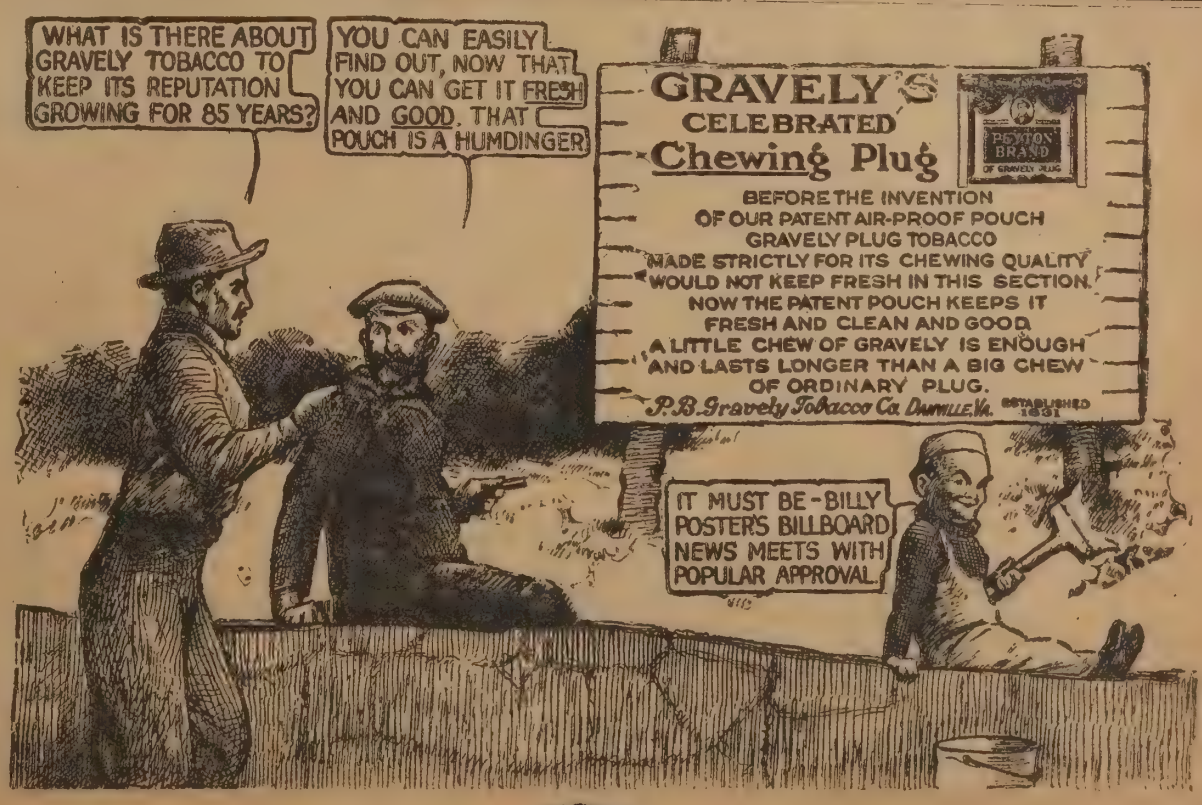
This is the Kind of Horse the Government Wants

No horse with a Spavin, Splint, Ringbone, Curb, Bony Growth, Capped Hock, Wind Puff, Strained Tendon or Sweeny can now pass the keen-eyed Inspectors of the Government Remount Stations.

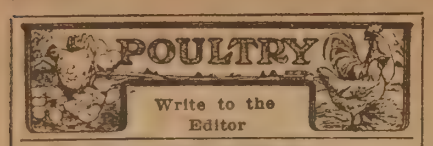
Splendid-looking horses—otherwise sound—are being turned down because of some blemish that could be quickly cured with

Gombault's Caustic Balsam

Here is your chance to make money for yourself and at the same time help in the Government's great Thrift and Production movement.



Put your horse into condition with **Gombault's Caustic Balsam.** A safe and reliable remedy.



Gombault's Caustic Balsam if applied immediately after burns, bruises or cuts, is a perfect ant-septic—soothing and healing. An absolutely safe external remedy for man or beast.

Every bottle of **Caustic Balsam** sold will surely give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by parcel post with full directions for its use. Send for descriptive circulars, testimonials, etc.

JAMES DRYDEN
Editorial Contributor

Feeds and Feeding

There is no end to questions about feeding. Feeding may be one of the most important subjects in poultry-keeping, and yet it may be easily mastered. We do not know all about different foods and different methods, but enough to know, if the knowledge is only applied, to enable the poultryman to get eggs in winter. He has to apply the knowledge faithfully and diligently. A great many fail in the application.

There are breed and breeding questions, and there are feed and feeding questions. It is not all in the feed any more than it is all in the breed. Breeding and feeding are just as important as breed and feed.

We may feed a balanced ration; that is a ration containing all the necessary foods for egg production, and not get 100 eggs in a year. But if we feed the same ration in a different way we may get 200 eggs. It is not enough to study feeds; we must study feeding as well.

Among the mistakes in feeding, I may mention the following: Irregularity is one of the worst. The poultry is often neglected on the farm. The farmer goes to town and does not get back in time to feed the fowls. They go to bed with an empty crop, and what food may be left in their digestive tract is drawn upon for bodily maintenance and there is none left to make eggs from. Next day to make up for the neglect the fowls are given a double dose, and a starve and an overfeed always means digestive disorders and slackened production. You might as well expect to make a record trip in an automobile across the continent with the engine "dead" half the time for lack of gasoline, as to expect the hen to produce profitably on irregular feeding. The feed is the fuel for the hen, just as the coal furnishes the steam for the steam engine. It is feed that furnishes heat for the body, and heat is life.

Feed also furnishes egg-making material, The egg can be made in no other way. The feed, which is the raw material, must be fed to the hen in order for the hen to make eggs. If the supply of raw material is not regular the output of eggs, which are the finished product, will not be regular.

Irregularity in feeding is one of the chief causes for the failure in egg production. Try this little experiment. If meat scrap has been fed regularly, cut it off all at once and give none for 10 days. The egg production will drop about half. Then start again to feed them all they will eat all the time and the hens will soon be out of condition; they will be in a serious plight and egg production will decrease further. There will be digestive disorders and sick hens. This would not be the fault of the feed, but the fault of the feeding—irregularity.

Another mistake in feeding which accounts for a great loss in eggs is in making radical changes in the ration. The hen is very particular as to what she eats; she is very suspicious of new feeds. The egg organs are very sensitive to environmental conditions and to changes in feed. Set the dog on the hens, or let the youngsters scare them, and there will be few eggs for several days after. Does the hen taste the food she eats? Bring up a hen on wheat as the grain food, then change all at once to yellow corn. She will not eat the corn until starvation stares her in the face. Then after she has learned to like yellow corn, give her half white corn and half yellow. She will eat the yellow and leave the white untouched. Feed her meat or beef scrap, then change all at once to fish scrap, and she will shun the fish scrap until after a few days she has satisfied herself in some way that the fish scrap is wholesome and perfectly harmless. Feed her beets for green food, then change to kale and it will be several days before she has finished her investigation of the plant and concludes to eat it, even though the egg-laying suffers seriously in the meantime. Is it a question of taste? If so, the sense of taste is very highly developed in the hen that will distinguish any difference in white and yellow corn, or will hesitate in eating kale through afterward she will eat it in preference to most any other kind of greens. Or is it a blind instinct that makes her suspicious of all foods until in some unknowable way she can satisfy herself that they are not poisonous?

"It is a fact that wild fowls refuse to eat poisonous seeds or plants, and the keeping of domestic fowls on the farm would probably be unprofitable if they did not possess the same faculty of telling what were poisonous and letting them alone. Whether the fowl's aversion to new foods comes from a natural instinct to protect herself against poisoning, or is merely a question of taste, getting accustomed to the taste of the food, the lesson to the poultry feeder is that he should not make a radical change in the feed if he wishes to keep up egg production.

The changes therefore should be made gradually, not radically. If the change is to be made from wheat to corn, start feeding the corn, but keep feeding wheat until the fowls apparently eat the corn as well as the wheat. Cut down on the wheat gradually and increase the corn gradually. By the end of a week or 10 days the full change can usually be made. It is the same with other grains or foods. If egg production falls off after a change of feed, it is more likely to be that the change was not made judiciously, rather than the fault of the new feed.

J. D.

Lice on Poultry

The body louse is probably the most injurious species on grown chickens, but it also infests young fowls, sometimes seriously, says a government expert. As it remains on the skin of the host, irritation is kept up constantly. Often a marked reddening of the skin of the fowl in the regions most heavily infested results and in some cases scabs and blood clots are formed. The eggs are deposited in clusters on the base of the feathers, usually being attached to the lowest barbs along the shaft. They are most abundant on the small feathers below the vent, where the masses of eggs sometimes become very large—fully half an inch in length. As the lice continually add eggs the masses are extremely large when seen several months after molting. In the case of young fowls the eggs are often deposited in numbers on down or small feathers and on hairs about the head and throat.

Sodium fluorid is one of the most effective remedies against the body lice of chickens, as well as other varieties

Mass of body louse eggs attached to a feather. Greatly enlarged.

of lice and chicken mites, according to experts of the department of agriculture. The methods of applying this remedy were given in the Farmer May 24 of this year. A portion of that article is here reproduced:

Sodium fluorid—say it plainly to the druggist or you may get sodium chlorid, common salt, which it not only resembles in name, but in appearance—may be obtained at most large drug stores.

To apply the material in dust form place it in an open vessel on a table and with one hand hold the fowl by the legs or wings. With the other hand place small pinches of the chemical among the feathers next to the skin, according to what is known as the "pinch" method, which proceeds as follows: One pinch on the head, one on the neck, two on the back, one on the breast, one below the vent, one on the tail, one on either thigh, and one scattered on the under side of each wing when spread. Each pinch can be distributed by pushing the thumb and fingers among the feathers as the material is released. If the chicken is held over the vessel the material which falls from the fowl during the operation is recovered.

Turkey Shipments.

Thanksgiving shipments of turkeys from Oakland, Oregon, this year have been close to 80,000 pounds, which, at close to 30 cents a pound, amounts to well up toward $24,000. The Christmas and New Year's shipments are expected to equal those of Thanksgiving. The shipments this year are just a little below the average, Roseburg being the only point in Douglas county that shows an increase. Oakland is said to be the third largest turkey shipping point in the United States and it has besides, large shipments of chickens and livestock. One day last summer a train load of 37 cars of sheep was shipped.

The Thanksgiving shipments of turkeys from the little town of Yoncalla, the other big turkey shipping point of Douglas county, amounted to close to $20,000. Chicken shipments for the year are estimated at $6000 and eggs close to $8000.

D. Hunting, one of the turkey shippers and growers, informs me that, while most of the turkeys used to be seen on the range, the practice is growing smaller each year, as farms and orchards have taken up much of the range. He says turkeys are naturally range birds, eating nearly any green thing, besides grasshoppers, crickets and other bugs.

Pruning

It is impossible to tell any one else how to prune; every one who knows or thinks he knows has an ideal of his own and is not likely to take kindly to any suggestions from others. Besides, different varieties of trees have different habits of growth and require different treatment.

Those that grow habitually with spreading branches should be treated differently from those that grow habitually with upright branches. Again, more depends on the age of the tree, and the soil conditions than most people generally suppose. If the soil is rich and the trees make a heavy wood growth they should not be pruned so heavily as if it is poor. If the soil is poor, and the wood growth light, a heavy pruning may be necessary in order to give strength to the remaining branches to develop commercial fruit.

But after all these things and many others are considered there are a few simple rules that may be observed with profit:

First—Cut out all dead branches.

Second—If two branches interfere with one another cut out the less desirable of the two.

Third—Cut out any branch that looks like it was infected with blight. It may not be so, but if it is diseased it is probably no good anyway, and if blight is the cause of the trouble it may infect other trees in the same orchard or extend to other orchards.

Fourth—Wherever branches are so clustered that the fruit will not color, thin them so as to let in the sunlight and give a natural color to the fruit.

Fifth—Cut close enough to the main branch so that the wound will heal. One of the mistakes of otherwise good pruners is in the fact that they leave stubs of branches that die, and later decay, and the decaying process extends into the main branch or trunk and hastens the trunk of the tree.

G. L.

Understanding the Tractor

What Is Horsepower?

The drawbar horsepower rating of a tractor does not mean the pulling equivalent of the same number of horses. For example, a tractor that develops a drawbar pull of 16 horsepower will only replace the work of about eight good farm horses. It is usually safe to divide the drawbar pull by two.

The customary unit of horsepower measure as applied to an engine or machine is equal to 33,000 foot pounds per minute. The rating of horsepower developed by a motor is obtained by means of a dynamometer or brake. This brake horsepower is the useful or commercial horsepower. It should equal the indicated horsepower of the engine multiplied by the mechanical efficiency of the machine.

The working ability of a horse is measured by its pulling power, which is called draft, and it is on this basis that traction engines are compared to horses.

The pulling power of the animal is given as one-tenth of its weight when working continuously 10 hours each day pulling some object at the rate of two and a half miles per hour.

Under these conditions a 1200-pound horse will develop but eight-tenths of a horsepower and a 1500-pound horse one horsepower.

Winter Sprays

This is a good time to spray for scale, provided the weather is not too cold. If it is not cold enough to freeze the spray while it the being applied, or soon after, it is a good time. However, any time after the leaves have fallen in the autumn and before the buds open in the spring, is a good time to spray for San Jose scale, but the sooner the attack is made on them the more easily they are killed, because the shell hardens with age. Besides, the winter spray, in a limited degree, kills a good many pests other than scales. Some of these pests are oyster shell bark louse; the eggs of aphis; red spider, and certain fungus diseases, like mill-dew, leaf curl; mosses; lichens etc.

However, if the trees are to be heavily pruned it will be more economical to wait until the pruning is done, before applying the spray. This may not be true in every case; it depends upon what the pruners do with their brush. If the brush is burned before the eggs hatch in the spring, the pruning should be done before the spraying, but there are certain insect pests, that hide in the bark, or that fasten themselves upon it, and eggs hatch from the brush soon after spring opens.

What Are the Winter Sprays?

There are two in general use, one is the lime sulphur; and the other is crude oil emulsion. The lime sulphur is a compound of sulphur, lime, and water, and has the following formula:

Sulphur flour or ground sulphur	1 pound
Good stone lime	½ pound
Water	½ gallon

I have given this in a small amount and the proportions can be multiplied according to the amount of spray used. This is the formula without the amount of water necessary in applying to the trees; it is the solution as it is sold in barrels.

The second spray that is gaining considerable popularity is the crude oil emulsion. This has the following formula:

Emulsifier.

Lye	2 pounds
Hot water	10 gallons
Fish-oil soap	20 pounds
Crude oil	20 gallons
Water to complete	200 gallons

This preparation has met with considerable popularity by those who have properly prepared it and proerly applied it. It has been said that in some cases it has burned the bark off the tree, but my observation is that this was because it was not roperly mixed, or perhaps not properly proportioned.

City Cares for Liberty Bonds.

Toledoans who hold Liberty loan bonds may have them stored and cared for free of charge by the city. The large vaults in the office of the city treasurer are available for that purpose, the mayor says.—Toledo News-Bee.

Be "U. S. Protected" For Winter Barnyard Tasks

When the ground is shrouded in deep snow and the thaws bring ankle-deep, oozy mixtures of mud and slush, keep your feet warm, dry and comfortable in U. S. Rubber Footwear.

Built for heavy service, double duty, this rubber footwear is impregnable to assaults of wet and cold—made to defy storm, sloughs and snags. Not only does greater comfort make this footwear most desirable, but sturdiness and long wear mean money saved.

Every pair bears the U. S. Seal—the trade mark of the largest rubber manufacturer in the world. Look for this seal, it is your protection. "U. S." is for sale everywhere. Your dealer has just the style you want or can quickly get it for you.

Italy Holds Ground

Germans Unable to Break Through

With the eyes of the world on her, Italy is apparently proving equal to the gigantic task thrust upon her by the combined German and Austrian forces when the chaotic conditions in Russia allowed Germany to withdraw troops from the Russian front and mass them against Italy. Violent attacks by the Teutons early last week compelled the Italian army in one mountainous section to give ground, but the latter recovered, checked the attack and later regained much of the ground lost. Other portions of the Italian line are remaining unshaken, and it begins to appear that the hope of the Germans and Austrians of being able to crush Italy and turn nearly all their power against the French and English in the north before the American army can make itself effective in actual battle is to be disappointed.

Peace Is Talked Again.

Germany is making what are termed peace overtures as a sort of Christmas package to the world. The allies, including this country, are in no mood to listen to those terms, for it is evident from early forecasts of them that they are terms based on an idea of German victory. It is expected that Germany will appeal to the world to place the blame for further bloodshed the coming year upon the allies, in view of the fact that they have rejected, as reject they will, the kaiser's offers of what he calls peace terms.

Red Cross Succeeds.

While Europe is in the throes of war, the people of America, aside from preparing to play their active part in that war, are rallying loyally to the American Red Cross with a view of alleviating some of the suffering. The great, nation-wide campaign for new members to the Red Cross appears to have attained its goal of about 10,000,000 new Christmas members. With the great and final day, the day before Christmas, remaining at this writing, the total of new members has exceeded 8,000,000. It is not now officially announced what the exact membership of the association is or has been, but it is understood that this great increase practically doubles the former roll. It means that nearly one person out of every five in the nation, men, women and children, is a member of the world's greatest humanitarian organization.

Russia Still Chaotic.

The possibility of Russia becoming so involved in civil strife as to break up into a number of separate and independent states or new nations is seen in the chaotic conditions of affairs in that country. Civil war is raging, and so-called leaders are springing up in many quarters to help carry on the factionalism of the distressed country. Owing to this condition, Russia seems no longer to be counted as of any consequence in this war. If she has any influence at all, it is not improbable that it will be advantageous to Germany rather than to her former allies, for through Russia Germany and Austria are about to be enabled to secure provisions to some extent.

Will Control Railroads.

President Wilson will ask congress immediately after the holidays for legislation giving him complete authority to control the railroad situation if it is found necessary for the government to take such action.

Argentina Is Aroused.

Further disclosures of treachery on the part of the German diplomats and high officers of the Argentine republic some time ago have caused the people of that country to protest vigorously, even to the extent of urging a declaration of war against Germany. The charges implicate the president of the republic in matters considered by many to be treasonable.

Will Protect Soldiers.

General Pershing, in charge of the American troops in France, has issued stringent orders prohibiting liquor or immoral institutions within reach of the soldiers under his charge. Leaders in the French and British armies have formally expressed high regard for the American soldiers and full confidence in General Pershing as their commander.

Krupp Works on Fire?

Unofficial reports declare the great Krupp gun works in Germany to be on fire and suffering severe damages. Whether this is true or not is problematical. This is Germany's chief munitions factory, but it is not to be believed that its partial destruction by fire would seriously handicap the war program of that country. The factory employed some 30,000 men before the war. This number is now probably largely increased.

Probe Military Affairs.

Charges having been made that those in charge of the military affairs of this country have been derelict in their duty and that the soldiers and sailors are inadequately equipped for duty are being made by a committee of congress. The investigation is based on charges that the war department is not rushing the manufacture and distribution of arms and ammunition as contemplated in the war appropriations measures passed by congress since the declaration of war. Conclusions from the hearings have not been officially drawn.

Sugar Buying Regulations.

Secretary of State I. M. Howell has thrown the full force of the weights and measures division of his office into the work of food regulation and conservation for the United States government.

The secretary of state has named Bert F. Snyder deputy superintendent of the weights and measures division, and a corps of eight inspectors to work with Charles Hebberd, federal food administrator for Washington, and the latter has designated these men from Mr. Howell's office as field agents in his department.

"It will be the duty of these agents to report any infractions of the licensing regulations and rules of the United States food administration," said Mr. Hebberd. "Furthermore, they will keep close tab on violations of the sugar regulations, and will see to it that retailers sell no more than one dollar's worth of sugar to individuals living in cities, not more than 25 pounds to farmers living at a distance from cities, and that hotels and restaurants purchase not more than a 10 day's supply. It will also be the province of the field agents to report immediately any slackening by hotels and restaurants of the observance of the wheatless Wednesday and the meatless Tuesday."

Finds Trouble in Hooverizing.

To the Editor of The Washington Farmer: We are asked to save the wheat for our allies and our soldiers by eating more corn and oats. We were doing this before the Hoover movement. However, people will not continue using corn and oats unless something is done to reduce the price. If the government can reduce the price of wheat why not the price of corn and oats? There is no good reason why corn and oats should be so high. Why should graham and whole wheat flour be higher than the best fancy patent?

Now, if we Hooverize, Uncle Sam will have to reduce or regulate the prices of substitutes for wheat flour. We have been having white bread only three or four times a week for the last four months, and I am pretty tired of the extra work of hot bread so often.

LOW PRICES FOR SPLE

FOR years farmers and farmers' organizations have urged the elimination of the middleman. They have realized that money could be saved through direct dealing between producer and buyer. Believing heartily in this principle, The Washington Farmer decided to test it out in its own business. We asked our readers to send in their subscription orders direct; pointing out that this would enable us to cut down our force of agents to a small number of men. Our friends were given the benefit of every dollar saved by this methed of handling subscription orders.

We are highly gratified with the way the new system is working out and we hope that every one who believes in dispensing with the middleman will help make this experiment a complete success.

The price of your state paper is lower as a result of our cooperative plan; but, as our readers will readily agree, the paper itself is getting better all the time.

The giant press shown on these pages is just one of the means we have adopted for giving you a more attractive, up-to-date and helpful home paper. When you are out to a social gathering or for a friendly call please think to mention The Washington Farmer.

Tell your friends and acquaintances that for a few cents a year they can get one of the best written and best printed of farm papers, and one that is edited with their interests always in view.

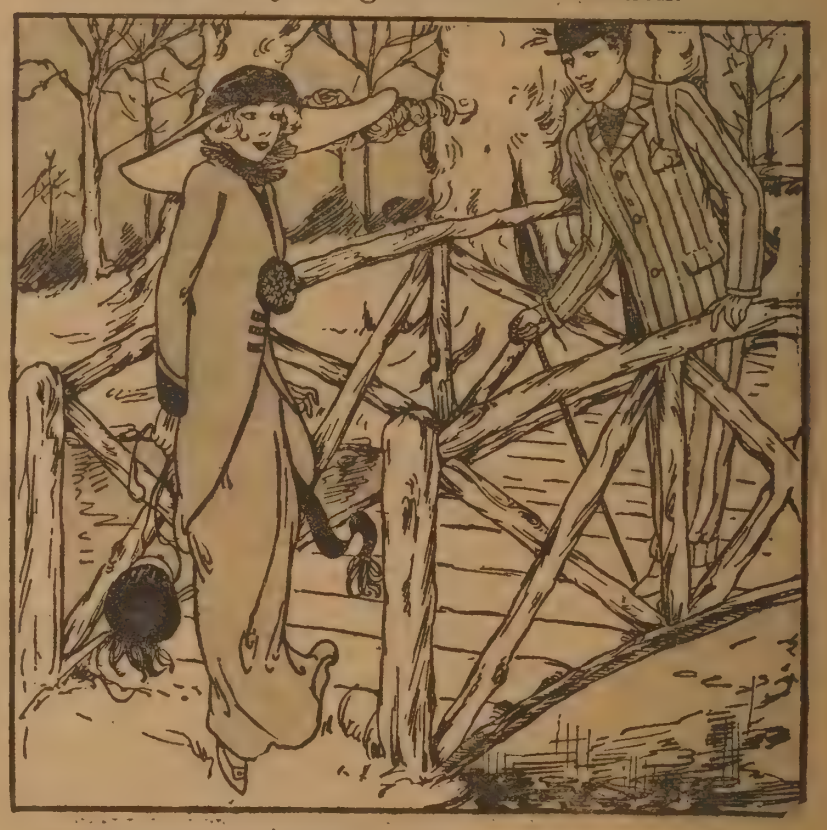
FLORA FLIRT—HER EYES JUST WON'T KEEP STILL



Flora Flirt in fine array
Went to walk on a windy day.

Her pretty bonnet, a French confection,
Made every one glance in her direction.

A "nice young man" then caught her eye
On a rustic bridge in the park nearby.

Make her eyes behave? Flo never can.
She smiles and flirts with that nice young man.

The wind just then, with fearful zest,
Blows off their hats. Flo's much distressed—

For after his hat the young man took,
While poor Flo's hat floats down the brook.
The Moral—The moral is this: To flirt I'd cease
If I couldn't hold on to my headpiece.

Meat Packers Are Under Fire

Livestock Industry Should Profit by Investigation

The federal trade commission is rendering the livestock industry immensely valuable service by turning the searchlight on the methods of the big packers. Already it has made sensational disclosures of high finance, dummy officers and sham trustees.

Establishment of ownership of the stock yards is only the first of the tasks before the commission, which plans to continue its investigation into every branch of the country's meat supply and the alleged control of the meat food of 100,000,000 people by five principal groups of packers. The commission's report will be made the basis for recommendations that additional legislation be enacted to remedy the situation, if found necessary, and any evidence of lawbreaking will be turned over to the department of justice.

The commission has employed the famous prosecutor, Francis J. Heney, as its special counsel, and he promises many startling disclosures.

Organization of the Chicago Stock Yards company, under the laws of Maine, alleged to have been for the purpose of providing a legal method for the payment of millions in "pickings" or rebates to the packing plants by the Chicago Junction Railways and Union Stock Yards company of New Jersey occupied Mr. Heney and the witnesses called at the first of a series of open hearings.

"The whole plan was an entirely transparent proposition," Mr. Heney told the commission, to "hide the real ownership and conceal the fact that Armour and other packers had an interest in the yards."

Mr. Heney says the packers control every stockyards in the country, but have concealed their ownership by stock transfers. If that is true, it throws a flood of revealing light on the reasons for the steady decline of the livestock industry in the United States. The government is trying to prove that the packers not only own the Chicago stockyards but the connecting railroad that links them up with all the other roads entering Chicago.

Given that combination it is easily seen that they could dictate the prices paid for hogs, cattle and sheep, and short-sighted, selfish interest would tempt them to make the prices so low that the industry would decline. They may be credited with sufficient shrewdness not to carry their greed to the point of completely destroying the industry, for in doing that they would destroy themselves. But there is a point of depression where scarcity of meats would enable them to shove up prices and increase their profits enormously.

It will be cause for rejoicing among stock-growers everywhere, from Montana to Mexico, that the government has put Heney on the packers' trail.

Horticulturists to Meet

A conference of horticulture inspectors is to be held at the State College of Washington, January 7-12, 1918. The following program has been prepared:

Monday, January 7.—Open Round Table, M. L. Dean in chair; "Fruit Diseases," Professor F. D. Heald.

Tuesday, January 8.—"Insects," Professor A. L. Melander; conference assembly; "Chemistry of Sprays," G. A. Olson; "Fruit Diseases," Professor F. D. Heald.

Wednesday, January 9.—"Insects," Professor A. L. Melander; conference; fruit, identification of varieties; "Fruit Diseases," Dr. F. D. Heald.

Thursday, January 10.—"Insects," Professor A. L. Melander; conference; assembly; 'Chemistry of Sprays," Professor G. A. Olson; "Fruit Diseases," Professor F. D. Heald.

Friday, January 11.—"Insects," Professor A. L. Melander; conference; fruit, identification of varieties; "Potato Diseases," Professor F. D. Heald.

Saturday, January 12.—"Insects," Professor A. L. Melander; conference; fruit, identification of varieties.

We Are Going Up Against Real Thing

(Continued from page four.)

shipped from state to state by the federal law. Mr. Nelson's final shot was, "Wait till after the war is finished and try to establish a new condensary, or try to put a new brand of milk on the market, and you will find out just what this law will do."

Among the resolutions passed at this session of the association, easily the first in the excitement which it created was that bearing on the importation of Chinese labor. As introduced and reluctantly fathered by Mr. McInnes, this resolution petitioned congress to exempt skilled farm labor, declaring that the very foundations of the dairy industry are threatened by the conscription of creamery workers and skilled milkers; and as a final remedy, to be used if all other resources fail, congress is petitioned to modify for the period of the war the Oriental exclusion act, to permit bringing in Oriental laborers in sufficient numbers to insure a maximum farm production, these laborers to be brought in under bond and sent back when the crisis in labor has passed.

Much heated oratory and some undeniably close decisions by the chair were interjected into the discussion preceeding the passage of this resolution, and at one time it seemed that a walk-out by the opponents of the measure must ensue. The volcano was temporarily covered over, however, and a semblence of harmony restored.

Another resolution adopted aims to put the responsibility for keeping shipments of meat from Sound ports in a sanitary condition on the shoulders of the dock and transportation companies, rather than to force the shipper to burlap his pork and veal. It was pointed out that the latter solution is one in appearance only, as new burlap is unobtainable at many shipping points, and the utility of using old sacking is more than questionable.

An anti-discrimination resolution, aiming to prevent discriminatory price making by a condensary maintaining plants at various parts of the country for the sake of breaking down opposition or competition at any local plant, was unanimously adopted, as were other resolutions denying that the farmers were not backing the Liberty loan campaign; backing the National Dairy council in its fight against colored oleomargerine; and providing a vote of thanks to the city of Sequim for its hospitality to the association.

William Bishop, one of the old guard in the association and a pioneer in both dairying and live stock breeding in the northwest, was elected president for the coming year. Mr. Bishop, in his address of acceptance, declared that farmers are the slackest of all workers in their backing of organization within their own ranks, and that for this reason alone they are constantly put to shame by organizations representing far less numerous and important occupations.

Unusual Bargain.

To The Washington Farmer: Herewith I enclose my check for $1 for an additional year to The Twice-a-Week Spokesman - Review and for the Washington Farmer. I feel that I can not afford to overlook the unusual bargain.

E. M. LESLIE.

Naches, Wash.

Old Coyote

Should Come Across With Cash

By GEORGE LARUE.

The time is due for you to make that old coyote come across with the cash for those hens he carried off last summer and fall. Don't give him any more days of grace than you can help, for he is prime now and his fur is needed by the boys that are preparing to fight for liberty and humanity, and fur dealers are offering extremely high prices for the long-furred animals.

In addition to high prices for their fur, and to stop their raids on poultry, pigs and sheep, and to the sport in catching them, they have spread the rabies, a very serious malady, over most of the northwest, thus endangering people as well as stock. There should be a bounty of not less than $5 for each one that is presented for the bounty. Stockmen and farmers should be making efforts to get rid of them. They are more difficult to trap after the snow comes than before, but can be trapped in the snow. The best meth- I know for amateurs is to set the traps in likely places when it is snowing and let them snow under, and to just go near enough to see that there is nothing in the traps until he gets something or the snow gets too deep over his traps.

Traps can be set and covered with snow, by using the blade of an ax or a thin, smooth board prepared for that purpose. Slip the ax or board under the top of the snow so the snow will be about three-fourths inches deep on the ax and lift the ax or board carefully so as not to break the surface of the snow and slant the blade and pull to you so the snow will slide off unbroken. Cover trap, chain, and all signs you have made and brush your tracks out as you leave the place. Coyotes are more afraid of signs than of human scent. I never wear gloves when setting traps except to keep my hands warm. On one occasion I set four traps and after dark, used a lantern making the sets, and next morning I had three coyotes, and many other times I have set traps late in the evening and next morning would have a coyote. But it is best to not go nearer the traps than necessary when trapping with most kinds of fur bearers commonly found in the United States.

The next time I will tell some of my experiences with lynx, fisher and martin, which is more limited than with coyotes, but none of them are hard to trap.

Farmers' Union at Davenport.

The Lincoln County Frmers' union will hold its annual convention at Davenport, Wash., January 8-9.

The following program has been arranged for:

Tuesday, January 8—Organization; appointment of committees; setting of special orders; other business; report of credentials committee; seating of delegates; reports of other committees; reports of locals; reports of officers; address, "The New Union," by Almer McCurtain; other business: open meeting, to which the public is invited, President J. S. Barbre, presiding; community singing, led by Miss Elvena Miller of the Davenport high school; selections by the high school chorus; readings by high school students; addresses by State President Elmore and Hon. C. E. Myers.

Wednesday, January 9—Reports of state convention; report fire insurance company; address by State President A. A. Elmore; address, P. C. T. Weisman; address by one of the professors from W. S. C.; other business; reports of committees; other business; election and installation of county officers; reading and approval of minutes; adjournment.

"Old Milyuns can't please his young wife any way he tries, and yet he lives only for her."

"Then let him try dying for her."—Baltimore American.

Not "Bit' but "Utmost"

Most Gigantic Task in Military History

The expression "do your bit" became popular in England when the war was still regarded as a storm that would soon blow over.

Then came the tragedy of Ypres with its appalling English losses, and England and her girdling commonwealths faced the grim truth, that the war was a life and death struggle with the autocratic power of Germany—that the invasion of Belgium was a violation of the good faith of nations—that imperial Prussia must be punished or her dogma of "might is right" would drive from the world those principles of democracy that now bind together the British empire.

A great people faced a great danger, and the trivialty of "doing one's bit" disappeared. Not one's bit, but one's utmost was demanded of every citizen of the United Kingdom.

Every nerve was strained toward that maximum efficiency necessary for victory—factories were put in high gear, the manufacture of luxuries curbed, ship building was speeded up, imports cut down, food waste reduced to a minimum, women substituted for men in factory and field—in short, every force was directed to the common end, the defeat of Germany.

England did not accomplish this reorganization in a day or a month; but day by day, as war became the prime factor directing all business, the simple purpose of the empire imposed itself upon the interests of the individual. The spirit of embattled England was emblazoned one day through the streets of London by women workers in munition plants.

This today is the imperative call of America to every citizen. "Drop every mortal thing and send them plenty of munitions, fuel, food and ships." Does personal business block the way? Sweep it aside, and stand by the soldiers, we owe them everything.

Not "bit," but utmost is our country's need. What is a "bit?" According to the dictionary the smallest quantity; a whit; a jot. Is a "bit" then the offering of America to a bleeding world? A "bit" the toll a patriot pays for the defense of the flag? A "bit" the price we pay for sons who give their all that we may live?

The war has reached a grave crisis. America's share grows ever bigger. The war zone stretches from San Francisco to Berlin. Every individual is personally responsible for holding that line. Our business now is war, and "doing one's bit" should have no place in our vocabulary or thought. America has undertaken the most gigantic task in military history, a task that calls for our utmost in strength and intelligence. Solidarity in America and unity of aims with our allies mean victory, and the guarantee, in all the ages to come, of human liberty and secure peace. The end is worth our all.

Flour and Feed Prices

Then Producer Takes His Wheat to the Country Mill

A writer asks publication of the following letter which he has addressed to Charles Hebberd, federal food administrator for Washington:

"I have a great many inquiries about the following prices of flour and feed, such as shorts and bran. The farmer receives only $1.85 net for his wheat at country flour mills. It takes four and a half bushels to make a barrel of flour. Allow four pounds for dirt per barrel, and the miller has one barrel of flour and 70 pounds of feed to sell. What is to be said in refuting this statement?

Cost of 4 1-2 bushels at $1.85	$8.32 1-2
Cost of milling per barrel	.75
Profit allowed	.25
Cost of four flour sacks	.20
Total cost to miller per bbl.	$9.52 1-2
He receives from the farmer per barrel	$10.50
He receives from the farmer 70 lbs. feed at $35	1.22
Total received	$11.72

"Or, in other words, he receives $2.20 more than he should be entitled to if he was held down to what the farmer has been."

The writer adds that he would like to have some miller explain this to the farmers.

That 25 Cents a Barrel

In this connection a correspondent writes from a town in eastern Oregon:

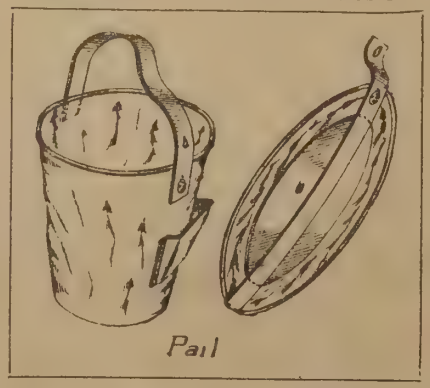
"I met here today the owner of a small, local flour mill. In the course of our conversation he complained of the injustice of the food administration order governing the profit of 25 cents a barrel on flour manufactured by millers. He contends that this ruling works a hardship on the small local miller, while at the same time it gives to the big millers a greater profit than they before enjoyed, and they were taking advantage of this extra profit in all new contracts.

"But here is the one point that particularly impressed itself upon me. This local miller does not deny that he is making from his flour profit more than 25 cents a barrel, but at the same time he is placing his product on the local market 70 cents cheaper than the big outside mills. He claims that the outside mills ship in and sell at $10.50, while he sells at $9.80 per barrel. He claims if he did not take more than the 25 cents profit he would have to shut down; but by continuing at a more than 25-cent profit he lowers the price to local consumers. Whereas, if the government compelled him to take only the 25-cent profit he can not possibly continue business, and, at the same time, to shut him down forces the public to pay 70 cents more for the outside product, all or either, he says, tending to work a hardship on local business and local consumers."

Holland's Farm Wages Advance.

News comes from Holland that farm wages have advanced much more than wages in other industries, the reason given is that other large industries have not, on the whole, made so great an increase of profits as the farmer.

For cutting (with a sickle) and binding wheat or oats the laborer received per hectare (2.47 acres) 35 to 40 florins ($14.07 to $16.08). Twenty years ago it is said 6 to 7 florins ($2.41 to $2.81) was considered good pay for similar work.

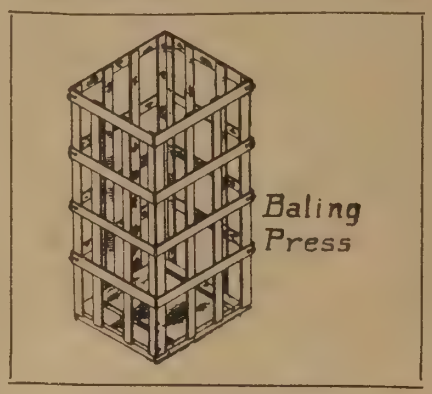


During the recent harvest an energetic farm laborer could make as much as 8 florins ($3.22) per day, and a man, his wife and two grown children could earn about 125 florins $50.25) per week.

Inventions

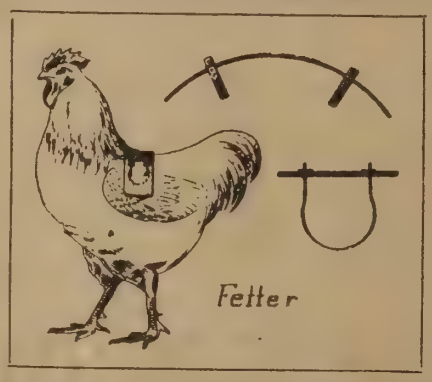
By C. J. LYNDE, Macdonald College, Quebec.

Occupies Little Space.



The bottom of this pail is made of wood, the top ring of iron, and the sides of canvas or ruber. It folds flat

and occupies little space in the carriage or car. The small pocket holds a sponge, wash cloth, or cake of soap. Make one for yourself.



Bale and Sell Old Newspapers.

The idea here is to use this crate for baling newspapers. A cord is run down each pair of opposite sides and across the bottom and the newspapers are piled in as they accumulate; when the crate is full the cords are tied and the baled package is lifted out. Get a small packing box and use this idea.

It Prevents Flying.

This fetter has two soft leather bands which are passed around the wing bones

and secured through holes in the curved wooden saddle. You could make one from a piece of wooden barrel hoop.

Sidelights

Only Wanted Facts.

They were having an argument as to whether it was correct to say of a hen she is "setting" or "sitting," and, not being able to arrive at a satisfactory conclusion, they decided to submit the problem to Farmer Giles.

"My friends," he said, "that don't interest me at all. What I wants to know when I hear a hen cackle is whether she be laying or lying."

A Mistake.

The other night
I went to the theater
With a lowbrow friend
And the orchestra played
"Little Brown Jug."
And he thought it was the national
anth m
And stood up,
And I did, too,
Darn him! —Arkansas Gazette.

Pity the Poor Grocer.

The grocer saw that his best customer was a bit ruffled over something, so strove to be extra obliging and pleasant.

"I think," he said blandly, "living's getting cheaper. For instance, a year ago them eggs would have cost you 5 cents more."

"A year ago," said the customer, "when these eggs were fresh, they would have been worth more."

Motorcycle From Bicycle.

A motor driven wheel that can be inserted in place of the front wheel of an ordinary bicycle to convert it into a motorcycle has been invented.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University)

Why Science Strives to Stop Boils Before They "Head"

Dr. Hirshberg.

To bring the tiny superficial pustule of a boil "to a head" is no longer the most widely used method for the riddance of boils. This way probably favors the inoculation of the surrounding skin. The germ is apt to get into other pores near the infected spot and many boils instead of one are likely to adorn the skin with red polka dots.

A boil is created for the most part by a pus-forming microbe, which often finds its way into a hair follicle, oil or sweat gland. If the huuman fabric is in perfect order and the scarlet fluid of the human structure is in proper combative condition, the germs are worsted in the fight and sent to eternal peace. If, however, the microbe, called staphylococcus pyogenes aureus, in any way gets the upper hand in the struggle because of conditions in the anatomy which favor it, the fighting corpuscles of the blood-flow are overcome and the poisonous germ sets up its abode in the form of a boil. The slightest irritation of the collar or a too hard rub after a hot bath is suficient at times to open the road to this pus-forming microbe. It is impossible, under conditions of overwork, worry, improper food or any form of illness to expect the red soldiers of the blushing stream of your blood to strike down the invaders.

The Newer Treatment.

According to the treatment for incipient boils, you first trace out the infected follicle or canal of the skin. When it is found you prick it with a red-hot needle or a galvano-cautery.

Another treatment offers the use of a crystal of pure carbolic acid melted on the end of a probe, and its pressure on a young boil with just a little rub. A very good way, however, is to prick the pustule and to clean the cavity with sterile cotton, after which a tiny pointed stick dipped into liquid carbolic acid is inserted.

A more simple way to treat them is exposure to the rays of the sun or of an incandescent electric light bulb. A 15-watt bulb placed close enough to produce comfortable warmth is an easy way out of all difficulty. The skin which surrounds the boil should be shielded with a green metal shade. The shade is not put on the skin, however, but upon the electric light, and should leave a single condensed streak of light which should be allowed to penetrate the boil. After this exposure the spot should be protected by means of a vaccination shield.

This method, the heat process, is easy and not dangerous. There is no outside surgical instrument to be applied. The spreading of boils over a larger surface of the skin is also prevented. The probability of extension of the trouble and blood poison from misapplied home remedies is also averted. When electric lights are available for the purpose it is inexpensive, needs little time and it is easy to employ.

An Alternative Method.

When the heat treatment is not handy the use of an electric battery and a fine needle is a good substitute. The needle is conencted with the negative pole of the battery, the current of which is increased graually from one or two milliamperes to 10. Hydrogen is thus liberated into the boil and pus or any other matter in the infected surface of the skin is carried away.

The needle is inserted into the boil and kept there by hand. This is easily done, since the hands are not needed for the generation of electricity and therefore are free. After about three minutes of generation of hydrogen from the negative pole of the battery you connect the needle with the positive pole and again insert it in the hole of the boil. A 10-milliampere current is turned on and you again apply the needle. Oxygen and ozone are liberated now and these disinfect the hole from any dangerous germs that may be present.

Then you reverse the current again and the hydrogen which now comes in washes out the dirt or waste material. If the treatment is repeated twice a day prompt subsidence and healing result.

Copyright, 1908, by Harper & Brothers.

SYNOPSIS.

Gale, trader, of Flambeau, has a beautiful daughter, Necia, and two half-breed children. Alluna, a squaw, is their mother. Lieutenant Burrel is sent to Flambeau to establish a military post. He and Necia become close friends. "No Creek" Lee, an unsuccessful miner, strikes a vein of gold. Stark comes to Flambeau to grubstake the miners and start a saloon. Runnion, a desperado, is his assistant. Stark's presence in the camp causes Gale and his squaw great uneasiness. Lee, Stark, Runnion, Gale and Poleon, a Frenchman, leave for the claim secretly so as to prevent a stampede. Necia hears of it, and, longing for riches so she may be as others girls, persuades Burrell to accompany her on a shortcut to the claim. Burrell, who is unpopular in Flambeau, chooses this means of beating the men at their own game. That night by the campfire Necia, realizing her peril, cautiously awakens in the lieutenant his slumbering conscience. They reach camp before the others the next morning and Necia stakes three claims. While Stark, Runnion and Poleon are locating Runnion makes some insinuations about Necia and Burrell. Poleon, who loves Necia, swears that either Runnion or Burrell will pay for them with his life. That night as Star is telling Necia a story a shot rings out and Gale jumps across the room shouting "My God! I've killed him." But the bullet misses Stark by inches. When Alluna hears of the affair she tells Gale that Stark is bullet-proof and gives him a knife, begging him to kill Stark as soon as possible. Burrell knows that he loves Necia, but, thinking she is a half-breed, he is afraid to marry her on account of what it would mean to his family, his position and his honor. One day as Necia is alone in the store Runnion tells her that he is wiling to marry her, even if the lieutenant has thrown her over and the story is being told on the street. Later Necia acknowledges to Poleon that while Burrell has sworn his love for her he has never spoken of marriage. She declares that she has never been unmaidenly, but that since the men are talking she will be married by Sunday, and that it may as well be to Poleon as anybody. They send for Burrell and Necia hides so that she may hear his answer for herself.

When Burrell enters Poleon wastes no time but asks him if he means to marry Necia. Maddened by the lieutenant's hesitation, Necia rushes out declaring she has played with him long enough, and that she is to marry Poleon on Sunday. Locked in his room through long hours of struggle Burrell finally realizes that Necia's love means more to him than all else. He finds her dressed in the black ball gown, her bare arms and neck gleaming in their whiteness. Not until after he has asked her to marry him does the revelation come to Necia that love means sacrifice. She refuses to spoil his future.

CHAPTER XIII.

Stark Takes a Hand in the Game.

The old man greeted the lieutenant affably, but as his glance fell on his daughter he stopped stock-still on the threshold.

"I told you never to wear that dress again," he said, in a dry, harsh voice.

The girl made no answer, for her heart was breaking, but turned and went into her room. Burrell had an irresistible desire to tell Gale that he wanted his daughter for his wife; it would be an unwonted pleasure to startle this iron-gray old man and the shawled and shambling mummy of red, with the unwinking eyes that always reminded him of two ox-heart cherries; but he had given Necia his promise. So he descended to the exchange of ordinary topics, and inquired for news of the creek.

"Necia's ground is getting better every hour," the trader said. "Yesterday they found a sixty-dollar pan."

"Have you struck pay on yours?"

"No; Poleon and I seem to hold bad hands. Some of his laymen are quitting work. They've cross-cut in half a dozen places and can't find a color."

"But surely they haven't fully prospected his claims yet; there must be plenty of room for a pay-streak somewhere, mustn't there?"

"It looks like he had drawn three blanks," said Gale, "although we can't tell for sure. They're breaking most as bad for me, too; but I've got a new hunch, and I'm running up a dreen to catch bedrock along the left rim. I've got 20 men at work and I'll know before long. You heard about Runnion, of course?"

"Yes; the usual story—the bad men get the good mines, and the good ones get the hungry spots. Well, I might have been one of the unfortunates if I had staked for myself; but I hardly think so, I'm pretty lucky." He laughingly bade them good night, content with himself and at peace with the world.

Gale went to Neica's door and called her, but when she appeared he was unprepared for the tragic face with which she greeted him.

"Daughter," he said, "don't feel bad over what I said; I didn't mean to be cross with you, but—I don't like that dress."

"Were you cross with me, daddy?" she said, dully. "I didn't hear. What did you say?"

He looked at her in amazement. "Neica, little girl, what is the trouble?"

She was staring past him, and her fingers were fumbling helplessly with the lace of her gown, but she began to show signs of collapse.

"I sent him away—I—gave him up, when he wanted me—wanted me——a daddy! he wants to marry me—and I sent him away."

Alluna utttered a short, satisfied exclamation, and, looking at Gale meaningly, said:

"It is good. It is good. He is a stranger."

But the man disregarded her interruption.

"He asked you to marry him in—in—in—in spite of who you are and what I am?"

"Yes, he is ready to give up his ambition, his army, his future, his family, everything, for me—to sacrifice it all: and so, of course, I couldn't let him. She spoke simply, as if her father would surely understand and approve her action, while in her voice was a

You needn't worry, little daughter. You needn't give him up, I say—this will end all right.

note of inevitable resignation. "You see, I never understood what my blood would mean to him until tonight. I've been selfish and thoughtless; I guess. I just wanted him, and wanted him to take me; but now that he is mine, I love him more than I thought. He is so dear to me that I can't drag him down—I can't—I can't!" She went to the open door and stood leaning against the casing, facing the cool outer darkness, her face hidden from them, her form sagging wearily, as if the struggle had sapped her whole strength.

Alluna crept to the trader and looked up at him eagerly, whispering:

"This will end in a little while, John. She is young. She can go back to the Mission tomorrow. She will soon forget."

"Forget! Do you think she can forget?"

"Any woman can forget. Only men remember."

"It is the red blood in you—lying. You know you lie."

"It is to save your life," she said.

"I know; but it's no use." To Necia he said: "You needn't worry, little daughter." But her ears were deaf. "You needn't give him up, I say—this will end all right."

Seeing that she gave no sign of heeding, he stepped closer, and swung her about till she faced him.

"Can't you trust me this one time? You always have before, Necia. I say he'll marry you, and it will all come out right."

She raised her hopeless eyes and strove gamely to meet his, then, failing, broke away, and turned back to the door. "I knew you couldn't understand. I—I—oh, God, I love him so!" With a cry like that of a wounded animal she fled out into the night, where she could give vent to her anguish unseen; for she had never wept before her father, but always crept away and hid herself until her grief was spent. Gale would have started after her, but Alluna dragged him back fiercely.

"No, no! It means your life, John. Let the secret die, and she will forget. She is so young. Time will cure her—time cures everything. Don't tell her—don't tell any one—and, above all, don't tell that soldier! He would not believe, nor would she. Even I have doubted!"

"You?"

"Yes, John. And if I don't believe, what is a stranger to say? No man knowing you would believe the tale—without proof. Suppose she doubted—have you ever thought of that? Would you not rather have her die still loving you than live and disbelieve?"

"Yes, yes! Of course, I—I've thought of that, but—woman, you're worse than a rattlesnake!"

"Even if he knew, he might not marry her. You at least are clean, and that other man was a devil. A brave man's life is too great a price to pay for a grief that will die in a year." Alluna was speaking swiftly in her own language, her body tense, her face ablaze, and no man seeing her could ever again have called her people stolid.

"You think time will cure a love like that?" he said.

"Yes, yes."

"That's all you know about it. Time may act that way perhaps in cities and such places, but out in the hills it is different. When you've got the breath of the forest in you, I say it is different. Time—why, I've lived 15 years in the open with a living memory. Every night I've dreamed it over, every day I've lived it through; in every campfire I see a face, and every wind from the south brings a voice to me. Every stormy night a girl with eyes like Necia's calls to me, and I have to follow. Every patch of moonlight shows her smiling at me, just beyond, just in the shadow's edge. Love! Time! Why, Alluna, love is the only thing in the world that never dies, and time only makes it the more enduring."

He took up the white slouch hat he had thrown down when he came in, and stepped to the door.

"Where are you going?" inquired the squaw, fearfully.

"To the barracks to give myself up!"

She flung herself at him with a great cry, and seized him about the waist.

"You never loved me, John, but I have been a good woman to you, although I know you were always thinking of her—and had no thought of me. I have loved this girl because you loved her. I have hated your enemies because you hated them, and now I remember while you forget!"

"Forget! What do you mean?"

"Stark!"

The man paused. "I did almost forget him—and after 15 years!"

"Let us kill him tonight; then we will go to the soldier together, side by side—I am your woman. Necia will look after the little ones."

Gale stared at her, and as he gazed the red pigment underneath her skin, the straight-hanging, manlike hair, the gaudy shawl she never went without, the shapeless, skin-shod feet, the slovenly, ill-fitting garb of a miscast woman vanished, and he saw her as she was on a day long past, a slim, shy, silent creature, with great, watchful, trusting eyes and a soul unspoiled. No woman had ever been so loyal, so uncomplaining. He had robbed her of her people and her gods. He had shifted hither and yon at the call of his uncertain fortune, or at a sign of that lurking fear that always dogged him, and she had never left his side, never questioned, never doubted, but always served him like a slave, without asking for a part in that other love, without sharing in the caresses he had consecrated to a woman she had never seen.

"By Heaven! You're game, Alluna, but there's a limit even to what I can take from you," he said, at last. "I don't ever seem to have noticed it before, but there is. No! I've got to do this thing alone tonight, all of it, for you have no place in it, and I can't let the little girl go on like this. The sooner that soldier knows the better." He leaned down and touched her brown mouth with his grizzled lips. "Thank you, Alluna, for making a man of me when I'd nearly forgotten. Now you stay here." He knew he could count on her obedience, and so he left her. When he had gone she drew the shawl up over her face and crouched in the doorway, straining her eyes after him through the dark. In time she began to rock and sway, and then to chant, until the night moaned with the death-song of her people.

Necia had no idea whither she went; her only thought was to flee from her kin, who could not understand, to hide under cover in some solitary place, to let the darkness swallow her up, so that she might give way to her grief and be just a poor, weak woman. So, with a dull and aching heart, she wandered, bareheaded, bare-necked, half-demented, and wholly oblivious to her surroundings, without sense of her incongruous attire or of the water that squeezed up through the soggy moss at her tread, and soaked her frail slippers. On she stumbled blindly through the murk like some fair creature of light cast out and banished.

The night was cloudy and a wind came sighing from the north, tossing the girl's hair and tugging at the careless folds of her dress, but she heard nothing save the devil's tattoo that rang in her head, and felt nothing beyond the pain at throat and breast, which in time became so bitter that the tears were wrung from her dry eyes, and she began to weep in a pitiful woman fashion, as if her heart would burst. The first drops cleared a way for others, and soon she was sobbing freely, alone and without solace, lost in the night.

She had not succeeded in thoroughly isolating herself, however, for a man who was steering his course by the sense of feel and the wind's direction heard her and paused. His steps were muffled in the soft footing, so that she had no warning of his presence until he was near enough to distinguish her dimly where she leaned against the log wall of a half-completed cabin.

To his question, "What's the trouble here?" she made no answer, but moved away, whereupon he detained her. "There's something wronk. Who are you, anyhow?"

"It's only Necia, Mr. Stark," said the girl, at which he advanced and took her by the arm.

What ails you, child? What in the world are you doing here? Come! It's only a step to my cabin; you must come in and rest awhile, and you'll soon be all right. Why, you'll break your neck in this darkness."

She hung back, but he compelled her to go with him in spite of her unwillingness.

"Now, now," he admonished, with unusual kindliness for him; "you know you're my little friend, and I can't let

Hintson "Making Over"

Some rainy day, when the usual duties are not pressing, take an inventory of the family wardrobe and see what can be done with the garments that are no longer fit for wear in their present condition, says Hazel Manning, in a bulletin of the extension service of the College of Agriculture, University of Wisconsin. A surprising number of ways to make over these garments will suggest themselves. There will be some shirts with worn places around the neck, some waists with holes under the arms, worn nightgowns and other white garments which always have a wealth of possibilities. Certainly there will be some woolen garments. Wool is scarce and, therefore, high priced, so all woolen clothing should be treasured.

Making Over Dresses.

Old clothes should be thoroughly cleaned and pressed before being made into new garments. Frequently two garments can be combined to excellent advantage. Good judgment, however, should be exercised in this matter or the wearer will soon become displased with the garment and cast it aside, thus wasting both the work and material required to make it. As a rule, silk is combined with silk and wool; and cotton with cotton wool or silk. The style of garment should correspond with the type of person who will wear it. The tall, slender woman should not be made to look too tall by the use of stripes and long lines. Neither should the stout person be made to look ridiculous in large plaids or ruffled skirts.

Color is an important item and the material should be held up to the face to see the effect of the light or shadow which will be reflected on the skin. It should always be remembered that soft white about the face will invariably give the best effect. A white collar not only reflects light on the features, but gives a neat, smart finish to almost any dress.

Military Style.

With the present vogue for military braid, a woolen skirt, after the belting and hem have been removed, may

Bringing 1915 up to date. An old pongee dress made into an attractive garment by the use of striped pongee as trimmings.

be washed, turned wrong side out and pressed and the raw seams covered with military braid. Thus a two, four or five gored skirt may be made attractive without the work of turning all the seams, says Hazel Manning, in a bulletin of the extension service of the college of agriculture, University of Wisconsin.

The Old White Skirt.

If the white skirt of three summers ago is too tight there are several ways in which it may be used. It can be drawn up to the shoulders and a Russian blouse, a style which is so popular this year, may be made of it. White materials are not hard to combine, so if the skirt does not furnish enough cloth for sleeves, collar, cuffs and belt, new material may be purchased. Another way is to draw the skirt up until it is full enough about the hips and let out the hem or put on a false hem of new material. A third suggestion is to put a yoke on at the top and wear the skirt with a long blouse of dainty tissue gingham, which is always fresh and cool looking. A faded summer dress of lawn could be dyed and used for a blouse.

"Wrong Side Out"—This frock was made from an old garment turned wrong side out. New material for the sleeves was the only money outlay.

Sugarless Marmalades

Now the papers are calling for 50-50 marmalades. The recipes below, though not of the 50-50 variety, reduce sugar to zero and introduce other surprises.

Prune Conserve.

Two dozen prunes, one-third pound raisins, two oranzes, one-third cup corn syrup, one-half cup water, one-fourth cup nut meats.

Dried apricots, peaches or canned plums may be used in this recipe. Wash and cut prunes in pieces; add chopped raisins and orange pulp and peel, cut very fine; then add corn syrup and water. Cook slowly until it is the consistency of marmalade. Add chopped nuts five minutes before removing from fire.

Carrot Honey.

Take one pint grated raw carrot, two cups white syrup and two lemons. Mix ingredients and add the grated rind of one lemon. Heat slowly and simmer the mixture until it is thick and clear. Turn into scalded jelly glasses and when cold cover with hot paraffin. Serve with cold meat or as a sauce for puddings.

At the End of the Rainbow.

The kaiser will find lead instead of gold at the end of the rainbow division.—Tuscaloosa News.

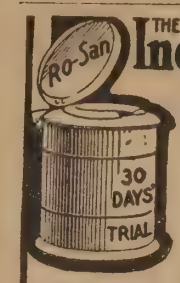
Be Fair to Children

By ELIZABETH QUAKER.

While visiting in a home one time I heard a father complain to his wife, "Our children are all liars." With true mother nature she denied that the children lied to her. This seemed a strange state of affairs to me, but the reason became very apparent.

Shortly after this same father opened the kitchen door and loudly demanded, "Who's had my new ax?" A little boy of 5 walked hesitatingly toward his father and said, "I never." "Who took it from the shop and left it in the woodshed?" cross-examined father. "I," admitted the boy, whereupon that father sharply slapped the boy several times upon the side of the head.

How much was this father encouraging the telling of falsehoods? Would he have stood up in front of a great domineering giant and admitted doing a misdeed if he knew the admission was sure to bring bodily pain to himself?



Mother would have shown boy the notches he had unintentionally made in the ax. Then something like this would have followed: "Now, son, get your cap and mittens and you will have to turn the grindstone for me to take out all these notches." During the grinding she would call his attention to the waste of time and labor he had caused.

Just the old theory of the "deed returning to the doer" is not bad when applied to the deeds of children.

When you find your children forming bad habits, look for the reason. Turn the searchlight on yourselves, too, and "play fair."

Aristocrat Sentenced to Prison.

KNOXVILLE, Tenn.—Rush Strong, member of one of east Tennessee's wealthiest and most aristocratic families, who was convicted of shooting and killing Sam B. Luttrell, prominent club member, on June 3, 1916, must serve from two to 10 years in the penitentiary.

THE ORIGINAL CHEMICAL
Indoor Closet
30,000 SOLD—FIFTH YEAR
More Comfortable, Healthful, Convenient

Eliminates the out-house, open vault and cess-pool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

ABSOLUTELY ODORLESS
Put It Anywhere In The House

The germs are killed by a chemical process in water in the container. Empty once a month. No more trouble to empty than ashes. Closet absolutely guaranteed. Guarantee on file in the office of this publication. Ask for catalog and price

Handicraft For Boys

By A. Neely Hall.

Holiday Fun With Shadows.

Every boy likes to give home entertainments, and probably the best time of the year is right now during the holidays when grandmother and grandfather have come to visit, and an appreciative audience is at hand. There are so many things for a boy to do during this vacation, however, that there is little time to prepare an entertainment, so I shall show you how to give a shadow exhibition, as this can be arranged in a short time.

It requires only a few minutes to get the knack of shadow making, and after you have tried out the forms in the accompanying illustrations you will find it easy to devise others.

The shadows must be cast upon a sheet, and the audience must be seated on one side of this, and the operator stand on the other side. It is best to hang the sheet in a doorway so the light by which the shadows are made can be confined to the screen, because the room in which the audience are seated must be dark. By hanging a dark cloth over the upper and lower portions of the doorway the area of the picture screen can be reduced to just the size necessary, and the covered lower portion will conceal the shadow of the boy performer's body (Fig. 1). The light for projecting shadows must be placed about five feet in back of the screen.

Rabbit Shadow.

Figs. 1 and 2 show a rabbit shadow, and how the hands are held to produce it. Interlock your little fingers, then slide the back of your left hand over on to the back of your right hand. Form the nose and head by doubling

back the first finger of the left hand, and the ears by extending the second and third fingers, and extend the thumb and the first three fingers of the right hand for the feet. By wiggling the first finger the rabbit can be made to nibble.

Alligator Shadow.

The alligator shadow (Fig. 3) is a one-hand shadow made with the aid of two pieces of cardboard notched along their edges to form teeth (Fig. 4). Fig. 3 shows how the teeth are held be-

tween the extended fingers, and how the alligator's eye is formed by light passing through an opening between the first and second fingers. With your free hand give the alligator things to eat. His eating will greatly amuse your audience. With modifications, a snake's head can be formed, with your arm extended for its body. Give the snake an apple, and show this bulging through its back as it passes along its body.

Fig. 5 shows a wolf's head, and Fig. 6 a donkey's. Both are formed by placing the palms of the hands together, with thumbs up for ears, the first fingers drawn in for the forehead, and the little fingers dropped for the lower jaw. These shadows are a good example of how different figures are produced by extending or bending the fingers.

The duck's head (Fig. 7) is a simple one-hand shadow. By dropping and raising the little finger the duck ap-

pears to open and close its bill. It can be made to snap at flies very naturally.

Santa Claus' profile (Fig. 8) requires a cardboard hat (Fig. 9). The first finger forms the nose, the second and third fingers the lips, and a piece of cotton held between the third and fourth fingers makes the whiskers.

The man-with-a-pipe shadow (Fig. 10) has a cardboard hat and pipe (Fig. 11). The doubled first finger forms the forehead, the extended thum forms the nose and the third and fourth fingers form the mouth and chin. By extending or bending the fingers, other profiles can be made.

THE BARRIER

(Continued from page twenty.)

you go on this way; it's scandalous. I won't stand for it. I like you too much."

In truth he had done things during these last few weeks to make her think so, having never missed an opportunity to stop and pass a word with her, at the same time showing her a queer courtesy and consideration quite foreign to his saturnine habits. She had never mentioned the fact to her father or the others, for she had developed a sort of sympathy for the man, and felt that she understood him better than they did.

He led her inside his cabin, and closed the door in the face of the night wind before he struck a light.

"I can't stand to see you cry," he repeated, as he adjusted the wick. "Now, as soon as——" He stopped in astonishment, for he had turned to behold, instead of the little halfbreed girl, this slender, sorrowful stranger in her amazingly wonderful raiment.

"By——" He checked himself insensibly, and stood motionless for a long time, while she wiped her eyes and, woman-like, straightened out her gown and smoothed her hair with little feminine touches.

"I—I—hope you'll excuse me for acting this way," she smiled at him, piteously; then, observing his strange features, "Why, what is the matter, Mr. Stark; are you angry?"

His hawklike face was strained and colorless, his black eyes fierce and eager, his body bent as if to pounce upon a victim. In truth he was now the predatory animal.

"No," he replied, as if her question carried no meaning; then, coming to himself, "No—no! of course not, but—you gave me a start. You reminded me of some one. How do you come to be dressed like that I never knew you had such clothes?"

Poleon brought them from Dawson; they are the first I ever had."

He shook his head in a slow, puzzled fashion.

"You look just like a white girl—I mean—I don't know what I mean."

This time he roused himself fully, the effort being more like a shudder.

"So I have always thought," she said, and her eyes filled again.

"Your skin is like milk beneath your tan, and—I don't mean any disrespect, but—— Well, I'm just so damned surprised! Come over here and sit down while I mix you something to put the heart back into you."

He shoved forward a big chair with a wolf-skin flung over it, into which she sank dejectedly, while he stepped to the shelves beside the Yukon stove and took down a bottle and some glasses. She glanced about with faint curiosity, but the interior of the cabin showed nothing out of the ordinary, consisting as it did of one room with a cot in the corner, upon which were tumbled blankets, and above which was a row of pegs. Opposite was a sheet-iron box stove supported knee-high on a tin-capped framework of wood, and in the center a table with oilcloth cover. Around the walls were some cooking utensils, a few cases of canned goods, and colthes hanging in a row.

"I'm not fixed up very well yet," he apologized; "I've been too busy at the saloon to waste time on living quarters. But it's comfortable enough for an old roadster like me, for I've bruised around the frontier so long that I've learned there's only three things necessary to a man's comfort—warm clothes, a full stomach and a dry place to sleep. All the rest that goes to make a man content he has inside him, and I'm not the kind to be satisfied, no matter where I am or what I have. I never was that kind, so I just don't make the attempt."

He was talking to give her leeway, and when he had concocted a weak toddy, insisted that she must drink it, which she did listlessly, while he rambled on.

"I've noticed a few things in my life, Miss Necia, and one of them is that it often does a heap of good to let out and talk things over; not that a fellow gains any real advantage from disseminating his troubles, but it serves to sort of ease his mind. Folks don't often come to me for advice or sympahty. I don't have it to give, but maybe it will help you to tell me what caused this night-marauding expedition of yours." Seeing that she hesitated, he went on: "I suppose there's a lot of reasons why you shouldn't confide in me—I don't like that old man of yours, nor any of your friends; but maybe that's why I'm interested. If any of them has upset you, I'll take particular pleasure in helping you get even."

"I don't want to get even, and there is nothing to tell," said Necia, "except a girl's troubles, and I can't talk about them." She smiled a painful, crooked smile at him.

"Your old man has been rough to you?"

"No, no! Nothing of that sort."

"Then it's that soldier?" he quizzed, shrewdly. "I knew you cared a heap for him. Don't he love you?"

"Yes! That's the trouble; and he wants to marry me; he swears he will in spite of everything."

"See here! I don't quite follow. I thought you liked him—he's the kind most women go daffy over."

"Like him!" The girl trembled with emotion. "Like him! Why—why, I would do anything to make him happy!"

"I guess I must be kind of dull," Stark said, perplexedly.

"Don't you see? I've got to give him up—I'm a squaw."

"Squaw hell! With those shoulders?"

Stark checked himself, for he found he was rejoicing in his enemy's defeat, and was in danger of betraying himself to the girl. In every encounter the young man had bested him, and these petty defeats had crystallized his antipathy to Burrell into a hatred so strong that he had begun to lie awake nights planning a systematic quarrel. For he was the kind of man who throve upon contentions: so warped in soul that when no man offered him offense he brooded over fancied wrongs and conjured up a cause for enmity, goading himself into that sour, sullen habit of mind that made him a dread and a menace to all who lacked his favor. His path was strewn from the border north with the husks of fierce brawls, and he bore the ineradicable mark of the killer, carrying always in his brain those scars that hate had seared. In his eyes forever slumbered a flame waiting to be blown to life, and when embroiled in feuds or bickerings a custom had grown upon him to fight these fights in secret many times, until of nights he would lie in solitary darkness, writhing in spirit as he hounded his man to desperation, or forced him into a corner where he might slake his thirsty vengeance. After such black, sleepless hours he dragged himself from his battlegrounds of fancy, worn and weary, and the daylight discovered him more saturnine and moody, more menacing than ever.

He had brooded over his quarrel with Gale and the lieutenant ever since their first clash, for in this place they furnished the only objects upon which his mania could work—and it was a mania, the derangement of a diseased, distorted mind. His regard for Necia was a careless whim, a rather aimless, satisfying hobby, not at all serious, entirely extraneous to his every-day life, and interesting only from its aimlessness, being as near to an unselfish and decent motive as the man had ever come. But it was not of sufficient consequence to stand out against or swerve the course of a quarrel; wherefore, he was gladdened by the news of Burrell's discomfiture.

"So you like him too much to stand in his way," he said, meditatively. "How does your father look at it?"

"He wants the lieutenant to marry me. He says he will fix it up all right; but he doesn't understand. How could he?"

"You are doing just right," concurred the man, hypocritically, "and you'll live to be glad you stood out." Now that both his enemies desired this thing, he was set on preventing it, regardless of the girl. "How did the lieutenant take it when you refused him?"

"He wouldn't take it at all. He only laughed and declared he would marry me, anyhow. The very thought thrilled her.

"Does he know you love him?"

The tender, sobbing laugh she gave was ample answer.

"Well, what's your plan?"

"I—I—I don't know. I am so torn and twisted with it all that I can't plan, but I have thought I—ought—to go—away."

"Good!" he said, quickly, but his acquiescence, instead of soothing her, had the contrary effect and she burst out impulsively:

"Oh—I can't—I can't! I can't go away and never see him! I cant' do it! I want to stay where he is!" She had been holding herself in stubbornly, but at last gave way with reckless abandon. "Why wasn't I born white like other girls? I've never felt like an Indian. I've always dreamed and fancied I was different, and I am, in my soul—I know I am! The white is so strong in me that it has killed the red, and I'm one of father's people. I'm not like the other two; they are brown and silent, and as cold as little toads; but I'm white and full of life, all over. They never see the men and women that I see in my dreams. They never have my visions of the beautiful snow-white mother, with the tender mouth and the sad eyes that always smile at me."

"You have visions of such things, eh?"

"Yes, but I came a generation late, that's all, and I've got that other woman's soul. I'm not a half-breed—I'm not me at all. I'm Merridy—Merridy! That's who I am."

Her face was turned away from him, so that she did not notice the frightful effect her words had upon Stark.

"Where did you get—that name?" His voice was pitched in a different key now. Then, after a moment, he added, "From the story I told you at the mine that night, I suppose?"

"Oh, no," she answered. "I've always had it, though they call me Necia. Merridy was my father's mother. I guess I'm like her in many ways, for I often imagine she is a part of me, that her spirit is mine. It's the only way I can account for the sights I see."

"Your father's mother?" he said, mechanically. "That's queer." He seemed to be trying to shake himself free from something. "It's heredity, I suppose. You have visions of a white woman, a woman named Merridy, eh?" Suddenly his manner changed, and he spoke so roughly that she looked at him in vague alarm.

"How do you know? How do you know she was his mother?"

"He told me so—"

Stark snarled. "He lied!"

"I can show you her wedding-ring—I've always worn it." She fumbled for the chain about her neck, but it eluded her trembling fingers. 'It has her name in it—From Dan to Merridy.'"

Stark's hand darted forward and tore the thing from her shoulders, then he thrust it under the lamp and glared at the inscription, while his fingers shook so that he could barely distinguish the words. His eyes were blazing and his face livid.

Necia cried out, but he dropped the ornament and seized her fiercely, lifting her from the chair to her feet, then, with one swift, downward clutch, he laid hold of her dress at the left shoulder and ripped it half to her waist. A hoarse sound came from his

(Continued on page twenty-seven.)

Patterns

1944—Girls' one piece dress. Cut in four sizes: 2, 4, 6 and 8 years. Size 8 will require 2 3-4 yards of 44-inch material. Price, 10 cents.

1990—Ladies' apron and sleeve protector. Cut in four sizes: 34, 38, 42 and 46 inches bust measure. Size 38 requires 5 yards of 36-inch material for the apron, and 3-8 yard for he sleeve protector. Price, 10 cents.

2146—Ladies' kimono or lounging robe. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium will require 7 yards of 36-inch material. Price, 10 cents.

2177—Ladies' maternity skirt. Cut in seven sizes: 24, 26, 28, 30, 32, 34 and 36 inches waist measure. Size 26 requires 3 7-8 yards of 44-inch material. The skirt measures about 3 yards at the lower edge. Price, 10 cents.

2225—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 6 1-8 yards of 4-inch material. The dress measures about 2 7-8 yards at the lower edge, with plaits drawn out. Price, 10 cents.

2292—Girls' dress with cape. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 requires 5 1-2 yards of 44-inch material. Price, 10 cents.

2294—Girls' dress. Cut in four sizes: 2, 4, 6 and 8 years. Size 8 requires 3 1-4 yards of 44-inch material. Price, 10 cents.

2304—Dress for misses and small women. Cut in three sizes: 16, 18 and 20 years. Size 16 requires 4 3-4 yards of 44-inch material for the dress and 1 3-4 yards for jumper. The skirt measures about 2 7-8 yards at the foot, with plaits drawn out. Price, 10 cents.

2308—Ladies' shirt waist. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 3 yards of 36-inch material. Price, 10 cents.

2310—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 10 requires 3 3-4 yards of 44-inch material. Price, 10 cents.

2321-2319—Ladies' costume. Waist 2321 cut in sexen sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2319 cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It will require 9 yards of 44-inch material for the entire dress for a 36-inch size. The skirt measures about 2 5-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2323—Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. Size 10 requires 3 3-8 yards of 4-inch material. Price, 10 cents.

Prevents Molding.

Pantry shelves shold be washed clean and then dried. The undue use of water should be avoided, as mosture encourages molding.

Steamed Carrot Pudding.

The following makes a very delicious pudding, a good substitute for plum pudding and less expensive. It will keep for several days:

1 cup grated raw carrots.
1 cup dry bread crumbs.
1 cup beef suet.
¾ cup sugar.
¾ cup well chopped raisins.
½ cup flour.
2 teaspoons salt.
2 teaspoons cinnamon.
½ teaspoon ginger.
½ teaspoon grated nutmeg.
2 tablespoons chopped candied orange or lemon peel.

Mix all together; add enough cold water to make stiff mixture; grease your molds or bowl with drippings; cover and steam for three and a half hours. This is served with lemon sauce; may be reheated in the usual way.

Lemon Sauce.

Add to a cup of boiling water a tablespoon of cornstarch which has been mixed with cold water. Boil until clear, which will be from three to five minutes; add two tablespoons of lemon juice, half a teaspoon of caramel and pinch of salt.—G. P. F.

Good Old-Fashioned Raisin Bread.

3 cups graham flour.
5 teaspoons good baking powder (Royal or Crescent).
1½ teaspoons salt.
¼ cup sugar.
1½ cups milk and water.
1 cup raisins washed, dried and floured.

Mix the flour, baking powder, salt and sugar well, add the milk and lastly the raisins; turn into a greased loaf pan; let rise 30 minutes in a warm place; bake slowly from 35 to 45 minutes. Nut meats may be used instead of raisins, or they may be mixed. This makes a very delicious bread for lunches for school children; may be spread with a little jelly.—G. P. F.

Popcorn Balls.

1 cup molasses.
3 tablespoons brown sugar.
1 tablespoon vinegar.
1 tablespoon butter.

Boil till it hardens when dropped in cold water.

Pour this over two quarts of freshly popped corn; mix well, and with the hands press them into small balls.—Contributed.

New Pencil Holder.

For persons using pencils almost continuously a clip has been invented to hold one on the back of the left hand momentarily when the right hand is occupied for other work.

Time—Money

Every day of delay in beginning a business education is a loss of money.

November is at hand. Begin now.

Stenography, Typewriting, Bookkeeping, Penmanship, Banking—these are all money earners.

Begin your winter's work.

Northwestern Business College

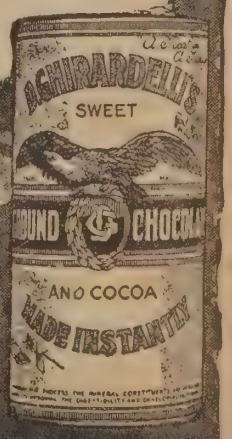
Spokane's Accredited Commercial School.

M. M. HIGLEY, President.

8317 Howard st., Spokane, Washington.

"—use foods that require less sugar"

THIS is one of the most important recommendations of the Food Administrator: "In cooking and baking use foods that require *less sugar*."



In other words—use Ghirardelli's. Use it freely and wisely—in place of other less nutritious and more expensive foods. Not only will you save money but you will help in food conservation.

Cooking and baking require less sugar when you use Ghirardelli's. Because—it contains in itself the sweetening flavor you need. More than this—it adds a new touch of richness to your icings, your puddings and other desserts.

In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.

D. GHIRARDELLI CO.

Since 1852 San Francisco

Ghirardelli's Ground Chocolate

New Year Bells

By AUNT NELLIE.

"I want to ring the bell at the Methodist church, and I'm going too," announced Sally Lane, nodding her small head until her two tow pigtails bobbed up and down like corn tassels in a gale.

"Now, Sally," remonstrated her brother, "girls don't ring bells on New Year's eve. You can't, that's all."

"Why can't I, I'd like to know? I can ring a bell just as loud as you can, Mister Bobby, and just as long as you, too. If you don't let me go and ring, I'll ask mother mayn't I."

"Don't do that, Sally. She wouldn't let you go and you know it, and maybe she wouldn't let me go, either. It just isn't girls' work."

"Well, what do you do that's so hard?" demanded Sally.

"Why, you have to sneak down the alley—"

"Huh! I can do that."

"—and climb over the board fence so nobody will see you—"

"I can do that."

"—and then you have to crawl through the window at the church—"

"I can do that—I've done it lots 'n lots of times."

"—and maybe the night watchman will get after you and you have to run and get away or he'll put you in jail."

"I can run pretty near as fast as you can, and you know it. There isn't a single thing that you have to do that I can't do. I'm going to go and I'm going to sneak, and climb, and crawl, and run, just the same as you."

"All right, Sally," Bob sighed heavily. It was not the first time he had run against the obstinacy of his sister, and he could not recall a single time when he had succeeded in changing her intentions. "All right. You're bound to go, and I don't know what the fellows will say. But just remember that you've got to go to bed at nine and not go to sleep a single mite, and get up at 11 o'clock and dress and climb out of the window and down the shed roof and not make a bit of noise or pa'll hear you and maybe he wouldn't make you scoot!"

Assured of the victory, Sally did not press her advantage. "I'll help all I can, Bob," she said sweetly, "and I think it was just wonderful to think of dividing up and having all the boys see who can ring the longest and give the prize for the winners. But how are you going to keep old Snook away? He'll stop some of the boys, sure, and that won't be fair."

"I'll think of something. I always do," returnd Bob grandly but vaguely. For he was not very sure just how he was to keep the outwardly gruff old night watch from interfering with his plans.

It had always been a custom in the little village of Clyde for crowds of boys to penetrate the dim recesses of church belfreys and ring the bells till the sleepy neighbors ventured forth or the night watch stumbled up the steps after them and sent them flying. Old Snock embodied the law at night in Clyde, and his savage frown covered a jolly heart and a kindly soul. Parents, too, professed to look on bell ringing as a heinous offense, but usually they were awake when small feet scraped and rattled over back porches on New Year's eve and pretended not to hear.

"Tell you what let's do" said Bob one day "Let's choose up sides—three gangs for the three churches, and start at half past eleven and the crowd that rings the longest gets a prize."

The idea met with instant favor, the choosing was accomplished after much wrangling and the rules established. The leader was to ring first, followed by his first lieutenant, and so on. There was some difference in bells, as the Baptist church had the biggest bell, but by choosing smaller boys for the Presbyterian and Methodist churches. Bob preserved a solemn silence when it came to the prize and refused to tell what it was. And while he assumed confidence in the matter of handling old Snook, secretly he had not the slightest idea of how he would manage to keep that fearful individual embodying the law from interrupting the contest.

"Sh-sh! Sally! Are you ready?"

"Just a minute. Wait for me-e-e-e!"

"Can you get down all right?"

"Course,"—a scornful whisper.

"We seem to have two boys instead of a boy and a girl, mother," said Mr. Lane.

"Is Sarah going out with Robert?" said Mrs. Lane, starting up.

"Now, mother, just let the children have their fun. They won't do any harm."

In the meantime Sarah had successfully sneaked through the alley at Bob's heels and had scaled the high board fence, catching her skirt on a nail.

"Why didn't you wear your overalls?" growled Bob.

"I'm going as a girl," panted Sally as they joined the other children collected in the shadow of the schoolhouse.

"Who's Sally going with?" demanded Willie Livermore. "She's extra. And she can pull just as hard as anybody."

"Sally's going with me," said Bob, "and I'll just pull half my time." Good, old Bob!

The three groups slipped away with whisperings and giggles.

"What's that? Hush! Can't you be quiet?"

The booming town clock struck the half hour, and the children, with Bob darted toward the rear of the Methodist church. Bob, in advance, suddenly stumbled backward, and the crowd came to a stand.

"There's old man Snooks right under the window!" he gasped. "How are we going to get in, and there's the Baptist bell," he groaned.

"What are you going to do?"

"Listen, Bob," whispered Sally. "I'll go 'round in front and get Snooks out there and I'll talk to him till you get in and you nail down the window after you're in."

"Good girl!" murmured her brother, patting her on the back.

Sally darted away and the next moment from the front of the church came a shrill cry. "Help! Help!"

"Come an, boys," said Bob as they watched Snooks dash madly past them. "It's just Sally. She's getting him away for us. In with you!"

Up the long stairs the boys clambered and before the first echoes from the Presbyterian steeple had died away the Methodist bell boomed out.

"Sally said she would ring it, but she won't after all," he grunted.

Minute by minute sped by and still the three bells sang their song of peace and goodwill through the countryside. Midnight came and the ringing grew furious. Another quarter of an hour passed and still the boys labored on. Half past, and the last of the lads was exhausted, but still clung doggedly to the frayed rope.

"Let me in! Let me in!" came a faint voice from below and Bob ran down the steps recklessly. Had old Snooks discovered the ruse? It was Sally pounding on the side door, fastened inside with a spring lock. She also fell inside as Bob opened it.

"Let me ring," she cried and darted past him up the steps. Just as Beany Woods fell exhausted to the floor and released the rope, Sally sprang over him and threw her full weight on the rope, and again the bell pealed out with vigor. Slowly the Presbyterian and Baptist bells grew fainter and the ringing became less regular. Finally the Baptists stopped altogether. A few seconds later and the Presbyterian boys gave up in pure exhaustion. The Methodist bell rang definitely a few times more and then it too grew silent as victory was assured.

Triumphantly the boys collected in the square at the courthouse.

"Well, we did it, anyhow," they said, proudly. "Old Snooks never came near us."

"Sally did it," said Bob proudly. "She got old Snooks away from the church. He was right there waiting for us. And she came back and finished up. How'd you do it, Sally."

"Well, I fell down in front of the church and yelled for help," said she with great gusto. "Mr. Snooks came running and asked me what was the matter and I never said a thing—just groaned. And he carried me all the way home and knocked on the door, and father came and let us in and they carried me up to bed. I winked at father while mother was after the hot water bottle and I came out of the window again.

"Sally saved the day," said Sammy Moran. "She ought to have the prize. What is the prize, Bob?"

"The prize will be given at recess tomorrow," said Bob with dignity and led Sally home.

"It was great, Sally," said he as they approached the house, "but what will mother say?" Uneasiness came to both of them and they slipped up the front steps and rather timidly tried the door.

"Why, Sarah," she said. "Do you think that was very kind? Do you know how I worried about you?"

"I never thought of it, mamma," cried Sally, running to her mother and throwing her arms around the ample waist. "Truly I didn't mean to distress you"

"She did it for me," said Bob. "It's all my fault. I oughtn't to have let her go."

"I'd like to know how you could help yourself," sniffed Sally.

"Miss Lane," said Willie Livermore in the speech of presentation the following morning at recess, "it gives me preat pleasure to present you with this prize. It is not the prize which was first prepared, which was Bob's baseball, but it seemed to us that you won and you should have the prize. We all clubbed together and herewith present you with these," and he handed the embarrassed girl a box.

She untid the string, removed the paper. "Oh! Oh! The very thing I've wanted and didn't get Christmas. Skates! Skates!" she cried in ecstacy.

Making a New Year.

Dear Children of the Corner: I wish for you all a very Happy New Year. I like to think of New Year's as made up of days of sheets of blank white paper. Each day we write on one, and at the end of the year they are bound together in a big book; some call this a diary, but it is our history. We are writing on the last few sheets of 1917; four more finishes the year and then we shall begin on a big new pile, spotless and white as snow. What are we going to write on the pages of 1918?

Shall we fill it up with complaints and self pity; or shall we fill it with cheer and kindness? Shall we write hate and mean thoughts over the whiteness, or shall we put sweet temper and generosity and love in it?

How would it do to make a resolution for all Corner Cousins, something like this?

For 1918 we will make the first day or the year a day of good deeds, good words and good thoughts, and we will try to make each day better than the day before.

We will be thoughtful of others, mother, father, brothers, sisters, friends, neighbors and those in need, think first of them and then of ourselves. We will do our duty by our country in every way we can, and be loyal and true to our flag whether our part be small or great.

May the new year be a happy one for all of our cousins, overflowing with health, joy and all other good things, is the wish of your

LOVING AUNT NELLIE.

Making Washcloths for the Red Cross.

Dear Aunt Nellie: It is a long time since I wrote to you, so I thought I would write now. I wrote two letters to the Children's Corner before. I enjoy the letters in the Corner very much. I read them every time the paper comes. I have found a twin since I wrote to you. It is a girl. She is 11 years old and she is in the sixth grade at school. She has light hair and blue eyes. She lives in Tolt, Wash. I have one sister and three brothers. My sister's name is Inga and she is 12 years old. My youngest brother's name is Oswald and he is 17 years old. My oldest brother's name is Olaf and he is 22 years old. My other brother's name is John and he is 18. We live on a 40-acre farm and we are renting 40 acres, so we have 80 acres altogether. We have almost 20 cows, two horses, two sheep and a dog. We have a car, too. I am making wash cloths for the Red Cross. My mother made handkerchiefs and towels. Some of the girls in our school are making wash cloths, sweaters, scarfs, gunwipers and clippings for pillows. The boys help in some of them, too. We had two days' vacation during Thanksgiving and a whole week vacation at Hallowe'en. We had a Hallowe'en program, but we did not have a Thanksgiving program. I will write again.—Esther Dale, Route 1, Box 70, E. Stanwood, Wash.

Cousins Should Get Others to Write.

Dear Aunt Nellie: This is my fourth letter to the Corner. I am 9 years old. My birthday is April 11. My hair is brown. I have brown eyes. A girl wrote to me. She is 9 years old. Her birthday is the 19th of December. I have answered her letter. I wish we could only have one whole page for our Corner. I think it would be a good plan for the cousins to ask some of their friends who are in the same town to write to the Corner. I wish Aunt Nellie would write more letters. I enjoy them very much.—Beulah Shaw, Grandview, Wash.

Fun to Make Baskets.

Dear Aunt Nellie: I have been reading the letters for a long time, so I thought I would write to the Corner. I live on a 30-acre farm. I would not like to live in the city. I have lived on the farm all my life. I go to Lincoln school. I have a mile to go to school. My complexion is light. I was 9 years old June 21. I am in the fourth grade. Have I a twin? I carry in wood, run errands and wipe the dishes for my mother. My teacher taught my sister and me how to make baskets. It is fun to make baskets. We had a Christmas program in my school. I have one sister and two brothers. Their names are Elvera, Juno and Melborn. There are six in our family. We have a piano. I have taken nine music lessons. I can not play very much. We will start next summer to take music lessons again. We do not take any lessons when it is school time. In the summer we can have lots of fun by our home. There is a ditch that runs past and we have fun playing in it. I go to Sunday school. It is about half a mile to go. I go just about every Sunday. I will write some more letters later. Now I will close. I hope to see my letter in print.—Florence Peterson, R. F. D. 5, Box 43, Mount Vernon, Wash.

Thelma Is a New Corner Cousin.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it won't be the last. I read the Corner most every time. I am light complected and have light hair and blue eyes. I am 10 years old. My birthday was October 4. I go to school and am in the fourth grade. There are 35 pupils in my room. There are 12 pupils in my class. My teacher's name is Mrs. Chapman. I like her very much. I have a mile to go to school. My drawing teacher is Miss Paden. I have five subjects at school. They are reading, arithmetic, language, geography and spelling. I have four brothers and one sister. My brothers' names are Evan, George, Lewis and Kasper. My sister's name is Clara. We have two dogs. Their names are Sport and Rex. Sport is 6 years old and Rex is almost a year old. We have 22 cows. We have four horses. Their names are King, Nancy, Tom and Nellie. Have I a twin? May I be one of the cousins? I would like to join very much. I guess I'll have to quit for this time.—Thelma May Nordby, R. F. D. 3, Box 139, Ferndale, Wash.

Loves to Go to School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 7 years old. I am in the third grade at school. Our teacher's name is Mr. Allison. I love to go to school. The school is not far from our house. We have a pup. He is very playful. His name is Rover. We have five cows. Their names are Spot, Pansy, Cherry, Daisy and Bessie. We have a kitty. Her name is Pussy. We have an old cat. Her name is Muff. There are 29 pupils in our school. We have about 40 chickens. We have three heifers. I have one brother. His name is Archie. I have one sister. Her name is Theresa. We live out in the country. I help my mother. I carry in wood and sometimes wipe the dishes for her. The store is two miles from our house. My brother and my sister are in the sixth grade at school. My brother is 13 years old and my sister is 11 years old. I was born July 9, 1910. I would like to see my letter in print. Have I a twin? If I have I would like to hear from her.—Onida Wilson, Grays River, Wash.

Finds the Eighth Grade Easy.

Dear Aunt Nellie: It has been a long time since I wrote to the Children's Corner and this is the second time I have written. I live on a 500-acre ranch and wouldn't trade with any city girl. My height is five feet and I am 13 years old the 15th of March. I am in the eighth grade and find it very easy. My teacher's name is Lyla Strong. She rode one of our saddle horses out in the field one night and fell off him. She fractured her ankle. We have been having vacation on that account. I have blue eyes and brown hair. If I have a twin I would like her to write to me. May I be a cousin to the Children's Corner. It is snowing here today and I may get a sleigh-ride yet. I stayed all night with a girl friend the other night. I rode over there horseback. It was three and one-half miles. I will write more next time.—Retta Gray, Box 18, Govan, Wash. (You are a cousin, Retta, since you have written to the Corner. We are glad to have you write and hope to hear from you again soon. Aunt Nellie.)

A Basket Supper at the Schoolhouse.

Dear Aunt Nellie: My papa takes the Farmer I have been reading the letters of the Children's Corner. I am very much interested in them and I thought I would write, too. I live on an 80-acre farm four and one-half miles from Everson. On our farm we have four horses, one of them is a colt. We have eight milching cows, two heifers and four calves. For pets we have two dogs, one kitten and some rabbits. I have one brother and four sisters. My brother's name is Cecil. He is 16 years old. My oldest sister's name is Bernice. She is 14 years old. Thelma is 11 years old. Edna is 6 and the baby will be 1 month old the 6th of December. Her name is Phyllis. I am 13 years old. I walk two miles to schcol. I am in the seventh grade. My teacher's name is Theresa Stone. We are going to have a basket supper at the schoolhouse soon.—Myrtle Clinard, R. F. D. Route 2, Everson, Wash.

Likes to Live on a Farm.

Dear Aunt Nellie: This is my first leter to the Corner and I hope it will not be the last. I am 12 years old and in the sixth grade. My birthday was the 6th of October. Have I a twin. If I have I would like to have her write to me. I will answer her letter. I go to the Swantown school. It is two miles from where I live. Our teacher's name is Mrs. Holland. There are 29 pupils in our school. We live on a farm of 40 acres. I like to live on a farm.—Elsie Youngsman, R. R. 2, Box 41, Oak Harbor, Wash.

News for Breeders

At the annual meeting of the American Berkshire association, December 4, at Chicago, during the International stock show, C M. Talmadge, proprietor of Silver Birch Farm at Newport, Wash., was elected a director of the association. This is the first time a western man has been elected to that position and the Berkshire breeders of the northwest are to be congratulated.

George A. Morse of Talent, Ore., in 1913, purchased the Guernsey bull, Ruda's Maxima, from the Gene Duluth Farm of Minnesota. The dam of this bull, Ruda B., had a record of 856 pounds of butter and his breeding throughout is of the best. Mr. Morse also purchased Arabelle's Beauty, from E. L. Thompson of Portland. She was second at the Pacific International and was beaten only by the cow that was grand champion at the National Dairy show at Chicago. Mr. Morse has only a few purebred Guernseys and reports a ready sale for bulls. He has a herd of very high grades and produces rich colored milk which is eagerly sought for by the Medford trade.

Mr. Morse also breeds a few Percheron horses, most of his stock being taken by A. C. Ruby, at fair prices. He has one mare that has several times been high up in the many at the state fair.

In 1902 G. T. Billings of Ashland, Ore., built a silo 12x26 feet, of 2x4s, planed on one side and edge. He has filled the silo every year and it now holds a nice lot of corn silage. No regular carpenter worked on its erection and getting the hoops properly placed, Mr. Billings says, was a hard job for the men who built it. But it has stood up and very little silage has spoiled. It stood outdoors for several years, but is now under roof. Mr. Billings does not recommend this type of silo to others, but does say it shows the value as well as the possibilities of the silo. His son, Ralph Billings, last spring erected the first concrete silo in Jackson county. He filled it partly with first cutting of alfalfa, the balance with corn.

Ralph has a herd of six purebred Jersey cows, a herd sire and some grades. The Billings have been breeding Jerseys for over 20 years and are well suited with them. The foundation stock is from Ladd Farm Brown Bessie stock and the present herd sire from Henry Stewart. H. A.

Sheridan Star.

The above is a good picture of Sheridan Star, one of the good Jersey cows in the herd of Ward Hull, Ballston, Ore. Sheridan Star has a Register of Merit record of 12,811 pounds of milk and 561.1 pounds of fat, or 660 pounds of butter. She is on test again and is sure to produce over 700 pounds of butter, if no accident occurs. Mr. Hull has five others on test, all doing fairly well. His present herd bull, St. Mawes' Coffee Violet Lad, for which he paid $770 at auction, is growing and promises to make a great bull. H. A.

HOG MEN OPTIMISTIC.

Future Prospects Show Promise.

A note of optimism ran through all the remarks at the Swine Breeders' annual banquet at the Portland hotel, November 20. Dean Iddings of the Idaho university, in calling the meeting to order, said the tide had turned and the future looked brighter than at any time in the last two years. He introduced E. E. Faville as toastmaster. Hon. Thomas Brunk, who judged the hogs, was the first speaker. He expressed surprise at the exhibits from other states and said he had never seen finer specimens than those at this show.

W. H. Daughtrey, president of the Portland Union Stock yards, elicited hearty cheers when he said there was nothing of greater importance in the winning of this war than hog breeding.

Richard Gilman, buyer for the Union Meat company, and R. L. Clark of the Bodine & Clark Commission company both predicted a still higher hog market.

Paul Clagstone, secretary of the Northwest Live Stock show at Lewiston, said we are going to make these two great shows still greater. He said the west will raise the food that will help win the war.

Professor E. L. Porter, head of the animal husbandry department at the Oregon Agricultural college, who put on the educational exhibit at the Pacific International, said hogs are the greatest animal on the farm to utilize waste. Every farm should grow a few hogs—not too many—thus helping in this critical time.

Other speakers were J. D. Miles of Livingston, Mont.; Ed Schoel, Suver, Ore.; Robert Nelson, North Yakima, Wash.; William Hislop, animal husbandman, W. S. C.; Judge Scott, Salem, Ore.; C. N. McAlister, the "hog booster"; R. W. Hogg, Salem, who managed the hog sale at the show; Colonel J. W. Hughes, Forest Grove, Ore.; R. A. Blanchard, agriculturist of the Cattle Loan bank, North Portland; Colonel George Gue, North Yakima; W. L. Tenant, secretary Spokane Interstate fair; Ray J. Fox, Lyons, Ore.; Herbert Willard, Dayton; E. A. Rhoten, Salem, Ore., and others.

All the old officers were reelected, as follows President, C. M. Talmadge, Newport, Wash.; vice president for Oregon, R. W. Hogg; for Washington, J. A. Simonson; for Idaho, Dean Iddinge; for Montana, J. P. Mulloy. E. S. Sweet of Grangeville, Idaho, was elected on the executive committee. H. A.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Dec. 22.—Scantiness of offerings brought about an advance in grain prices today, notwithstanding that for a while the market showed weakness, owing to favorable weather and to prospects of a larger movement of the crop. The close was firm, 1-4c to 7-8c net higher, with January $1.25 7-8 and May $1.23 1-2 to $1.23 5-8. Oats finished 1-8c to 1 1-8c up, and provisions at gains of 12c to 25c.

At first the bears in corn appeared to have the advantages, as weather conditions, together with an improved outlook on the railroads, pointed to larger receipts on Monday. Besides, the removal of the war board embargo east of Chicago had not altered the fact that individual embargoes still existed on various eastern lines. Right from the outset, however, selling lacked volume, and when week-end adjustment of trades set in shorts were compelled to bid up prices, especially in the last hour.

Persistent buying on the part of commission houses absorbed the surplus offerings of oats. Despite liberal supplies in the country, receipts here showed no important gain.

Gossip that foreign government meat orders had been let to leading packers gave strength to provisions. In addition, it was said, hog arrivals next week would be relatively meager.

Sheep—Receipts 16,000; weak. Wethers, $9@13; lambs, $12.50@16.35.

At Portland.

PORTLAND, Ore., Dec. 22.—Cattle steady; receipts 197. Medium to choice steers, $9.35@10; good to medium steers, $8.50@9.40; common to good steers, $7@8.15; choice cows and heifers, $6.75@7.60; common to good cows and heifers, $5.50@7; canners, $3@5.50; bulls, $4.50@6.75; calves, $7@9.50; stocker and feeder steers, $6@7.85.

Hogs steady; receipts 340. Prime light, $15.35@15.50; prime heavy, $15.35@15.50; pigs, $13.50@14.50; bulk, $15.35.

Sheep steady; receipts none. Western lambs, $13@13.50; valley lambs, $12.50@13; yearlings, $12@12.50; wethers, $11.75@12.25; ewes, $8@10.

Portland market on shorn sheep 2½ to 3 cents under quotation.

Spokane Stockyards Saturday.

Hogs—Receipts 73; market steady. Prime light, $15.35@15.50; prime heavy, $15.35@15.50; pigs, $13.50@14.50; bulk of sales, $15.40.

Cattle—Receipts 86; market steady. Best beef steers, $9.25@10; good steers, $8.25@9; common to good steers, $7@8; best beef cows, $7.30@8.25; good cows, $6.50@7.25; ordinary to good cows, $5.50@6.50; canners, $3@5.25; best heifers, $7.75@8.50; bulls, $5@6.75; calves, $6.50@8.50; stocker and feeder steers, $5@7.50.

Sheep — Receipts none; market steady. Prime lambs, $13.25@14; good lambs, $12@12.75; prime yearlings, $11.50@12.25; prime wethers, $11.25@12; best mutton ewes, $8@10.

Portland Market.

PORTLAND, Ore., Dec. 22.—The demand for turkeys proved to be much in excess of the supply. As a consequence the price climbed to 33 cents at the close of the week. City retailers got what they needed, but many shipping orders, especially from Seattle, were unfilled. A retail price of 5 cents over the wholesale price was recommended by the food officials and most retailers acted accordingly.

There was a good supply of dressed geese, which sold at 22 to 24 cents. Dressed ducks were scarce and brought 26 to 30 cents, according to quality. Live poultry sold unusually well at firm prices. Country dressed meats were steady.

City creameries, because of light receipts of cream and butter, and influenced also by higher prices in other markets, raised print butter prices 4 cents to 52 cents in plain wrappers and 53 cents in cartons. Country creamery also moved up with cube extras selling at 49@49 1-2 cents. The buying price of butterfat was lifted 4 cents to 57 cents, a record mark. With condenseries bidding for all the milk they can get, there is not likely to be relief for butter consumers soon.

Eggs have accumulated in the last few days and prices are lower all around, with indications of a further drop after the holidays.

The potato market continues weak. The top buying price is $1.25. Oregon Burbanks are jobbing in a limited way at $1.25 to $1.50 and Yakima Gems at $1.50@1.75.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $57 per ton.

Millstuffs—Carloas: Bran, $29.50; shorts, $31.50; middlings, $38.50; less than carloas and mixed cars, 50c more.

Barley—No. 1 feed, $55.50; brewing, $57.50; rolled, $61@62.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24; grain $24.

Eggs—Oregon ranch, case counts, 45c per dozen; candled, 48@53c.

Poultry—Hens, 18@20c; ducks, 20c; turkeys, live, 23@25c; geese, 14@18c.

Butter—City creamery, prints, 52@53c per pound; cubes, extras, 49@49 1-2c.

Cheese — Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 15 1-2@16c; pork, 17 1-2@18c.

Hops—1916, 13@15c; 1917 crop, 16@20c.

Potatoes—Oregon, buying price, $1@1.25 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 55@60c.

Beans—Buying prices: Oregon white, 9@9 1-2c; colored, 8@9c.

Portland Wheat.

PORTLAND, Ore., Dec. 24.—The feature of the week in the cereal trade was the announcement by the food administration of fixed prices on mill feed. The new list is a cut of $3 to $4 a ton from the previous mill quotations and represents a decline of $7 to $8 from some of the prices brokers have been getting. The fixed prices are based on wheat costs and will not vary during the remainder of the season, unless some means can be found further to reduce them. The food administration order names the following prices: Carloads, bran, $29.50; shorts, $31.50; middlings, $38.50. Less than carloads and mixed cars are 50 cents a ton more. These prices are at mill doors.

Oats and barley have continued strong, but speculation has slowed down as it is known the administration is considering a plan to fix prices for these cereals, as is done with wheat and mill feed.

Seattle Market.

SEATTLE, Dec. 22.—Holders of potatoes in both eastern and western Washington have assurances from the selling end in this city that prices can get no lower, based on supply and demand and costs of production until late in the spring. Business done through the week in potatoes has been at steady to stronger levels.

There is only a small holding of Yakima graded gems on the Seattle market, jobbers handling the trade as near as possible on quick cleanups. Mild temperatures have had much to do here with the light sale of baking gems to date, and the absence of snows in the mountains to the seasoned jobbers indicates a mild winter.

Fresh ranch eggs are steady at 53@54c, with bid prices to producers at 47@48c.

SELLING PRICES.

Feed—Scratch feed, $76 per ton; all grain chop, $64 per ton; oats, $64 per ton; rolled oats, $65.50 per ton; wheat $74 per ton; bran, $35 per ton; shorts, $38 per ton; soy bean meal, $65 per ton; whole corn, $81 per ton; cracked corn, $83 per ton; alfalfa meal, $36; chick feed, $80 per ton; barley, $63.50 a ton; all grain chop, $67 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $29@30 per ton; double compressed, $40@41 per ton; wheat hay, $29 per ton; Puget sound, $30@31 per ton; straw, $15.

Butter—Washington creamery extras, cubes, 52c per lb.; do bricks, 53c per lb.

Eggs—Fresh ranch, 53@54c per doz.

Onions—Yakima, $2.25@2.50 per cwt.; Oregon, $2.75 per cwt.

Potatoes — Puget sound, $1.25@1.35 per ton; eastern Washington, $1.50@1.60 per cwt.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 47@48c per dozen; pullets, 40c dozen.

Butterfat—54c lb.

Poultry—Live hens, fat, over 4 lbs., 23c per lb.; 4 lbs. and under, 20c; old roosters, 15c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 15c per lb.; spring chickens, live, fat, 20c per lb.; hens and young tom turkeys, dressed, 30c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 18@19c per lb.; heavy, 12@15c per lb.

Veal—Fancy, light, 14@16c per lb.; heavy, 9@13c per lb.

Hides—Salted, 16c per lb.; flint-dry hides, 30@31c per lb.; salt kip, 16c per lb.; green hides, 13c per lb.; green calf, 25c per lb.; dry calf (under 5 lbs.), 34c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 10c per lb.; dry full wool sheep pelts, 42@46c per lb.; salt bulls, 13c per lb.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $1.50 cwt.; sweet potatoes, $4.25.

Apples—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.85@$2.25; Winter Bananas, $2 box; Jonathans, $1.25@1.60 box; Wageners, $1.25 box; Rome Beauties, $1.25@1.60 box; Spitzenburgs, $2 box; King Davids, $1.25@1.35 box; Grimes Golden, $1.35@1.65 box; Staymen Winesaps, $1.75@2 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 45c lb; Gold Leaf, 49c lb; Better Butter, 45c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss 38c lb; Young Americas, 27c lb.

Eggs—White filler, guaranteed, $13 case; selected storage, $12.

Live Poultry—Hens, 18c lb; broilers, 18c lb; old roosters, 11c lb; ducks, 15c lb; geese, 12c lb; turkeys, 22@25c lb; local turkeys to retailer, 32c lb.

Dressed Poultry—Hens, 18c lb; broilers, 20@21c lb; old roosters, 11c lb; ducks, 17c lb; geese, 14c lb; turkeys, 27c lb.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 15c; salted cured, 17c; green bulls and stags, 12c; salted cured, 15c; kip, 15 lbs. to 25 lbs., 20c; calf skins up to 15 lbs, 28c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 1 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

Seattle Wheat.

SEATTLE, Dec. 22.—Developments this week through discussion by millers and grain dealers of federal and state grading rules, as presented at the last hearing before the representative of the federal bureau of markets at Washington indicate that many of the problems of easy marketing of Washington wheat in the east have been solved. Dealers are convinced that smutty wheat, which is 42 per cent of the Washington and Oregon crop, will go on sample.

The desire of the Puget Sound dealer is not only to stop the practice of growers of shipping smutty wheat here and the good stock east, but to put a steadily increasing premium on efficiency and skill in wheat produced and so ultimately stamp out smutty wheat.

Millers here claim that the more generally use of blue vitrol solution in preparing the seed wheat in preference to formaldehyde in more general use will go far toward killing smut which, in their opinion, is causing the loss of thousands of dollars annually to Washington farmers. They take the position that no matter how much cleaning is applied to smutty wheat, it can not be made good, as the effects of smut runs through to the heart of the kernel. Experiments conducted on wheat land in the same territory where soil conditions were exactly similar shows by reports received by millers this week that where seed was prepared in vitrol solution and another in formaldehyde, there was a wide difference in the quality.

Puget Sound millers are preparing to ask eastern states, like Minnesota and Illinois, where Washington wheat is sold, to pass grading legislation carrying the Washington dockages in order that when received this wheat will be accepted on the basis of inspection at the original shipping point.

Dealers of Seattle have been notified by A. H. Hankerson, local agent of the Food Administration Grain corporation that no wheat shipments can be made to mills not located in this zone except as against approved inter-office requisitions, the zone covering Washington, Oregon and Idaho. In accordance with these regulations shipments can not be made until the shipper is in receipt of instructions from the corporation offices giving details of the requisite number, the quantity and variety to be shipped and the name of the mill in whose favor it is issued.

Butter and Eggs.

PORTLAND, Ore., Dec. 22.—Butter—Prints, extras, 52@53c; cubes, extras, 49c; prime firsts, 48c; dairy, 34c.

Butter fat—Portland delivery No. 1; sour cream, 57c.

"The Barrier" By REX BEACH

(Continued from page twenty-two.)

throat, a cry half of amazement, half of triumph.

"Let me go! Let me go!" She struggled to free herself, but he held her in a viselike grip, while he peered closely at a blemish well down upon her back. Then he left her slip from his grasp, and seized with terror, she staggered away from him. He was leaning heavily with both hands upon the table, his face working, his head drawn down between his shoulders, his thin lips grinning, his whole manner so terrifying that she shrank back till she brought up against the bark wall. She turned and made for the door, whereupon he straightened up and said in a queer, commanding voice:

"Wait—don't go! I—I—you—" He licked his lips as if they were dust dry, passed an uncertain hand across his beaded brow, and, raising the waterpail beside the door to his mouth, drank heavily in great, noisy gulps.

'Let me out of here!" the girl demanded, imperiously.

"Don't be scared," he said, more quietly now. "You must excuse me. You—you gave me an awful fright. Yes—that was it. Don't worry. I didn't mean any harm."

"You hurt my shoulder," she said, almost ready to cry. "And you tore my dress," she added, angrily—"my fine dress. Are you crazy?"

"You see, it's like this, that name of Merridy and that ring—well, the whole thing was so startling, I—I went off my head. It came so sudden, and I thought—I thought—it don't matter what I thought, but I'm sorry. I'll apologize—and I'll get you a new dress, a whole lot of dresses, if you like." This seemed to amuse him, and he began to laugh silently.

His first impulse had been to tell her everything, but his amazement had renreded him speechless, and now he was thankful for it. Following his discovery of her identity, he had been stricken dumb, staring at her lkei one demented; then, as he was about to explain, his mind suddenly grasped the significance of this revelation and the advantage it gave him over his enemies; a plan began to unfold, vague at first, its details not worked out, but a plan whereby he could by keeping silent use this knowledge to serve his vengeful ends. In an instant his vision cleared and his brain became active and alert, like that of a man brought suddenly under the stimulus of strong liquor. Care must be exercised—she must not learn too much—for if she suspected the truth she would go to her soldier lover at once, and no power on earth could hold her back. That would block the vengeance that he saw shaping in the dank recesses of his distorted brain.

First, and above all, he must get the girl away from Flambeau.

"I went clear off my head," he heard himself saying, "at that name of Merridy, that ring, and all. Why—why, I thought you might be the missing girl I told you of—you remember, that day up on Lee's Creek—so I had to see; but, dear me, I should have been more considerate—I should have explained. The trouble is I'm a nervous man, and I get impulsive streaks on me sometimes that I can't control. I'm sorry I spoiled your dress, but I'll get you another—you bet I will."

This explanation of his strange behavior seemed plausible enough to banish all personal fears from Necia's mind. Indeed, Stark had now become so gentle and apologetic in his demeanor that her woman's curiosity overcame her instinct to flee, and she ventured the question:

"So you really thought I was that other girl?"

"I did for a minute. The mother was a—a—friend of mine, and so—I lost my head. But I'm all right now, and if you'll overlook my roughness we'll go back to your troubles.' '

These last few moments had driven her own worries from her mind, but he was bent on recalling them, and so continued, cautiously:

"You were saying that you thought you'd go away. I think that's a good plan, and you'd be wise to do it for more reasons than one. It will give you time to think it all over and know your own mind—"

"I know my mind now, and yet—I don't want to go away."

"—and it will give Burrell a chance to prove himself. He'll either show that he has got to have you at any cost, or that you are right in your decision. If the first should happen, you can come back to him; if the last—why, it will be better for you, anyhow. As long as you stay here neither one of you can see clearly."

She was touched by his interest, and realized the force of his argument, which, strange to say, seemed to second her own thoughts; yet she hesitated.

"I want to help you—I'm going to help you—because I've got an interest in you like you were mine." Again he betrayed that strange, mirthless amusement.

"There is no place for me to go," said Necia, blankly, "except the Mission, and I have no way of getting there."

"Don't you worry. I'll furnish the means, and you'd better go tonight"—she flinched—"yes, tonight; there's no use prolonging your agony. I'll get a boat ready and send a trusty man with you. The current is swift, and if he rows well you can make it by tomorrow evening. That's only one night out, and I'll put some blankets aboard so you can wrap up and have a sleep."

"I feel as if I'd never sleep again," she sighed.

"Now, now, this will come out all right yet. I'd take you down there myself, but I've got to stay here. I've got work to do. Yes, I've sure got work of importance ahead of me."

"I must go back and get some clothes," she said. At which he would have demurred had he not seen that she could not travel in her present condition.

"Very well. But don't let anybody see you."

"Of course not."

"It's getting late, and your folks will be abed." He looked at his watch. "Midnight!" Be here in an hour, and I'll have the skiff ready." The light of sacrifice was in Necia's eyes, and her cheeks were blanched with the pallor of a great resolution. She did not stop to reason why or how she had been led to this disposal of her future, but clutched desperately at Stark's plan of rescue from her agonizing predicament.

"I'll be here in an hour," she said, simply.

He let her out, closed the door after her, and locked it; then, drawing a deep breath, he raised his clenched hands above his head, and gave a great sigh of exultation. Next he took out his six-shooter and examined it carefully. The shells did not suit him, so he filled the gun with new ones, loosened the three lower buttons of his vest, and slid the weapon inside his trousers band; then, facing the direction of Gale's trading post, he spoke aloud.

'I was a long time coming, Gaylord, but I'm here, and I've got you where I've wanted you these 15 years—yes, and I've got you, too, Burrell! By God, this is my night!"

His lithe body became panther-like in poise, his bearing that of the meat-eating animal, and his face set in a fierce, exultant cruelty as he blew out his light and left the cabin.

(To be continued.)

Sugar for the Allies.

Much of the sugar used in England, France and Italy before the war came from Germany and Austria. That the sugar crop in these two enemy countries has decreased materially is of little import so far as the need of our allies is concerned. England, France and Italy need sugar and need it badly. Much of this year's world crop is not available because of its remoteness from Europe and because shipping space is not available. The burden in this case falls heavily upon the western hemisphere and especially upon the United States and Cuba.

$75 AN ACRE
BUYS 10 ACRES OR MORE
of our Famous
THURSTON COUNTY
MEADOW LANDS.

The Governor Stevens' old homestead, just opened to settlement, in small farms, on easy monthly payments; located at Belmore, Thurston county, Wash., on Northern Pacific road, 5 miles from Olympia, and only 20 miles from big army post that buys immense quantities of farm produce at good prices.

The soil is red clay loam and black beaver bottom of exceptional fertility; will produce big crops of all grains, grasses, vegetables and fruits common to this mild climate. Excellent hog raising, fruit and truck gardening district.

The advantages include daily rural mail delivery, free bus service for school children; good daily train service, with station almost on the land; good roads; running stream crossing many tracts, and fine fresh water lake nearby.

Write at once for particulars; number of tracts is limited.
A. H. REID & CO.
New York Block, Seattle, Wash.

GOING — IRRIGATED ALFALFA AND stock ranch of 111 acres; gross income $6000; situated on the bank of the Yakima river; ideal for all kinds of stock; properly cultivated, will raise 100 bu. corn and 10 tons of potatoes to the acre. Horses, cows, registered $1000 Holstein bull, Berkshire hogs, chickens, farm implements, etc.; eight-room house, barn, silo, hog and chicken houses. This ranch is second to none in the Yakima valley. POULTRY FOR PROFIT

The world is facing a most serious shortage of meat. Because of this we believe it will pay you to build up a good, big flock of poultry this season, with foundation stock from some of the extra good strains you will find offered through our advertising columns from week to week.

It Doesn't Pay to Keep "Scrub" Chickens Nor "Boarder" Cows

When buying breeding fowls, therefore, buy good ones. Apply the same principle when buying hatching eggs or baby chix. Watch our poultry ads this season, and order early, is our advice.
